

Miscellaneous.

THE provisions of the soldiers' home-stand bill which has just passed Congress and received the signature of the President, are as follows: Every officer, soldier, sailor or marine who served in the war for a period exceeding ninety days, may in settling upon the public lands, under the homestead laws, count the period of his service as a part of the five years' residence required to obtain a patent to one hundred and sixty acres.

There is the stump speech in the form of a prayer that caused the chaplain of the Massachusetts House to be called to order. "The church is this (O Lord, and the fullness thereof; the world and they that dwell therein; and now another of the world's great questions presses into this chamber for an answer: What shall we do for women? And clamor answers, Let her vote! clamor answers again, let her let her vote! Clamor thunders—clamor whines—clamor prays—clamor jells. Shall we heed the jeers of Clamor? God forbid! If there be any stain of a right withheld from those bright disheveled beings who, as mothers, wives, sisters, companions, friends, make up so much of the happiness of Commonwealth homes, give us wisdom clear enough to expunge that stain from the records of our otherwise prosperous State."

The prayer was really addressed to the gallery, where a great many prayers, because a large number of women's rights females were present.

THE MISSING RIB.—An exchange says: "In rummaging among dead men's bones Mr. Perrin finds a brass yet in man of the original Adam in an additional or supplementary eighth rib making its appearance from time to time. This, we suppose, is the one which was deprived of during the manufacture of Eve. Although we are not authorized to say, we are tempted to suggest that this extra rib may be found in those who, by persistence in refusing the comfort of a wife, have, according to Mr. Darwin, degenerated, or rather reverted, to their original condition, when man was a simple-minded paragon, ignorant alike of the world and of woman."

Agricultural.

FRUIT-GRAFTING.—As the time will soon be here when grafting is in order, we repeat our former advice that every farmer should do his own grafting. It is a very easy operation when once understood, and this is readily done by seeing it done. A sharp penknife and a good line saw are indispensable. Splitting the stock so that the bark shall not be bruised, and shaping the scion to fit the stock both ways, preserving also the bark, are the first and most important steps in the operation. The scion and stock are exactly together, so that the sap can intermingle—there is no danger of failure if properly waxed. We make a shoulder to the graft and think it adds to the certainty of success, though it is not necessary. We prefer also two eyes or buds to one, and would rather have only one than more than two. One year's wood should always be used when it can be obtained, as it is more certain to take and grows more vigorously, and the graft should be cut from a healthy branch.

We wish to remind those preparing grafting wax, that we have found four parts of rosin, one part of beeswax, and one part of tallow, to be the best proportions. Melt them together in a skillet, (which is the best) or in a tin, and when melted, should remain in the vessel and used as needed. Twenty or thirty scions can be waxed with one tonting tin. When much grafting is to be done, a little fire for heating the wax should be made on the spot, between two bricks or stones.

We have seen preparations for making grafting wax and we believe we have tried them all, but prefer our own. Applying it warm or hot does no injury to the graft. The object to attain in the proportion is that the wax will not crack in cook, dry weather, or run in warm weather. If however, upon trial, different proportions be required, the foregoing can be altered, though after using them in several ways we have come back to these.—Greenmountain Telegraph.

SUNBURY HEATER. SUNBURY AT MARKET SQUARE FAIR, BALTIMORE.—First premium for Fire-place Heaters awarded the Sunbury Heater. Advantages of the Sunbury Heater. 1. It is constructed that one-third more of the radiating surface enters into the room, giving that much more additional heat without extra fuel. 2. It is the only Hot-Air-Fire-place Heater in the market. Like the regular cast-iron heater, it loses no heat, but confines it all to its legitimate purpose. 3. The fuel magazine is double the usual size, extending from the fire-box to the top of the stove, with capacity for twenty-four hours' supply of coal. 4. The patent double cover for roof magazine consumes the gas, prevents escape of gas into the room, and makes it impossible for any puffing or explosion of any kind to occur. It is an advantage possessed by no other fire-place stove in the market. 5. There are three air columns, wherein a brisk circulation is kept up, drawing the cold air in the room through heated flues into a large hot-air reservoir, at the back of the stove. 6. No side pipes are used, as the air is heated in a reservoir having double radiating flues and double back, supplying large quantities of hot air without waste of heat or fuel. 7. A damper on top of the waste heat an adjoining room on the first, besides heating the rooms in second and third stories. 8. A damper on top of the stove, connected with the hot air flues, controls the quantity of air required for the use of either the upper or lower register. All the radiating stoves are very inconspicuous in this respect. 9. The grate is self-sealing, and no dust can escape while blazing it. STURAT, PETERSON & CO., Philadelphia. H. B. MASON, Agent. Nov. 11, 1871.
