

The Pittsburgh Gazette

Cottiers Explosions in England.

The London Times, noticing the loss of fifty-eight lives by the latest coal-mine explosion in England, remarks:

"The public ought to be inexpressibly shocked by the frequent occurrence of these fatal catastrophes. To omit minor accidents, in April last we reported the deaths of thirty-three men by an explosion in May, out of ten men at work in a coal mine in South Wales, six were killed, and it was mere chance that the number at work was not three hundred or four hundred, with the deaths in proportion. June brought an explosion in the Penarth Colliery at the cost of fifty-three lives, and in July we have this fatal explosion at Haydock. Coals have become the first necessity of life, and it would seem as if colliers were advanced guard in the war with nature, and were perpetually under fire. The parallel may extend, for the fatality of these explosions, it should be remembered, represents only the lives lost in action; the number actually killed by minor accidents is very large, like the loss of life due to sickness in war, be still larger.

"Strange to say, in this very colliery at Haydock twenty-six lives were sacrificed only by a small explosion which was paid for their neglect with their lives. The general nature of these catastrophes is sufficiently well known. The gas with which all coal is more or less pervaded escapes as the working progresses, and, unless dispersed by ventilation, gradually accumulates. When a certain amount of it has collected, a slight accident, or one of those blasters which are common incidents of mining, will be sufficient to explode it. It is evident that in order to avoid this danger every part of a mine ought to be constantly watched, in order to be sure that the ventilation is perfect."

The Latest French Revolution.

The change in France from a personal to a constitutional and liberal government involves more than has ordinarily been secured, through a violent revolution. The pledge of the Emperor that he would propose a body of reform measures more comprehensive than those which were demanded, has been redeemed by the provisions of the Senate Consultation. Laws may be by the new proposals, initiated both by the Emperor and the Legislative body. Members of the Cabinet may be members of the Legislature. Both the Senate and the Corps Legislatif are at liberty to regulate the manner and order of their proceedings, and the sessions of the former are to be public. The Government may be addressed by both branches, and other points of equal liberality evince the length of the stride taken by the Emperor in the direction of strictly constitutional government. It is a result to excite the world's wonder, as striking as the opening of the war upon Ethiopia, or the suddenness of the peace at Versailles. It is a new nation, it is a nation which Napoleon will thus preside, and this voluntary abdication of power is almost as great a marvel as that of Charles the Fifth when he relinquished everything; only the latter gave way to his successor, while Napoleon yields strictly to the people, or else he pretends so well that the pretence answers as well as the utmost sincerity.—Boston Post.

New Mexico.

It is asserted that the hostility of the Indians has for many months seriously interfered with the prosperity of New Mexico, and that neither the soldiers nor the Friends have as yet come to the relief of the people. The richest gold and silver mines, supplied at great expense with machinery, have been abandoned, thousands of miners, it is asserted, have been thrown out of employment, and the machinery left to be burned and destroyed. In addition to this, no "prospecting" can be carried on, and no new mines can be opened. Parties who venture over five miles away from a fort or large town are captured by the Indians who, besides kidnapping and killing the people, steal sheep, mules, cattle, horses and all the live stock they can manage to approach. As a consequence of this state of affairs, the miners are leaving the Territory, business is destroyed, and merchants are falling from having lost their customers, and not being able to sell their goods.

A HUNGARIAN JOURNAL GIVES THE FOLLOWING EXTRAORDINARY CASE OF SUICIDE:

"Last week John Stehalek, a shopkeeper, in the Rue Sebastian, at Pest, came down from his bed-room at five o'clock in the morning, leaving his wife in bed. He then shaved himself, put on his best clothes, stretched himself on the counter, and having loaded a pistol, discharged the contents into his heart. Death was instantaneous. The horror and astonishment of his wife and the neighbors was indescribable, and the more so that no one knew of any motive for the commission of the desperate act. Whilst all were lost in conjecture, an old friend of the deceased rushed up out of breath. He had just received by post a letter from Stehalek, dated the previous evening, and thus words: 'My dear friend—I have decided to kill myself to-morrow. Life is unsupportable. I adore my wife, but she has grown so stout—she that was of so ravishing a figure when I married her. Adieu, my friend; tell my wife that I prefer to die rather than prove unfaithful to her, or to separate myself from her by means of the law. Farewell, and play me.'"

The tunnel under the Straits of Dover,

it is announced, has been reported again by the commission of French and English engineers to whom the subject was referred. The construction of the tunnel through the gray chalk is reported to be feasible, but the cost would amount to \$50,000,000, without taking into consideration unforeseen difficulties. It is estimated that twenty thousand passengers a day, at a fare of \$1.25, or an annual revenue of \$9,125,000 would be required to pay the interest on the sum mentioned. It is not anticipated that so large a passenger traffic could be obtained, and unless the English and French governments would pay part of the expense it would be a hopeless task to attempt to raise the capital required.

Science Perfecting Swimming.

Mr. Frederic Barnett, of Paris, has invented and patented a very novel, yet simple apparatus for swimmers. The invention consists in supplying to man by air the apparatus which has been given to the frog by nature. For the hands he has a large membranous fin which is held to its place by loops passing over the fingers and a strap around the wrist. The surface presented to the water by these fins is so large as to greatly to the effectiveness of the strokes of the arms, but not so large as to exhaust the muscular power. Their effect is to very much reduce the effort required to swim without them. But the greatest ingenuity is displayed in the form and fitness of the fins for the legs, which are attached to the ankles, and are so formed that they act upon the water, both in the movement of bringing the legs together and throwing them back. They act so finely in treating water, as swimmers call it, that one can really walk, if not on the water, at least in it. The difference between swimming with this apparatus and without it, is very much like the difference between rowing a boat with a handle and the blade of an oar. The old swimmer had no trouble in using the fins at first trial, and is surprised to find that what he can do he can swim without exhaustion. He can swim twice as fast with the apparatus as without it, and he can sustain himself for an hour upon the water, or swim miles with it.

Wooden Toothpicks.

Every eating house visitor of this city and other leading cities of the Union has doubtless noticed a small tumbler of wooden toothpicks upon the counter of the cashier, for the use of customers. These toothpicks are a good feature of the present day. The wooden toothpicks have to a considerable extent superseded the gold, horn, ivory and other articles of the kind formerly in use. Their manufacture is carried on by but one establishment, which has been in operation for years. It is near Boston, and employs thirty hands of both sexes. The machinery has been patented, and is propelled by water power. The wood used are maple and willow. The agencies for use elsewhere must be made here. The toothpicks are packed in paste-board boxes of two sizes. One box is ten inches long, by two wide and one deep. It contains three hundred, and sells for six cents. The other encloses twenty-five hundred, and is five inches long, three wide and one deep. The boxes are packed in wooden cases for shipment, or retailed in the city singly by the carriers. The sales are quite large, and amount at times to forty and fifty cases a day, each containing one hundred thousand toothpicks. The aggregate number sold, therefore, amounts in that period to four or five millions.

The Drinking Fountain and Cattle-Trough Association of London recently held its tenth annual meeting in that city.

The report of the Secretary stated that the income of the association for the past year has been sufficient to maintain the existing fountains and troughs in an efficient condition and to build nine new fountains and thirty new troughs. The revenue for the past year from donations and subscriptions amounted to \$15,448. The magnitude of the demand for the use of the animals in the streets of London is stated to be almost incalculable. At one trough 1,200 horses alone, besides oxen, sheep, dogs, and poultry, are daily watered. The managers therefore decided to erect fountains that would enable all comers to quench their thirst without delay. The plan is to erect 123 fountains and 192 troughs under its charge. This benevolent object has attracted great attention among the wealthy, and donations have been received from the following persons: The Duke of Devonshire, £1,500; and from a friend known only as "A Water Baby," \$3,500. A magnificent fountain has already been completed in Hyde Park, at the expense of the Marquis of Westminster, and a gift of \$7,000 for the same purpose, has been made by an Indian gentleman, Mr. Cowasjee Jehangere Ready Money, in token of his gratitude to the people of England for the protection enjoyed by him and his Parsee brethren in India.

A DUEL WITH THE MOST COMICAL RESULT.

Two men were engaged in a duel over five miles away from a fort or large town and were captured by the Indians who, besides kidnapping and killing the people, steal sheep, mules, cattle, horses and all the live stock they can manage to approach. As a consequence of this state of affairs, the miners are leaving the Territory, business is destroyed, and merchants are falling from having lost their customers, and not being able to sell their goods.

The inhabitants of Durresstein and the neighborhood are living a life of constant dread. Near the castle which tradition points out as the prison of Richard Cœur de Lion, a whole granite cliff has begun to slide downwards, and it is expected from day to day that the vast mass of rock will be precipitated on the road into the Danube. The highway is closed from 8 o'clock in the morning, and during the day every one who wishes to pass is given to understand that he does so at his own risk. Mr. Solch, a well known engineer, is engaged on works which are intended to diminish as much as possible the destructive effects of the catastrophe.

The Medical Fraternity have found a subject for investigation in the case of a male child, born in this village a few days since, who has four or five ribs on the right side. The right lung protrudes under the arm like a large tumor. Otherwise the child is well formed and healthy.

INSURANCE.

THE MOST SUCCESSFUL

LIFE INSURANCE COMPANY

OF THE WORLD.

THE NATIONAL

LIFE INSURANCE COMPANY.

OF THE

UNITED STATES OF AMERICA.

Chartered by Special Act of Congress.

Cash Capital --- \$1,000,000.

Branch Office, PHILADELPHIA.

OFFICERS.

CLARENCE CLARK, Philadelphia, President.

JAY COOKE, Philadelphia, Chairman Finance and Executive Committee.

ROBERT W. FRET, Philadelphia, Vice President.

WILLIAM W. SMITH, M. D., Philadelphia, Medical Director.

This Company issued, in the first TEN MONTHS of its existence,

5,395 POLICIES,

INSURING

\$15,142,800.

This Company offers to its Policy-Holders

PERFECT SECURITY

By its Cash paid up Capital of One Million Dollars, and guarantees to the insured, by its

LOW RATES OF PREMIUM.

LARGE DIVIDENDS IN ADVANCE.

Or a Reversionary Dividend of 100 per cent. by its

RETURN PREMIUM PLAN.

GENERAL AGENTS.

R. W. CLARK & CO., Bankers, No. 35 South Third Street, Philadelphia, Agents for Pennsylvania and Southern New Jersey. B. S. Rensselaer, Newark, N. J.

IRA B. McVAY & CO., Agents for Allegheny, Beaver, Butler, Mercer and Washington counties.

LOCAL AGENTS WANTED IN EVERY CITY, Town and Village, and in every State, Territory and Possession of the United States. Agents only in their respective districts.

PROFESSIONAL.

MINNESOTA BAKERS FLOUR, 387 4th St., Erie, Pa. 387 4th St., Erie, Pa. 387 4th St., Erie, Pa.

WALL PAPERS.

THE OLD PAPER STORE IN A NEW PLACE, W. P. MARSHALL'S NEW WALL PAPER STORE, 191 Liberty Street, (NEAR MARKET).

DECORATIONS—In wood

Marble and Brass. Estimates for Wall Paper, Oil Paint, and other work, given promptly.

STAMPED GOLD PAPERS for

Labels, at No. 107 Market Street, J. HENDERSON J. & BROTHERS, PAINT and PAINTERS, Dealers in Drugs, Chemicals, and other goods.

SPECIAL NOTICES.

SCHENCK'S PULMONIC

DRUG, BEAVER TONIC, MANDRAKE PILLS will cure Consumption, Liver Complaint, and all other ailments of the lungs and chest. It is a powerful expectorant, and will loosen the most stubborn cough. It is also a powerful tonic, and will strengthen the system, and give the patient a good appetite. It is a most valuable medicine, and is sold at the lowest price.

DOCTOR WHITTIER CON-

sumes that the human system is a delicate mechanism, and that it is liable to be deranged by the least carelessness. It is a most valuable medicine, and is sold at the lowest price.

THE MARRIAGE RING—

is a most valuable article, and is sold at the lowest price. It is a most valuable article, and is sold at the lowest price.

PROPOSALS FOR COAL.

Sealed proposals will be received at the office of the City Controller, at No. 100 Fifth Street, Pittsburgh, Pa., until 10 o'clock A. M. on the 15th day of August, 1899, for the delivery of gas coal to be used in the City of Pittsburgh, during the month of August, 1899. The coal must be of the best quality, and must be delivered to the City of Pittsburgh, during the month of August, 1899. All communications should be addressed to the City Controller, at No. 100 Fifth Street, Pittsburgh, Pa.
