

The Pittsburgh Gazette

The August Eclipse. The August Eclipse for Aug. 27th has been the subject of much speculation...

For the convenience of each of our readers as live within the belt of country...

1. When the sun is more than three-fourths hidden by the dark disk of the moon...

2. Immediately before the last trace of the sun's disk appears, the awful shadow of the moon in the sky may be detected rapidly disappearing from the West...

3. The last trace of light from the sun's disk sometimes appears to separate into little grains or beads before its total disappearance...

4. Instantly on the extinction of the sun will be seen the grandest of all eclipses, the Corona, or crown of light, issuing on all sides...

5. In the corona and flaming also are seen several rose-colored flames projecting beyond the gloomy disk...

6. The planets and large stars are often noted during total eclipses by those who have previously studied their positions on a celestial map...

7. When the sun reappears, the phenomenon of "Baily's Beads" is again noted for a brief time on the right side of the moon's disk...

8. The new Government in Spain is having an early and serious experience: To the revolution in Cuba, which its utmost efforts so far have proved inadequate to subvert, is now added a rising of the home...

9. How Good Farmers Save Money. They take good papers and read them. They keep account of farm operations...

10. The Mound City (Illinois) Journal says that the upper part of the county is infested with panthers and that a reward for them will be made...

NOTICE
