RIVER NEWS.

The changing of the channel of the

Missouri river at Weston, enabling steam-

boats to land immediately at the town, has

greatly revived the hopes of the citizens

there in the future prosperity of the city.

The following are given as the dimensions

of Captain DeHaven's new boat, to be

built at Jeffersonville: The length of the

boat will be 330 feet length over all, 365

feet; breadth of beam, 63 feet, with over

all, 107 feet.

Passing through the canal at Louis-

ville, Tuesday evening, the snag boat

Patrolled to signal the men at the draw

in time, and she ran against the bridge,

knocking down both of her chimneys.

The ship carpenters and caulkers at

Madison, Indiana, have plenty of work to

do, but can't make full time of late on ac-

count of the oppressive weather. Some of

the men while working at the draw, were

knocked down by the mercury in which at

once ran up to 150 degrees.

Under the act of Congress of July 25,

1866, there has been, and will be assigned

every merchant vessel of the United States

an official number to be carried on the

stern of the vessel, in depth, and not less

than three inches in length. The num-

bers to be plain black Arabic.

A late St. Louis exchange says: The

stern of the vessel, in depth, and not less

than three inches in length. The num-

bers to be plain black Arabic.
