Edward Hoover, SHERIFF.

DANGER OF FATIGUE.

The late George Higginbotham, chief justice of Victoria, was noted for the thoroughness with which he performed his duties, no matter whether they were pleasant or unpleasant, light or onerous. During his early life in Melbourne, the breaking out of the New Zealand war caused the departure of the Fourth British infantry from the city to the scene of hostilities. Volunteers were enrolled to guard Melbourne, and Mr. Higginbotham joined them as a private. An officer of the volunteers describes a scene which shows how conscientiously his duty as a soldier was performed:

"Scene, the Werribee camp. Time, 4:30 in the morning. Company paraded, and the officer commanding the company announces that the two men whose names are on the list on the roster are to fetch the meat from the butchers, the meat to fetch wood, and so on. 'Orderly sergeant, call the names.' 'George Higginbotham, Richard Hale and Bud.'

A sort of shudder passed through the ranks when it was seen that the men whose names are on the list on the roster are to fetch the meat from the butchers, the meat to fetch wood, and so on. 'Orderly sergeant, call the names.' 'George Higginbotham, Richard Hale and Bud.'

Astronomical Photography.

In astronomical photography the most startling figures confront us. Stars which to the eye are invisible, even with the most powerful telescope, are shown by this photograph as if they were in conjunction with the telescope—as an example, Dr. Gill's photograph of the nebula near Argus. It will give some idea of the number of stars shown by this photograph, and that the space of the sky that would be covered by a shilling held at arm's length from the eye contains no less than 200,000 stars, scarcely anything which would be visible to the unaided eye.

On the Ferry.

Blossom (to Italian sitting beside a large vase)—My friend, that vase is taking up considerable room. Will you kindly move it and allow me to sit down?

Italian—No move noth.

Blossom—But I want to sit down.

Italian—No take not. I told you before.

Blossom (getting warm in the collar)—If you don't take that vase off the seat I will. Do you understand me?

Italian—I ustains what you talk.

Blossom (throwing vase off the seat)—There, now! If you want your language, you can go and get it.

Italian—Eat no belongs to mea.

Blossom—Eat no belongs to mea. You see thata beger man.

Blossom (as he replaces the vase)—Why didn't you say so before? I don't mind standing up. It's only a short distance across.

Italian (to himself)—Eat no belongs to mea, eat no belongs to mea, eat no belongs to mea. Eat belongs to mya hotel sit in the 'it; I take eat to her.—San Francisco Wave.

Zebra Stronger Than Horses.

The zebra is an almost incorrigible little beast, and up to now all attempts to train it to work have had small success. The Boers, persistent and methodical, have conquered it at last, and put the hitherto unruly animal into the traces of their mail coaches.

Together the zebras show an inclination to bite, but when harnessed with mules they are easier to manage. This inclination of the zebra is one of the greatest importance to South African. Horses are likely to be killed by hyenas, while the zebras are a match with teeth and hoofs, for any hyena.

Boers find that the zebra is capable of greater movement than the horse and is not so susceptible to disease. Strange to say, the little striped beast is also stronger than the horse, though its weight is less than one-half that of the other draft animal.—Strand Magazine.

One million standard silver dollars weigh 412,500,000 grains, or 859,878 ounces troy, or 71,814.88 pounds troy, or 58,928.57 pounds avoirdupois, or 29,464 "short" tons of 2,000 pounds avoirdupois each, or 26,207 "long" tons of 2,240 avoirdupois each.

THE RETIRED BURGLAR.

An Experience Which Was Unexpected and Deducible Conclusion.

"Looking over the stuff on the side-board of a home in one night," said the old burglar, "I couldn't help thinking that if this was a fair sample of the home I'd steal tonight, I'd have had to hold the door open for nothing but to hold tea and sugar and sponges and everything else (just the same). In the drawers, among the plated spoons and forks, there was a miserable little lot of thin silver spoons and light forks, scarcely worth carrying off, and a silver spoon or two, but I sorted out these things and laid 'em together, corded in a little pile on the left hand side of the top of the sideboard, handy to pick up while I was ready. I had finished the sideboard and picked up the spoons and forks just about to put 'em into my left hand inside coat pocket when I heard somebody say:

"There, that'll do nicely!"

"Naturally enough, I suppose, I faced around where the sound came from, still holding the spoons in my hand. I realized in a minute just what it meant, and I might have thrown the spoons at him or turned the other way or dropped; but, to tell you the truth, I was a little surprised—it's a watchful man that a burglar surprised—and in the fraction of a second that I stood there, thinking about it, there was a click and a flash, and I knew I'd been photographed.

"I think," he says, "you'll find that'll come out very nicely—features and all the accessories clear and distinct. We'll send you a proof in about two weeks. What is the address, please?"

And when I said nothing, he went on: "It is customary for us to require a deposit from customers that we don't know. If you don't wish to make a deposit, you might leave the spoons with us as a sort of guarantee of good faith."

"I'd dropped the spoons in my pocket and reached for my gun. I wasn't going away without that photograph machine and everything in it, but long before I was ready he'd pulled a string of something and turned up every light in that room and the next, and he was standing just inside the next room holding a gun very steadily across the top of the camera. He was stock, business, like looking man—very much so. It was clear that there wasn't anything for me to do but to leave the spoons, and that's what I did, not taking anything further, but just held the gun on me. I understood that there was no use of my waiting for another sitting.

"I was back in that town two or three years after that, and I looked along in the photographer's showcases for the picture, but I didn't see it."—New York Sun.

The Giants and the Flood.

Among the many queer stories related in the old Jewish Talmud is one concerning the action taken by the great race of giants at the time of the deluge. According to Rabbi Eliezer, when the flood broke upon the earth the giants exclaimed, "If all of the waters of the earth be gathered together they will only reach to our waists, and if the fountains of the great deep be broken up we will stamp them down again."

The same writer, who was one of the compilers of the Talmud, says that they actually tried to do this when the flood finally came. Eliezer says that Og, their leader, "planted his feet upon the fountains of the deep and with his hands closed the windows of heaven." Then, according to this same queer story, "God made the waters hot and boiled the flesh from the bones of the haughty giants."—Strand Magazine.

A Good Easter.

When Gustavus of Sweden was besieging Praga, a box of extraordinary aspect gained admittance to his tent and offered, by way of amusing his majesty, to devour a large hog in his presence. Old General Konigsmark, who was in attendance, at once suggested that the man with the gargantuan appetite should be burned as a witch, whereupon the box, whose feelings were hurt by this observation, exclaimed, "If your majesty will but make that old gentleman take off his sword and spurs, I will eat him before I begin the pig." This was accompanied by such a "hideous expansion of the jaws and mouth" that the general, though he had given his "troops" on many a day, turned pale and fled inconspicuously to his tent.—San Francisco Argonaut.

Useful Rats.

Rats have been found very useful in cotton mills where the raw cotton has been imported from foreign countries. In a Spanish cotton mill the store room was invaded by swarms of rats, who pulled the bales to pieces to get at the seeds left in the cotton. They did the work thoroughly, without injuring the fiber in any way.

The Greeks and Romans had no week

until they borrowed this division of time from the east. The Greeks divided the month into three equal periods, the Romans into three very unequal—the kalends, ides and noons.

DR. MORRITZ SALM,

Wonderfully Successful in all Chronic Diseases and Diseases of the EYE, EAR, NOSE, THROAT, LUNGS AND NASAL CATARRH

All Eye Operations Successfully Performed.

Examination and Consultation Free to Everybody.

HE CURES AFTER ALL OTHERS FAIL.

The Most Successful and Scientific Treatment of all Diseases and Weaknesses of Mankind.

Views of Scientists Who Differ With Harvey's Theory on Their Relations.

Do you know that some of the very best physicians in the land are far from being satisfied that the heart is the organ which causes the blood to circulate in the veins and arteries? The theory of Harvey, which maintains that the impulsive stroke of the heart is "the sole motive power," is disputed by persons who know that almost blood circulation in a minute than he ever did in his life. Various causes for the phenomena of blood circulation are assigned by the different students of the subject, but the majority of the old nobility swears at her pedigree. Then came heralds tracing out Irish blood lines until the French authorities in disgust concluded that Eugene was descended from all the royalties of Ireland back to Brian Boru.

Queer Human Beings.

An island in the gulf of California is inhabited by queer human beings. The Curis, with their dark, sun-burnt skins, the most interesting tribes of aborigines to be found on this hemisphere. They are said to have fair skins and blue eyes and hair, a fact which has attracted the attention of the Indian tribes of the mainland or of the peninsula. In former days, spreading havoc along the coast, but in later years they have kept cloistered to their island home. They are extremely fierce and warlike and use venomous arrows in fighting. The island is known to be very mountainous, with immense rugged crags and gorges, where the Indians ambush and which renders subduing them almost an impossibility. Beyond the fact of the existence of the Curis, a tribe very little is known. Their habits and language are said to be peculiar to themselves, while their origin is a subject of conjecture. The island shows no sign of vegetation from the gulf, and the method of getting a subsistence is unknown. Skippers cruising in those waters carefully avoid it, and in later years they have kept cloistered to their island home. The island is said to be inhabited by a few men, and is known to be a subject of conjecture. The island shows no sign of vegetation from the gulf, and the method of getting a subsistence is unknown. Skippers cruising in those waters carefully avoid it, and in later years they have kept cloistered to their island home. The island is said to be inhabited by a few men, and is known to be a subject of conjecture.

Salt as a Medicine.

Salt is good to check bleeding of the lungs and as a nerve and tonic for weak, thin-blooded invalids. Combined with hot water, it is useful for certain forms of dyspepsia, liver complaint, etc.

Montreal suffered from fire in 1822.

1,500 residences and stores being blotted out of existence, the property loss amounting to \$5,000,000.

Given under my hand, at my office in Somerset, this 23d. day of October, in the year of our Lord, one thousand eight hundred and ninety-six, and the independence of the United States of America the one hundred and twenty-first.
