Dickens and His Cat.

Charles Dickons was a lover of animals, and like all true lovers, he was from the kitchen one by one. Mr. quietly back.

Again they were removed, but the third time of their return she did not placed them at her master's feet, and taking her stand beside them, looked imploringly up at him.

That settled the question. Therea ter the kittens belonged to the studand they made themselves royally at ing about the writing-table, and scampering behind the book-shelves. Most of the family were given away; one only remained, entirely deaf, and known, from her devotion to Dicken's, as "the master's cat."

This little creature followed him about like a dog, and sat beside him while he wrote. One evening Dicken's was reading by a small table whereon sat a lighted candle. As usual, the cat was at his elbow. Suddenly the light went out. Dickens was much interested in his book, and he re-lighted the candle, giving the cat a stroking

Afterward he remembered that puss had looked at him somewhat reproachwas only when the light again became her melancholy. Turning suddenly he found her deliberately putting out the candle with her paw, and again she looked at him appealingly. She was lonesome; she wante I to be

petted, and this was her advice for bringing it about.

With the Butterflies.

The study of the ways of butterflies will prove a delightful pastime to the boy or girl who knows only how to capture the pretty creatures in a net, to imprison and then to kill them. On some go den June afternoon, altogether about the grocer, and he would not too beautiful to be wasted indoors, give yourselves up entirely to the batterflies. Follow and watch without startling them, and even in so short a time you will learn enough to make you wonder that any one can presume ly down the street, jogging along in a trotted away, with a parting smile over to call them aimless in their cheerful,

basy little lives. The first butterflies that make their looked in upon Mrs. Pettigrew a few appearance in the spring are the va moments afterwards. She found the rious dusky-wings, brown and black, counter of the little baker, bland and old woman looking at the contents of which blend perfectly with the hues of the basket, which were spread out on the moist bare twigs and branches. "Here's Lion," said Baker Fritz, the table before her, and there was such Then comes the tiny blue butterflies, a look in her eyes! And there was heralds of the first violets; to be follow-Lion, rolling all over the floor in the ed later by the gay swallow-tails, most absurd manner, showing that he which are color of the rainbow; the pure white butterflies of mid-June; the It seemed that the whole town want- active little tawny and black skippers; ed to help Lion take care of Mrs. Pet- the coppers and the brilliant angle-Another customer came in just then, tigrew. Every day his circle of influ- wings, which romp in the sunshine on the hottest days.

Batterflies have a dainty way of alighting for rest. A moth will com? Lien was growing impatient. He "It's only a little shawl, for the to a sudden stop and settle immediatestood up, with his fore feet on the edge mornings are cool," she explained to 1y, but a butterfly usually keeps its of the counter, and sniffed hungrily at | Lion, who gamboled gaily in reply as | wings more or less open while it sways the loaves that were nearest, watch- he started out, for the dog seemed so loand fro on some flower. If it be feeding Fritz with interest as the baker human that she felt he must know all ing, however, it will close its wings tightly, back to back, and if it be asleep, the wings will be packed away into the down between the hind wings, so that only the hind wings may be seen.

Different butterflies manage their wide-spread, others tuck them between the wing, and others again bring contained several yards of flannel, them together beside the front edge of enough to keep off the rheumatism all the wings. This latter action means perfectly comfortable.

The first morning thought of a butlittle town, all because of the dog that terfly is to search for honey. For white skin is not very important in a may be accomplished. THE COST AND THE GAIN.

The farmer has been well informed on these matters, and well knows that in order to produce good crops he must resort to the remedies, but he hesitates when the cost of the labor and materials are estimated. The cost will depend, however, on the amount of beneot derived. It may be anything but economical to allow the crop to be destroyed because the expense for remedies and their application must be met, but it has been demonstrated that there is a large gain over the cost if the crop is treated at the proper time, and this gain depends upon the varieties of potatoes planted, as fruch as \$11.50 per aere having been gained by the use of remedies compared with crops treated diff rently, as this profit was estimated after the cost for remedies had been deducted. There are occasions when remedies are used needlessly, but farmers must learn how to avoid so doing, What is necessary is to attack all fungi early in the season and keep it away from the crop. By so doing the expense of treating the crop later will be saved. When the potato beetle must be destroyed the combination of Paris green and Bordeaux mixture may coninue as a preventive of blight and sure to destroy beetles. A knowledge of the fact that these two remedies can be advantageously combined will effect a great saving in labor and time.

> spot. It means determining the geographical features of a very large area parts of the ocean, and certain other of the polar regions, which has as yet recurring signs, which the helmsman been unexplored. What is the use of discovering the pole? What good was the wreath of leaves that was prized in gether. For instance, if in standing the Olympic games? In value the discovery of the north and the wreath are the same-they represent the intelligence, the energy, the courage, the endurance and the indomitable will that of Magellan, -St. Nicholas, climb over every obstacle.

Up to a year ago there were three possible ways of reaching the north pole. One was by the route advocated by Dr. Nansen, his theory being to put a ship into the ice north of Siberia and drifting, perhaps to, or at least near, the north pole. The second route was via Franz Josef Land. That land. Reflection is a key that unlocks the | when discovered in early '70s, was supgreat arctic archipelago. The third, safe for all ages, pleasant to take, and, to make the grade ou which it is to be and what may be called the American route, developed by American explorers, is along the northwest coast of Greenland, which is longer to be regarded as a great continent.
