

Miscellaneous Matter.

THE NEW PROCESS OF MAKING WROUGHT IRON. An interesting letter written by Mr. Ward of Newark, N. J., to the late from Convention appears in the Pittsburg Commercial Journal of the 3d instant. The Journal regards the invention referred to in the letter, as "destined to work a total revolution in the business of making iron;" adding that, if bar iron made by this process can be sold in New York at \$25 per ton, "the iron interest of Pennsylvania may need no other protection for the present, against the influx of British iron, than the operation of the patent for the new invention."

The Journal also mentions that a Kentucky manufacturer, on reading Mr. Ward's letter and examining the specimens, proceeded to New Jersey to avail himself of the new process, and apply it to his iron works. "The specimens of the iron sent to the Convention," it is added, "consist of two sizes of hoop, 1 and 1 1/2 inch; a quarter bar 9-16 of an inch; a rod 1/2 inch thick, and a horse shoe nail. Each of these pieces has been bent, re-bent and twisted, without the slightest sign of fracture, exhibiting the toughness of the old-fashioned, highly hammered, small bar of Juniata iron, which were accustomed to meet with 23 years ago."

The letter of Mr. Ward says: "Having understood that a Convention of gentlemen engaged in the manufacturing of iron was to be held at Pittsburg; I have determined—partly because of the deep interest I feel in the subject—and partly to serve my friend, the ingenious inventor—to call your attention to Mr. M. S. Salter's new process of making wrought iron direct from the ore, by a singular process, with an electric or bituminous coal. Mr. Salter is fully satisfied, from experiments made at Newark, and Boonton, N. J., and several intelligent iron masters, also who have seen the furnace in operation, are of opinion—that wrought iron may be made by his process at two-thirds less cost than by any other process whatever. Mr. Salter feels warranted in saying, that iron of the first quality can be made here or at Boonton, N. J., and delivered in New York at a cost of \$25 per ton. His furnace is adapted to ores, yielding 40 per cent, and upwards of iron. It consists of a triple chambered furnace, one above the other, the ore being pulverized and mixed with hard coal and ground fine is placed in the upper chamber—where the gases and impurities, such as sulphate, &c., are carried off at low temperature. From thence it is drawn through openings in the bottom, into the second or middle chamber, where the fluxing materials are added—hence it is drawn down openings to the lower or puddling chamber—the whole process occupying less than an hour and a half.

Five men are required each turn to work the furnace, and the yield is about 400 lbs. per hour and half. Two and a half tons coal are consumed in 24 hours. The cost of the iron will vary according to the facilities for getting the ore and coal, the cost of labor, &c. Former experiments have proved as far as they have been made that anthracite coal does better as the deoxidizing material than bituminous coal, and quite as well as charcoal (though no better) as either for fuel to heat the ores."

Reminded you to snatch but one kiss more, And yet took twenty when you got away? Those kisses, tender, like the water, wear; Drop, drop, drop, they on the gentle heart, Whose impress never shall from thence depart— Once plain written it lies always there. Affection's tribute it, I mean the thing, Where kindred spirits meet in kindred mood. And mutual sympathy, well understood, With constant vows to seal the offering. If at the door you kiss, don't get too near it, Because the old folks overhead may hear it.

A STEAM MAN!—A mechanic in Russia is said to have succeeded in making a steam man. It is probably one of the most interesting inventions ever offered to the public. It is a colossal statue, the feet of which are placed upon wheels upon a railroad, and as he goes thundering over the course, the steam comes puffing out of his nostrils in a manner to give the appearance of Satan as pictured in Revelations.

NEWSPAPERS.—An invention of a novel character has been made in Paris. By a simple yet ingenious mechanism, the folding of newspapers, which has hitherto been performed by the hand, is now effected by a peculiar machine. With the assistance of one person to attend to it, this machine will fold 2000 newspapers an hour.—Brussels Her.

Just So.—One of our modern newspaper poets gives the sentimental whiners over "the melancholy days the saddest of the year;" the following philosophical consolation: "The leaves of the forest Are yellow and sore, But they look like they used to At this time of year."

The York and Cumberland railroad is rapidly progressing. The iron rails, to the extent of about 1,300 tons, have arrived, and the balance are on the way.

"The 'chivalry of South Carolina' is suffering again. They talk of 'calling out the militia,' and some resolutions stand like the dog at Margate, 'always barking round the corner at some enemy it had never seen.'"

HOREHOUND.

Ingratitude is the basest crime of man.

WE are not among that class of Editors who for a few dollars will let the printer off with honesty "crack up" an article and bring it into rapid sale; neither are we willing to remain silent, after having tested the utility of an improvement or discovery in science or art. Our readers will recollect we told them we were unwilling to let a new and elegant coal stove for weeks ago. Well, we purchased two bottles of WINSLOW'S BALSAM OF HOREHOUND and so sudden was the cure, that we forgot we ever had a cold. Those who are afflicted with it upon our recommendation.—Leavitton Telegraph.

A fresh supply of the above valuable medicine just received at the Sunbury, by J. W. Friling, Mary A. McCay at Northumberland, and at wholesale by Frederick Klett, & Co., corner of 2d and Callowhill streets, Philadelphia. Philadelphia, Sept. 22d, 1849.—8 mo.

FOR RAZOR STROPS.

THIS Powder is warranted for superior to any thing in use for imparting a keen, smooth edge to Razors, Surgical instruments, and all kinds of fine CUTLERY; it may be applied to any kind of steel. Also superior to Razors, Knives, and Perfumery, wholesale and retail, by ALFRED BENNETT, Agent.

Depot of Fine Razors, Stropps, Brushes, and Cheap Fane Razors, No. 18 South Fifth street above Chestnut, Philadelphia.

PHILADELPHIA, Feb. 15th, 1848. This may certify that I have used one of the Stropps prepared with HAYNES' MAGIC DIAMOND POWDER, and can attest in the most unequivocal manner, that there is nothing to be found that will produce the same effect on my razor, and must say to others, try it, and you will find it superior to any hezetero in use. I can truly say that I never knew what a sharp razor was before.

JOHN SCOTT, Iron Safe Maker, 41 S. Third st. PHILADELPHIA, October, 1848.

A very hard beard and tender face has compelled me to seek and test many contrivances designed to make shaving easy and pleasant, but with indifferent success. I have at length discovered DIAMOND POWDER, sold by Alfred Bennett, and Rousseau's Shaving Cream. Their united power act like magic, and impart a power to the Razor to remove the most stubborn beard, without irritating the skin or causing any smarting or itching.
