AGRICULTURAL.

and thereugh experiments to ascertain the proper degree of ripeness which wheat should attain before being cut, and knowing that you can appreciate such experiments. I have sent you a short account and the result, which you must use as you see best.

of experiments by one of your correspondents, made for the same purpose; but 1 think his plan, though a good one, is liable Eglenshire Farm, Chester county to error; he compared the wheat by grains, The grains not being regular in size, a variation would, doubtless, sometimes occur,-To avoid any possible error on this score, I have compared equal measures of mine by weight, and as it is usually sold by this gauge, it is perhaps the most proper one.—Another objection to this plan is, that having a small number of grains, the experiment may be affected by extra heads of wheat. To obviate this trouble, I cut sever al sheaves (three during a portion of the time, and two the balance) every morning. The manner of conducting the experiment was this: Several of my neighbors as well as myself being desirous of having the experiment tried, we agreed that I should try it, and if any loss occurred, thereby, it should fall on all equally. On the 26th of dune we selected from my field a portion near one side, which seemed to us to be as evenly ripened as we could get, and at the same time appeared to be a fair average of the whole field. The field had been plowed

The experimental cutting was commenced were cut every morning. These sheaves the approximation were cut with a sickle and a metal label. of in the field one day, and were then hous-

taken down and threshed, by striking the duction. heads over the edge of a board laid on any open barrel, and each ise carefully by itself, with its proper label. As soon as all the lots were threshed and arranged, they were compared, with the reliewing result. Equal for bay, should be moved when in blossom.

10. All wet lands should be drauted.

11. All grain crops should be harvested before the grain is thoroughly ripe.

12. Clover, as well as the grasses intended will grind four times the quantity of wheat for bay, should be moved when in blossom. the sures of each were taken. One measure

By reference to this table we find that the parcels cut on the 10th and 11th of July were the heaviest by nearly one pound, and from these, dather both ways, the weight leurenses. Here, then, is a question in sim-

three mineteenths pounds, I think. You will notice that on the 5th and 6th of July there was not the usual difference. -This I attribute to the fact that those days were cloudy and cool, with some rain in the thereon.

During the first six cattings the grainwhen cracked between the fingers left The Farit Claures, Struckersia, 63deg. He said he had one time forty six nothing but the husk and a fluid resem. When these are out of bearing, the mulch, quarts of cream which he divided into two

would call "dead ripe," that is, the grains were loose in the chaff, and were very call or hogshead; saw it in two in the mid-casily shaken out. That cut July 10th and die, and bury each laif in the ground even The Proper Time for Cutting 11th, when it got dry in the barn, threshed with the top. Then take a small keg and very easily, but not so easy as the other: bore a small hole in the bottom; place the the chaff seemed lighter, and even now is in the centre of the barrel around the ker. About this time last year I noticed a series leave nothing but the husk and a thick pulp, tom of the keg late the barrel and rise up to the roots of the vines, and keep them Yours, Constant Readen,
Eglenshire Farm, Chester county, Pa.—
this way will grow to a great size, as they are made independent of both drouth and wet weather, in wet weather the barrel wet weather, in the ground can BLIND STAGGERS,-The following is said can be covered and in dry the ground can

to be an effective remedy for this formidable disease in horses: Gum camphor, one on Ratsino Tomarons.—I often have sunce; whisky or branday, one pint of gum inquiries how I get my tomatoes ripe so mable, flaxseed, or some other mucilaginous tea, given every three or four hours; seldom in the house about the Farmer. I start them necessary to give more than three doses. boxes; as soon as the season will permit, I transplant in hills three feet apart, one stalk Agricultural Fixed Pacts.

Somelody has got up the following list of I use a shes around the stalk. I use a rack Somebody has got up the following list of "axed facts" in agriculture, and for once in a condensation of that sort, has hit the nail at the head in the most of them:

I All lands on which clover or the grasses are grown must either have lime in them naturally or that mineral must be artificially strong to the content of turally, or that mineral must be artificially | Farmer, supplied in the form of lime, stone, oyster

IMPROVEMENT IN FLOUR GRINDING. -- One 2. All permanent improvement of land of the great obstacles in the way of grinding must look to lime as its basis.

3. Lands which have been long in culture the liability of heat. An English inventor, the whole field. The field had been proved twice, well harrowed and manured, the seed drilled in at the rate of 1½ bushgls per acre. In the spring as soon as the season would admit, the field with a heavy plank roller, to press down any roots which might have been found needs line also of line, or mart—the land needs line also of one of the largest steam mills in a late lawsure against the proprious twice proprious contribution of the spring a cold current in constant circulation upon and between the mill-stones, and in a late lawsure against the proprious contribution upon and between the mill-stones, and in a late lawsure against the proprious contribution upon and between the mill-stones, and in a late lawsure against the proprious contribution upon and between the mill-stones, and in a late lawsure against the proprious contribution upon and between the mill-stones, and in a late lawsure against the proprious contribution upon and between the largest steam mills in a late lawsure against the proprious contribution upon and between the mill-stones, and in a late lawsure against the proprious contribution upon and between the mill-stones, and in a late lawsure against the proprious contribution and the second drilled in the form of bone-dust, gname, native phosphate of line, and it is important which overcomes this difficulty. By keeping a cold current in constant circulation and between the mill-stones, and the second drilled in the form of bone-dust, gname, native phosphate of line and the second drilled in the form of bone-dust, gname, native phosphate of line and the second drilled in the form of bone-dust, gname, native phosphate of line at the field with a heavy plank roller, to press down any roots which will be benefitted by the application of line, and it is important which are second drilled in the field with a heavy plank roller, the field with a heavy plank roller, the field with a heavy plank roller, and the second drilled with a heavy plank roller, the field with a heavy plank roller, and the se operation which will repay many times its state of fertility unless clover and the grass. London, or, indeed, in the world, for ines are cultivated in the course of rotation.

5. Mould is indispensible in every soil and out as to the value of the invention that are on the morning of the 27th June, and from that to the 1st of July, two good sheaves were cut every morning at or near 0 o'clock; from the 1st to the 20th of July three sheaves were cut every morning. These sheaves by the application of composts rich in the control of the value of the invention to at are a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to at are a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to at are a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to at are a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to at are a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to at are a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to a beauty supply can only be preserved through the california of clover and the grant of the value of the invention to a beauty supply can only be preserved through the california of clover and the grant of the value of the invention of the value of the invention of the preserved through the california of clover and the grant of the value of the invention of the value of the invention of the invention of the value of the invention of the invention of the value of the preserved through the california of the value of the invention of the value of the value of the invention of the value of the invention of th cent., the profit on manufacture was £8 17s.
6. All highly concentrated animal mancontaining the date, was fied to the band of ares are increased in value, and their bene- of wheat. This saving arises from the cach sheaf; every morning they were car-fits prolonged, by admixture with plaster, following reasons: 1st, speed in grinding, ried from the barn and had on a mow over sub, or by powerized charcoal. 7. Deep plowing greatly improves the productive powers of every variety of soil stones without danger of heating or doughhat is not wet.

S. Subsoiling sound land that is not wet is crossed quantity and improved quality of On the 1st of August the sheaves were also eminently conducive to increase pro- meal; 3d, immediate facility for dressing the meal without the necessity of being kept a length of time to cool and seaver from the 12. Sandy loams can be most effectually cause being kept constantly cool, they never improved by clay. When such lands require liming or marling, the lime or mart is state, and thus are always clear, and have a most beneficially applied when made into sharp edge; 5th, freedom from dust, which compost with elay. In slacking lime, salt constantly flies about the mill on the old water is better than fresh.

13. The chopping or grinding of grain to examt drawn from the stones and conveyed be fed to stock, operates as a saving of at to the appropriate chamber, where it beliest 25 per cent.

14. Draining of wet lands, and marshes, mixed with the sweepings. For the right adds to their value by marking them produce more, and by improving the health of neighborhoods.

15. By stabling and sheltering steek dockyards, until intely, when the rate was through the winter, a saving of one-fourth reduced to one cent per bushel in considera-the food may be affected; that is, one-fourth tion of a very large increase in the amount
