Intended For Maternity and Homekeepers, Many Are Driven Into Occupations That Were Once Only For Men-Some Very

Plain Talk. The reiteration of any statement, however important or timely, becomes monotonous, but so long as mischievous ideas are promulgated they must be met and discredited, though it be seventy times seven and more. Otherwise the world would remain eternally in error. It will be admitted, even by the most radical of the so called woman's rights advocates, that, in conformity to her peculiar physical organization, the female of the human race has been especially created to perform a specific work in the domestic economy. This is, comprehensively stated, to bear children and maintain the home. On the other hand, it was manifestly intended that the male of the human race should cherish and protect her, assuming the severer physical labor which must be performed and shielding her from every danger that might threaten the health, happiness and perpetuation of the species. In the original plan one duty was not regarded subordinate or inferior to the other. Nature had simply divided the burden of existence, assigning to one the nctive part of providing food and shelter, and to the other the more important part in the reproduction of the speciesto strip it of all its sentimentality and

state it plainly. But in this, as in all things else, the majority of men have subverted the law of nature and have promulgated the theory that they, the actual earners of wealth, owe little to women who merely raise children and preside over the home which they, the men, have founded and which they alone work to sustain. This assigns maternity and home keeping to an inferior position and places the mother and the head of the household in the attitude of dependent, who must be content with whatever the hushand and father sees fit to give her, disregarding common justice and that which is her rightful due-the absolute and equal division of all that accrues through his work and her economy.

The increasing love of luxury among men, the comfort which club life provides, with emigration from thickly populated centers to remote fields of industry, have reduced the number of marringeable men in many states. This, with the unwillingness of the few to accept the dependence of the nature described above, has also largely increased the number of unmarried women who choose to, or are forced to, provide for themselves. Whether they belong to one class or the other, it remains none the less certain that whatever income they are to have they must acquire by their own efforts. They have no other alterhative, unless they are willing to accept the distasteful charity of wealthy friends or relatives, or join the army of the lost, whose brief senson of ease and luxury almost inevitably ends in the prison, the almshouse or the potter's field.

And yet, again and again, and still again, solemn exhortations are sounded from the palpit warning "woman" from descriing the home, her proper sphere, to join the feverish multitudes who crowd the marts and highways of the world. Women themselves, weak, foolish and unthinking, selfishly satisfied with their own seclusion, echo the senseless and cruel command.

For it is cruel, as heartless as the snggestion of the pampered French queen whose subjects, starving for bread, were advised "to put a chicken in the pot."

The wife of a famous Union general some time ago deplored the exodus of woman from the home into business and the professions. In all her life she had never known want or the lack of a thing she desired. After the death of her husband friends and the government, in consideration of his service, provided for her so that she might enjoy the same comfort to the end of her days. Not a dollar of the generous income was the result of her own personal effort, and but for the bounty of the country she might have learned something of the stress which forces other women to seek an honest livelihood for themselves.

The situation has passed beyond the power of any human being to alter it. Instead of decreasing, no matter what the result may be, the exodus will continue. Those women who have braved the world have tested through experience the sweets of independence and the satisfaction which comes from being able to do work and do it well, which not only provides a living for the present, but independence in old age. Poverty, helplessness-bread and board that are bitterly gradged-have barried many a woman to her grave whose old age, had she been able to benefit by the new conditions of today, would have been serene

and unclouded. There is no fear that women will cease to marry and to aid in founding homes, but the skilled workwoman of the twentieth century will be able to demand that conality in matters of domestic authority and finance which her ignorant sister dared not ask, hampered by the limitations of her sex, aggravated by her ignorance. A new era has dawned. Neither prejudice, nor conservatism, nor the combined hostility of church and state can order the sun to stand still. The day of miracles, in this direction at least, has passed.-Mary H. Krout in Chicago Inter Ocean.

BACTERIA AND COLORS.

Blue Rays Kill Germs, but Red Does Not Much Affect Them.

Although investigation has not been idle, experimenters have not been wholly agreed as to the exact property or modern atheism. Homer and Virgil josfield of the san's rays which is most of tled Ossian and Tasso, while Rousseau's ficient in action on bacteria and fongi. Making Shot in Water.

The shot-making trade has a legend which recites that back in the days when guns were shot off by lighted matches and were swiveled to supports because they were too big and clumsy to be lifted to the shoulder, and when all shot was moulded as bullets are to-day, some workmen were fastening an iron grating to the wall of a castle. They had cut out the hole in the stone, and, after placing the iron in the hole. at her desire, John Ferneyhough, James poured some lead in to hold the iron in place, just as they do to-day. Some of the lead escaped and ran over the edge of the wall into the moat below. Soon afterward the attention of the soldiers was attracted to the lead in the clear water, and, dipping it out, they found that the metal in falling from the height had become globules. After that those soldiers made their bullets by sprinkling melted lead over the castle wall into the waters of the most.-

THE KEELEY CURE

Is a special boon to business men who, having drifted unconsciously into the drink habit and awaken to find the disease of alcoholism fastened upon them, rendering them unfit to manage affairs requiring a clear brain. A four weeks course of treatment at the

PITTSBURG KEELEY INSTITUTE, No. 4216 Fifth Avenue,

No. 4216 Fifth Avenue,
restores to them all their powers, mental and
physical, destroys the abnormal appetite, and
restores them to the condition they were in before they indulged in stimulants. This has been
done in more than 1600 cases treated here, and
among them some of your own neighbors, to
whom we can refer with confidence as to the
absolute safety and efficiency of the Keeley Cure.
The fullest and most searching investigation is
n vited. Send for pamphiet giving full information.
