### A NEW GOLD FIELD. A Bonanza Found in Michigan.

The Mining Journal gives a history of the scovery on the Lake Superior Iron Company's lands, and states that last week, at lepth of 19 feet from the surface, a blast opened up a "chimney" or bunch of quartz

nderfully rich in freegold. Two more holes were put into this rock and about a bushel of it was taken out, all showing free gold. Specimens that the writer examined are as full of native gold as the Calamut & Hecia rock is of copper, and would yield from \$25,000 to \$20,0000 of the precious mutal. This chimney is round in form and from eight to ten inches in diameter. It has been followed down some 3 feet, and is as rich at the bottom as at the point where it was first encountered. The vein of quartz in which it is carried was 23 feet wide at the surface. It has widewed 4 feet at the depth of 16 feet, and has now a width of from 3 to 31 feet. It dips south at an angle of about 75 degrees, its trend being almost due cast and west. The rich rock described was first found on the hanging wall, but is now near the footwall. Work on the exploration has been suspended temporarily, the men being employed in guarding the find from specimen seekers', the rock being so rich that the company proposes to build a strong storehouse in which to "stock" it. A strong fence has been put up around the shaft to exclude the curious who have no business on the inside. Samples of quartz have been sent to James S. Fay, general manager of the Lake Superior Iron Company, at Boston; and he is expected on the ground this week. when it is probable that something definite regarding the future steps the company will take to develop the property will be disclos-

The storm came from the west through Maimi county and crossed the Lake Erie and Western Railway at a point between Denver and Peru. Its noth through this county was from two to three miles and in that space no verotation occuped

The bail fall was phenomenal in every way. The stones were of the size of hens' ears and could be gathered by the hashel after the storm. A great number of fine forest trees were broken off and piled up in an interminable mass. Not a field of grain escaped destruction in the pathway of the storm. The corn was riddled and stripped of the ears and silk. Oats were thrushed out and the stalks driven into the earth. Apples, melons, grapes and all small fruits and vege-
