THE INDIAN WAR IN MEXICO.

We have been permited to look at a letter from Albuquerque, N. M., dated on the 23d June, which gives some particulars of affairs with the Indians in our new territory. The writer says: "Perhaps you may have seen that the Jicarilla Apaches have been at war morning were about 20,000 bushels, which is since the middle of March. A Pueblo chief-in the service of the United States-dashed forward, and, passing his knife around the fallen man's head, put one foot on his neck, and with both hands clutched in the hair, wrenched by main force the scalp asunder, even before the sufferer had expired -- for he screamed as it was done, and was still bleeding Tatlow. when his terrible antagonist swong aloft the bloody reeking trophy, and yelled a wat whoop that sounded like the blast of a trum-

It is to be regretted that the United States in its wars with the Indians should resort to the services of an ally guilty of such a horrible atrocity as is here recorded. Such an act on the part of the Pueblo Wed sell at remorkakably low prices for Cash, ought to have been rewarded with a rope and the nearest tree.

COAL AGAINST SINEWS .- Professor Henry, President of the Mechanics' Institute, at Washington, says : "It has been proved that, on an average, four ounces of coal are softcient to draw, on a railroad, one too a mile. It has also been found on experiment that a man working on a treadmill, continually for eight bours, will elevate one and one half millions of pounds one foot high. Now, Cornish engines will perform the same work by the expenditure of a pound and a half of coal. It follows from these data that about five tons of coal would exolve as much power during its combustion as would be equal to the continued labor of an able-bodied man for 20 years, at the rate of eight hours per day, or, in other words, to the average power of a manduring the active period of life."
