for the same purpose. To preserve them for two or three months grease them all over with melted mutton suct, and then wedge them close together, small end down ward, in a box of bran, layer above layer. The box must be closely covered. Char-coal is better than bran. Keep them in the coolest part of the house.

GRAHAM FLOUR MUFFINS .- One pint of sour milk, and a small teaspoonful of soda; one tablespoonful of sugar; Graham flour enough to make a thick batter. Bake in rings, or drop the batter in epoonfuls on a square tin. A little salt should be added to the batter before baking.

CRUMPETS .- Take three tea-cupsful of raised dough and work into half a tea-cup ful of melted butter, three eggs, and milk to make a thick batter. Bake in a hot, buttered pan, in half an hour.

GOOD RICE PUDDING WITHOUT EGGS. One cup of rice to nine cups of sweet milk; set upon the stove three hours without boiling, until the rice swells so as to partially thicken the milk, stir occasionally, then add one cup of raisins, sweeten to your taste, bake one hour and a half.

RIBBONS RENEWED .- Wash in cool suds made of soap, and iron when damp. Cover the ribbon with a clean cloth, and pass the the iron over that. If you wish to stiffen the ribbon, dip it, while drying, into gum arabic water.

TO WHITEN STRAW HATS .- Scrape stick sulphur with a knife, mix the powder to a mush with water, plaster it thickly over the straw, and place in the hot sun several hours; brush off when dry. An easy and effectual plan.

TO KEEP KNIVES FROM RUSTING .- An excellent way to keep knives from rusting is to scour them on a board, crosswise, with some dry brick, after having wiped them perfectly dry; and put them away without wiping off the brick dust.

How to DRY FRUIT.—The general promise of a large fruit crop this year, and the probability that the industry of the fami-lies of our country readers will be turned to most profitable account in drying fruits for market, a branch of commerce which supplies many families with comforts and necessities, at a comparatively small outlay of labor, makes the following directions for preparing fruits particularly worth of

APPLES .- Pick before fully ripe, pare all over, slice from each side to the core—the thinner the slices the quicker they will dry, and the higher price they will bring. All pared and sliced fruits should be dried in the shade and out of the wind, to preserve a light color, on which very much depend

PEACHES should be picked before too ripe, sliced towards the centre, so thin that when dry the slices will not be thicker than the blade of a table knife. LICE ON APPLE TREES.-THE Rural New Yorker has the following in relation per bottle. to the lice which are so frequently found on apple trees: A correspondent sends us a tion of bark from an apple tree, covered with lice, and asks if we can explain what is its cause, if hartful to the trees and the best remedy. Yes; it is the Apple Bark-louse (Coccut arborum linearis, Modern). It is most common on unhealthful trees trees that are grown in grass land are most likely to be infected with them. It is hurtful to trees and should be exterminated. A good way to do this is first to feed the trees liberally with manuec and ashes. Ashes alone, if you have no manure to spare, placed about the roots—not in contest with the body—will help. Dig up the the grass about the tree. This spring take a boe, and give the bark a good scraping; then wash the tree with strong scap sads. This should be done at once and the wash-
