Steam Boiler Inspection. The report of the Hartford Steam Boiler Inspection and Insurance Company for to Mr. Young, the latter remarked that, on returning to Congress, he might hear kinds developed by competent inspection, that may well attract the particular attention of every person using steam. These defects consist of fractured plates, furnaces out of shape, incrustation, scale, corrosion, both external and internal, water gauges out of order, safety valves out of the use of steam unsafe. With competent inspection all defects are shown in time to prevent disaster. Is it a matter of wonder that explosions take place when we state that in this report no less than twelve boilers are spoken of as being used without steam-gauges of any kind? The report has some judicious remarks which we copy: We are frequently asked what is to be understood by "furnaces out of shape?" We suppose that few persons familiar with steam boilers fail to under-

stand this. It is well known that the furnace of a steam boiler is subjected to intense heat, and consequenty the iron is liable to excessive expansion. Where injudicious firing is done this is especially true, and we not unfrequently find sheets contorted, their joints badly strained, and a cemplete overhauling absolutely necessary for safety. Injudicious firing is a very prevalent evil. Where coal in large lumps is piled upon the grate nearly or quite to the crown sheets, the furnace cannot be otherwise than seriously injured. Formerly such practice was regarded economical, but it is now well understood that the most economical fires are those where the coal is small and evenly scattered over the grate. In short, thin fires, more frequently fed. Objection may be made to frequent feeding, on the ground that fire sheets are injured by a current of cold air impinging against them. The time required to feed a fire, managed as described above, is very short, while in the old-fashioned way, the doors must be kept open some minutes to remove the slag that has accumulated on the grate bars, and further, the draft is always more or less impeded. Internal corrosion is a difficulty frequently met with; it is deceptive and dangerous, and can only be detected by careful internal examina-We have found sheets badly defective in this respect, when the exterior of the boiler appeared sound and in good condition. This difficulty arises from impure water, and is common to a considerable extent all over the country. We are informed by the English companies that it is common there, especially in the mining districts. We have recently re-ceived from them photographs of plates, water gauges, it will be seen, are far from infallible; they are valuable as a visible means of indicating the height of water in a boiler, but they should not be relied on to the exclusion of guage cocks. What we would say to engineers is, look well to all the appliances and attachments of your boiler, they all need your constant attention. It is neither guaranteed nor

reay Times.

Impure Water. Few of us are aware of the deleterious and showed fight, threatening that he effects of impure water, or how prone could make hash of any brother who water is to imbibe the impurities of the air. Many of us think if the water is right and benefits of his entrance. He clear and cold it must be perfectly pure, though it has stood in a close bedroom twenty-four hours; but this is far from true. If a nitrher of water is set in of water can contain a great amount of ammonia and carbonic acid gas; and its capacity to absorb these gases is nearly doubled by reducing the water to the temperature of ice. This plainly shows us that water kept in a room over the pass-word. Now that the word is contained to put him out, and with a Good Templar's grip upon the collar of his coat and the most worn part of his pants, he was ejected. This morning he made himself scarce, fearing that he would be arrested on a warrant for grand larceny—stealing the pass-word. Now that the word is away the next morning. It also teaches proprieties of air and water, two of the most important elements of our nature.

A MALAY FUNERAL.—It appears that there are in New Orleans a few families of Malays, and that they observe the cusof Malays, and that they observe the custom of their native country and race.
They bury their dead at night, and slaughter upon the grave some animal that they observe the custom of their native country and race.

The military harbor just inaugurated by the King of Prussia, at Wilhelms-haven, presents to view five same than the country and that they observe the custom of their native country and race. slaughter upon the grave some animal the deceased loved in life. At the funeral of young girl, which took place on the life, and an array of dry docks for ordinary and iron-clad vessels. As you applied the life, and an array of the life, and an array of the life, and an array of the life, and a life, and night of the 27th ult., the oldest man proach by ship, you first find yourself in among them officiated as priest, in the an artificial basin, flanked by immense among them omctated as priest, in the absence of a regular one, and preceded, on foot, the cortege which conveyed the remains to the grave. The tomb was ansiointed, and a fish and some cake were nointed, and a fish and some cake were placed in it, with certain solemn ceremonials. A bird was also killed and laid on the breast of the deceased, while all the relatives and friends passed by the coffinech one laying their hand on the head, and saying, in the Malay tongue, fareeach one laying their hand on the head, and saying, in the Malay tongue, farewell. No tears were shed, as they do not deem the transition of the saying the saying as they do not deem the transition of the saying the saying as the saying the deem the transition of the soul an event calling for grief. Upon the return home family and friends, fruit, wine and bread is served in the name of the dead.

A LONG ROPE.—A wire and hemp rope is in course of manufacture in England which, it is asserted, will be larger than any heretofore made. It will be 51 inches

Mormonism Defiant. Brigham Young was recently interviewed by a party of distinguished visitors, and the conversation is reported as

follows: As Judge Trumbull was bidding adieu ritory, and, if done, he might be sure it would be for just and good reasons. If such Federal officials should be sent here as sometimes have come, tney would be quietly and orderly put out of Utah, for

good cause. Judge Trumbull-Before you take any order, steam gauges out of order, and many other defects which tend to render to make known your grievances to President Grant. He is a just man, intending to do justice to all, but he will not permit's violation of the law to go unpun-ished. It will not be safe to molest pub-lic officers in the discharge of their duties. Brigham Young-What more will he do for us than Johnson did? Gen. Grant has removed the only officer here who was a Mormon, and for no reason save that he was a Mormon. The United States Judges who were here some time ago acted badly. I told them what I

thought of them, and they left Judge Trumbull-You will promise obedience to the Constitution and the lews of the Union?

Brigham Young-Adherence to the Union, certainly. One enactment of Congress, however, we shall not obey; that is the one forbidding polygamy. It is not right to interfere in that matter. It is much better for a man to have several wives to support, honor, and cherish them, than it is for a man to deceive one, and cast off, disown, and refuse to support her.

Judge Trumbull-That is a matter about which we must differ. We think the National Government and the States can rightfully pass laws against bigamy, and justly punish the offence. All the States make a plurality of wives a criminal offence.

Brigham Young-Yes, all the States have laws on the subject, and Utah, when a State, will have an equal right to make laws protecting polygamy. Until we came here, the subject of polygamy was not broached. It was not until we had a revelation on the subject. We think we ought not to be interfered with in this matter, as it is nobody's business but our own. We have about 70,000 people. Congress thinks we are unable to take care of ourselves as a State. When we number 300,000, as we soon shall, I think we will be admitted into the Union. Judge Trumbull concluded the dialogue remarking that the law at all events must

be obeyed and upheld. Mr. Young's remark about expelling Federal officers from the territory who do not please him, and his declaration that Mormons would not obey the laws of Congress against bigamy, created considerable sensation among the members

of the party. Trouble in a Templars' Lodge. The Rochester Democrat of the 9th reports the following under its Police head:

A warrant was procured at the police office this morning for the arrest of a young man on a charge of assault and battery. The warrant was procured by some of the dignitaries of the order of Good Templars, and arose from the conexpected that they will do your work for you, especially if left to themselves for steam guages are too common, and in the duct of a young man who surreptitiously reports for this month are several, 15 or gained possession of the pass-word, by 20 pounds out of the way. We have comwhich he gained admittance to the lodge. mented on this subject so often that we will now merely ask, How many who are now running steam boilers would be standing, his standing having been seriwill now merely ask, how many who are now running steam boilers would be standing, his standing having been seri-willing to increase their pressure 20 ously affected by sundry glasses of lager, in which he had indulged before he appeared at the lodge. His presence was at once objected to by a member, who clam-ored loudly to put him out. The wouldbe-Templar was quite put out about it, twenty-four nours; out this is far from true. If a pitcher of water is set in a fused to paralle the animal and insisted room, for only a few hours, it will absorb nearly all the respired and prespired gases in the room, the air of which will have they declined, which declination he took become purer, but the water utterly as a personal insult, and threatened to but the water is, the bust up the lodge unless he could be inigreater the capacity to contain these tiated. The initiary step was then taken gases. At ordinary temperatures, a pail to put him out, and with a Good Temnight is totally unfit for drinking purposes, and should not be used to gargle in the throat; also that a large pail of water given with a sign. The first syllable is standing in a room would help to purify the atmosphere, but should be thrown gates says "per," when the applicant says "nong," at the same time placing his hand edgwise across his upper lip with an away the next morning. It also teaches us the reason that the water from a pump land edgwise across his upper lip with an elevating motion, to which the guardian replies, "Let up!" The warrant was not morning before any of it is used. We served, the Good Templars putting in served, the Good Templars putting in practice one of their mottoes-"Charity and the friends of the young man interceding in his behalf. The complaint

> about half way another harbor for dredg ing steamers and similar craft. This leads to the port par excellence, consisting of a basin 1,200 feet long and 750 feet wide, with a smaller special basin for

boats to the right. A WONDERFUL novelty is now announce which, it is assurted, will be larger than any heretofore made. It will be 51 inches in circumference, six miles and a quarter to the depth of forty-four meters, threw (11,000 yards) in length, and will weigh up not only a large body of water, but, upward of 60 tuns. The rope consists of to the great surprise of the engineers, an innumerable quantity of small fish, each wire measuring 12,100 yards. The whole length of wire is 726,000 yards, or ed as being, on an average, half an inch whole length of wire is 120,000 yards, or ed as being, on an average, nair an inch 4111 miles; the six strands surround a in length, and resembling whitehalte, being center of 27 threads of rope-yard, made from Petersburg clean hemp, each thread measuring 15,000 yards. The thread measuring 15,000 yards. The thread measuring 16,000 yards. The wells being identical with that which forms took will finally receive a good cost of the head of the Nile, it is concluded that a composition of Stockholm tar and boiled in underground communication must exist between them and that river.

stomach to throw out the gastric juice to dissolve the food with the Pummonic Syrup, and it is made into good bood without fermentation or souring in the stomach.

The great reason why physiciars do not cure Consumption is, they try to do too much; they give medicine to stop the cough, to stop chillato stop night sweats, hectic fever, and by so doing they derange the whole digestive powers, locking up the secretions, and eventually the patient sinks and dies.

Dr. Schenck, in his treatment, does not try to stop a cough, night sweats, chills or fever. Remove the cause, and they will all stop of their own accord. No one can be cured of Consumption, Liver, Complaint, Dypepsia, Catarrh, Canker, Ulcerated Throat, unless the liver and stomach are made healthy.

If a person has consumption, of course the ungs in some way are diseased, either tubercless, abcesses, brouchial irritation, pleura adhesion, or the lungs are a mass of inflammation and fast decaying. In such cases what must be done? It is not only the lungs that are wasting, but it is the whole body. The stomach and liver havelost their power to make blood out of fo d. Now the only chance is to take Dr. Schenck's three medical cases, which will bring up a tone to the stomach, the patient will begin to want food, it will digest easily and make good blood; thea the patient hegins to grow, the lungs commence to heal up, and there is no lung disease and only Liver Complaint and Dyspepsia, Schenck's Seawed Tonic and Mandrake Pillis stre sufficient, without the Pulmonic Syrup. Take the Manurake Pillis freely in all oillous complaints, as they are nerfectly harmless.

Dr. Schenck, who has enjoyed uninterrapted health for many years past, and now weighs 2435 pounds. Was wated away to a mere skeletion, in the very last stage of Pulmonary Consumption, his physicians having pronounced his case hopeless and shand-med him to his fate. He was cured by the aforegaid mer lennes, and since his repovery many thousaxies similarily efficient have used Dr. Schenck's "preparation
