rized the Sinaloa and several of the

explosion came.

When she makes the dear demand; And although her glove be roomy, She is not a bit remiss. With a smile she always murmurs: "Jack, will you please button this?"

A LUCKY BULLET.

"This silver bullet three times has saved my life, and it had a history when it came into my possession. Do you wonder that I wear it as a talisman?" said Senor Don Faustino Ortega of Sinaloa, Mexico, talking with two friends in the reading room of an uptown hotel. He speaks excellent English, and as he said this he held up to view the battered silver ball which he carries always strung by a gold wire to his watch guard

"It weighs just an ounce," the Senor Don continued. "It was given me by my grandfather, who told me the story of it when he put it into my hands on his dying bed. He was clear of mind, and I could not doubt a word of his story, strange as it may sound to you. 'It was more than fifty years ago,' my grandfather said, 'that a monster wolf appeared at my ranch on the San Ysidro and destroyed many sheep and calves and colts. My herders chased would not retreat before one man. My banishment of President Lerdo, ter- mas Viejada." lomo sent word of these things to me, and I went to the ranch. Three adjoining States of the Mexican replus of \$43,000,000 different times I fired at that wolf, feel- public. He had been one of Lerdo's ing sure every time that I must have partisans and was very bitter toward hit the creature, but it trotted away whoever was prominent as a supporter with no sign of hurt. When after my when I fired, I gave up trying to kill who was learned in such matters. He which to pay my men. Being delayed heard my story.

"'Make a bullet from the first silver you find,' he said. 'Scratch upon it a Christian cross and try the wolf with that. If your aim be true, the bullet will not fall flat like the others.

"The rest of the story I will tell in my own words. My grandfather made the wis: man a present and started to tell me. back for the ranch. Crossing the channel of the San Ysidro, at that season of DEPOSITS RECEIVE: IN LARGE AND SWALL the year nearly dry, his horse stumbled, and where his hoof had disturbed the or hold you captive for a ransom. All Around the Farm-

Dairy Commissioner Noble, of Connecticut, reports that the average yield of milk per cow in that state in 1860 was 277.2 gallons, while in 1890 it had increased to 425.4 gallons.

The proper way to clean a hen roost is to first carry everything out doorsroost poles, nest boxes and loose boards. Give them a dose of oil and apply the match. If the wood takes fire it can be put out by throwing sand on it. Now rake out all the fowl dirt, and give the inside a good coating of whitewash. Do this once a month,

When young men tell you they never read experiment station bulletins, that they take no stock whatever in the farm institutes, and, at the same time, they are about to be sold out under mortgage on a farm their old father gave them free of debt, there is something wrong in the brain machinery of those men and no mistake.

It is not so generally appreciated as it should be that the breeding sow while she is bearing her young needs lust the kind of nutrition that the growing pig will require. Sows fed heavily on corn, fatten, and bring thin, stunted pigs, with very little ability to care for themselves. Such pigs will never do so well as those whose dams were fed milk and wheat bran with some kinds of roots while bearing their young. These will have good digestion, and will grow rapidly, while the stunted pig will never fully recover from the improper nutrition it received before it was farrowed.

At a recent annual convention of the

A haif-dozen small tubs holding not more than eighteen or twenty quartare best for use in caring for human excrement. A box filled with dry soil near by, with a small shovel to distribute this soil over each addition of excrement, will entirely prevent any offensive odors. When the tub is flilled, or so nearly so that it requires dumping, its contents should be deposited in a large receptacle where they will ferment under the cover of more soil. In a year's time this excrement mixed with soil will be converted into a fertilizer with very slight odor, and which may be easily applied to the creps hose growth it is desired to hasten. cient in phosphates and potash. If these minerals are added to the heap in soluble form they will add greatly to its value as a fertilizer.
