pins. The shorter length are si into strips of suitable thickness us by gang saws that make a nto strips quicker than you saws cuts off the strips into five lengths. Eeach pin is now square block about five inches and three-quarters of an inch s In this shape they are fed out troughs into automatic lathes. of which turns out eighty i pins per minute. With equal n ity the knives of a slotting mach set to work like a circular saw, out the sloping slot of each When this is done they are the oughly seasoned in drying kill The next process is polishing. Fa bushels of them are tossed toget into a revolving drum, where almost done. That gives that nice glossy surface. After all the they are packed in boxes-five grain a box-by girls, and are ready the market.

Saving Flower Seeds

The best way to save the seeds owers is to watch the ripening the seeds generally; take with little paper bags or boxes careful labeled with the name of the see which they are to contain, and the select from the choicest specime one kind at a time, rejecting the one kind at a time, rejecting not sufficiently matured as likely mould and injure the rest. In matter of preserving both flow and vegetable seeds, there is mu neglect, and the absence of flower about many homesteads is in great measure to be attributed to

> take charge of the flowers: it is urally their province and should and friends; for though the dista may be short, yet a slight change erly-educated young woman-
