For Preserving Green Corn .- Take the corn when it is sufficiently matured for table use, remove the husk from it, and boil it nearly as much as you would if you were going to use it on the table; let it cool; cut it from the corn in the lar with stone jar, put the corn in the jar with common salt; first a layer of salt half an inch, then a layer of corn two inches; pack closely; then half an inch of salt and two inches of corn, until the jar is silled, the a cloth over the jar and set it away. It will not form a brine, and will only take up a certain quantity of salt, so that there is no danger of putting too much on it. To prepare it for use soak it over night in fresh water, remove the water in the morning, putting on it fresh water for a short time. Stew and serve

it up for dinner. Washing Finid .- This is a recipe worth \$1,000. Take one pound of sal-soda and half a pound of unslaked lime, put them in a gallon of water, boil twenty minutes; let it stand till cool; then drain off and put in a jug. Soak your clothes one night, wring them out, rub in plenty of soap, and in one boiler of clothes, well covered with water, add one teas ponful of the washing fluid. Boil half an hour, then wash them with suds, rinse, and your clothes will look splendid.—F. A. Row, Jr., in Moore's Rural New Yorker.

To Keep the Bugs Away. - Protect your Take sticks four inches long and one half inch in diameter—pine is best. Wrap one inch of one end in a piece of cotton or linen. Dip this in turpentine and stick one or two in each hill, leaving only the one or two in each nin, leaving only the parent.
wrapped part above ground. The odor
Sulphuric acid, the cheapest and most of the turpentine does the business. I have tried this four years, says the correspondent of an exchange paper, with uniform success.

A Sum Dry House.—The best dried fruit is that dried in the sun, but drying in the sun in the open air in this climate is a precarious business, as many know to their sorrow. Two years ago I hit upon in a glass, and dropping into its solution aplan that secures all the advantages of of the chloride of barium, or of the nitrate ann-drying, as usually practiced with

none of its defects.

My plan is to take hot-bed sash and lay them on a frame similar to that of the hotbed in fact, if the hot bed has not been loved, the dry house is siready built. and it is only necessary to lay a floor in-side on which to lay the Iruit. When the fruit has been placed inside, put on the sash, but raise both ends about two inches from the frame, so the air can circulate. The sun's rays will penetrate through the glass freely, and give out their heat below the glass, and being confined, will cause the heat to be much greater than it is in moisture from the fruit, and the sash being raised a little, the hot air escapes at supplies its place at the lower end, and thus there is a constant current of hot, dry air passing over the fruit, and it dries with astonishing rapidity. Two years ago, wishing to dry some green sugar corn (which is about the hardest thing to dry of which I have any knowledge).

I fixed up my hot-bed as described, and supplies its place at the lower end, and I fixed up my hot-bed as describ the corn was gathered from the field, husked, parboiled, cut from the cob, placed in the hot bed, and by evening we had the corn dry as a bone. As good dried corn I never saw before; our supply lasted two years, and the last was as good

By this plan you do not have to be on the watch for every little shower and remove your fruit to keep it from being wet and spoiled; being covered with glass, the water will run off, and as soon as the sun comes out the drying process is resumed; neither will it be influenced by dew if left out over night. Another advantage gained by this method is, that the heat is so interise that flies and other insects will not molest the fruit while dry-

ing, and when dried it comes put clean and sweet. Let all who wish to dry fruit or veretables try this plan. I am confident it will give satisfaction. Caution: Be sure to raise the sash as recommended, else the fruit will burn the same as it would in an

oven .- Cor. Rural World.

Cut the tomatos through, or if large alice in three; let them stand in weak brine over night. To a quart of vinegar add three pounds of sugar; in this vine-gar cook the tomatoes until a fork can easily be passed through them. As fast equally good for ripe cucumbers. I have tested it for the past two years and found no trouble in keeping good pickles.

Pare clingstone peaches just ripe. To four pounds of fruit allow two pounds of sugar, one half pint of clder vinegar, one may be well to try them everywhere table spoonful of cinnamon, one small one A correspondent of the Rural World of Cloves, ded in a thin rag. Uses porce-Sain Kettle. Buil the vinegar, sugar and spice until the sugar is melted; then add, the fruit, and boll until tender. Remove the fruit with a skimmer, and boll the and simmer until done; pour out and let fruit. The result is that he has not had a stand till cool; then sen up tight remov.

sound apple for there or four years. All have been warmy; but what has been have been warmy; but what has been the feeling of peaches in the feeling of the feel two years or more and as good as when first, put up. The same recipe answers for quinces, pears and cherries—quinces and pears to be first boiled tender in water.

In manual Yield of When the Trible Peaches.

A correspondent of the Country Gentlemen says: When a cow, horse or dog chokes with a potato or apple, drench it with aix beaten eggs and two ounces of two years or more and as good as when who resides on the North branch of the Weeping Water, brought to que office to-day a sample of some wheat called the Seven headed California Wheat which he grew on his own farm this season. He sowed about half an acre and feels assured that he will reap at least thirty bushels, at more. The head is composed of sever at more. The head is composed of sever at more at more grains of head than any other. The flour is of head there will have the way and two ounces of the dissolved in them. On one occasion, when my rat dog was nearly choked to death, I ordered three eggs and an ounce of each the death, I ordered three eggs and two ounces of death, I ordered three eggs and two ounces of cash dissolved in them. On one occasion, when my rat dog was nearly choked to death, I ordered three eggs and two ounces of cash dissolved in the man ounce of salt poured down bis throat, and in the few minutes

down so easily as ordinary wheat. This is evidenced by the fact that his half acre has not been damaged by the recent storms, while neighboring fields of the common wheat have been nearly ruined. No braska City Press, July 15

Puddling the Roots.—Many of our readers may have neglected to transplant a choice shrub or tree, until it seems to them too late in the season. They will find, however, that the operation can be safely performed if they will take up the plants and puddle the roots—that is, dip them in mud made of about the consistency of thin mortar. The puddle-hole should be made ready before the plants are litted, and the roots should be dipped in the mud before the sun and air and air can have any effect upon them. After the roots are costed with earth, they may be carried to the place where they are to be planted. Shrubs that have been keeled in until the leaves have started may be safely removed by using the puddle.

Vinegar:- Few persons are Ignorant of the pernicious influence of sulphuric, nitric and muriatic acids upon the human organs of digestion and the entire alimentary canal, and yet it is declared upon the tinest bay of August, good authority that much of the vinegar and TWO PERCENTUM if paid between the in commerce, or liquid sold as vinegar, is made by the use of these concentrated acids at a cost of not more than one or

two cents a gallon.

The best vinegar in general use in the United States is acidified older. In Europe acidified wine is the most esteemed; and hence the name oin, wine; grove sour. In England malt vinegar is popularly used. Wholesome vinegar is prepared by the oxidation of alcohol, and from weak solutation to produce a cheap imitation is ap-

intensely sour, is the most generally pre-ferred in the fabrication of spurious vinegar, although it is also the most injurious to health, as may be conjectured from its softening effects upon vegetables placed in it for pickling purposes. It may be detected, even in the least effective quantities of the property of the structure of the structure. sun-drying, as usually practiced, with of barita. If the vinegar continues clear, sulphuric acid is not present; a cloudy appearance would indicate the formation of the sulphate of barita, which will

prove insoluble, no matter what acid may e subsequently applied. Cultivation of Turnips. - Whether grown for stock or not, every farmer and villager will find it to his advantage to cultivate some of them. Plats of ground where early potatoes and peas have been removed, tence corners, patches around the outside of corn fields, etc., may with but little labor be sown, and many bushels raised without further labor than puilthe open air. The hotter the atmosphere, the greater is its capacity for holding less you intend to thin by hand while the moisture; hence, the hot air absorbs the crop is growing. A common thimblefull crop is growing. A common thimblefull to the square rod is a very good rule. When sown broadcast in the field cultivathe higher end of the sash, and fresh air tion, one pound and a half of seed is

Among the larger varieties are the White Globe, While Norfolk and Aberdeen. The early White Flat is a good variety and very generally grown. Golden Ball and White Stone are raised to some extent.

Curiug Poll-Evil .- James Seafield, Fairfield, Md., writes: I had a horse thatwas pronounced incuratly of the pollevil. as the horse doctor had given him up to die. I thought I would try an experi ment. I laid open the swelling with a knife and forced it to run; after it had run twenty-four hours I washed out the inciquick lime into the cavity. This process of washing out and liming I repeated every twenty four hours for about two weeks, at the end of which time the swelling had gone down and the sore healed over. This I did two years ago, and there is no sign of the return of the poli-evil. would advise a trial.

ITRMS. A correspondent of the Southern Planter and Farmer says that having exhausted our receipts already published on this subject, we add the following:

Out the towards the following: gave up in despair. Hoping to revive a icw plants of muskmelons, he poured a pint of water or each plant just about sun down. The bugs, which had been secreted in the top of the hill, immediately fiew out and took to the grass and as they are cooked, take them out with a weeds. They did not return during the fork and lay them down in a jar—say two night, and the next morning, before the or three layers of tomatoes; aprinkle pulmud dried to their satisfaction, they had verized cinnamon or cloves, and a thin taken refuge from the heat somewhere

layer of sugar; then alternately tomatoes, else. He repeated the experiment on a spices and sugar, cooking all the tomatoes larger scale with perfect success. in the same vinegar; if necessary add more sugar and vinegar. When the jar more sugar and vinegar. When the jar is filled, cover the tomatoes with good cattle, is caused by feeding too largely of the country of the country of the cattle, is caused by feeding too largely of the cattle, is caused by feeding too largely of the cattle, is caused by feeding too largely of the cattle, is caused by feeding too largely of the cattle, is caused by feeding too largely of the cattle, is caused by feeding too largely of the cattle, is caused by feeding too leating. cider vinegar, cold, throwing away the corn. This grain is too heating, and vinegar in which the tomatoes were makes oil and fat instead of flesh and cooked. Lay some horseradish root over blood and bone. Hence, the hog cholera cooked. Lay some horseradish root over blood and bone. Hence, the hog cholera the top of the pickles, and put a weight on to keep them covered. This receipt is It is claimed that seven bushels or peas are more than equal to ten of corn, and they are perfectly healthy. And yet the pea-weevil discourages, the growth of beas south of Cabada. Good crops have, however, been raised in Illinois, and it

says that having noticed repeatedly in ag-ricultural journals that hogs in orchards, are a prevention of injury to fruits, he built alog house in his orchard for saws to farrow in and rear their pigs, and had sound apple for three or four years. All

worm in ten peaches.
