A Russian Royal Wedding.

The recent marriage of the Grand Duchess Anastasia—the daughter of the Dake Michael Nicholaievitch, governorgeneral of the Caucasus—to Prince Fig. deric of Mecklenburg-Schwerin, in describad as follows :

A distinguished company assembled in the winter palace at 12.30 o'clock, among those present being the members of the ecclesisatical synod, the superior clergy, the council of the empire, senators, the diplomatic body, the chief officers of the army and navy, and representatives of the mercantile classes. The ladies appeared in the Russian national costume, and the gentlemen in full dress or uniform.

The bride and bridegroom were received in the magnificent apartment strate certain mooted questions regardknown as St. George's hall, and conducted to the chapel within the palace, where they were met by the emperor and empress, whose appearance was saluted by 101 guns from the fortress opposite the imperial residence.

The Grand Duchess Anastasia wore over her wedding costume a superb crimson velvet mantle lined with ermine, the train being supported by four chamberlains and the master of the ceremonies attached to the household of the Grand Duke Michael.

At the chapel Prince Frederic and his future consort were received by the metropolitan of Novgorod and St. Petersburg and the members of the synod, and the inferior clergy carrying the cross and the holy water.

The emperor led the bride and bridegroom to their respective positions, and the rings having been brought to the altar beforehand, on good plates, by masters of the ceremonies, were placed on the fingers of the exalted couple by the imperial confessor, while the crowns were held over their heads by high dignitaries of state.

Upon the conclusion of the Greek celebration, the grand duchess and Prince Frederic returned thanks to the emperor and empress and their parents, and after a Te Deum had been sung and a salute of 101 guns had been fired, received the congratulations of the assembled guests.

Next came the marriage ceremony according to the Lutheran rite, which was performed in the Alexander hall, after which the bride and bridegroom were conducted back to the imperial apartments of the palace.

At 5 o'clock a grand banquet was given in the Nicholas hall, at which the following toasts were proposed, each accompanied by salvos of artillery: "The Emperor and Empress," "The Newly-married Couple," "The Parents of the Bridegroom," "The Parents of the Bride," "The Imperial Family," "The Clergy," and "All the Emperor's Faithful Subjects."

At 8 30 o'clock a grand ball took place in St. George's hall,

New Cotton Dress Goods.

A quaint novelty among cotton goods for spring and summer dresses is called mmmmy cloth, and resembles in its rough printed surface the mummy cloth upon which tidies and covers are embroidered. The choice designs come in oft faded colors, such as pale blue with olive in stripes, one of which has sprays of flowers upon it. Some have two or three shades of olive foliage forming stripes; others have ivory and moss stripes, or else blue and pink sprays. The merchants test these colors by having them washed-not with great care, but, as they say, "washed to fade"—and these washed samples are shown to purchasers to prove that the stylish faded colors are as faded as they ever will be. This mummy cloth is a yard wide; fourteen yards are sold for a short,

simple dress. Coteline is a stiff, half-transparent cotton fabric woven in lengthwise reps or cords that make it very durable. It comes in cool, clean patterns of bluegreen or a green-blue spray on white, or in chintz colors on cream grounds, or in stripes of the favorite Sevres blue with

olive green. Printed armures are also new cotton goods. The white ground has raised threads like the brilliantines formerly worn, and is strewn with pale-tinted small flowers and foliage. The zephyrs are Scotch ginghams made by Glasgow houses in contrasting colors for plaids and stripes, such as pink barred with blue, or blue with green, or red with which was to be controlled by another white and black. The Scotch tartens assistant. The professor next placed a are also shown in these goods. A great deal of the Russian braid lace is being imported to trim these pretty zephyr ginghams, - Harper's Bazaar.

Hints on " Every-Day Cookery." Miss Juliet Corson delivered an interesting lecture on "Every-day Cook- to the end of which was a small silver ery" at the Copper institute, in New York. The great hall was filled, and a number of ladies and gentlemen occupied seats on the platform, among them being Mr. Peter Cooper. Prof. Ray-being arranged and in the hands of the mond provided the apparatus with which a number of excellent views were thermometer before him, and said: thrown upon the large canvas at the back of the stage. Miss Corson said it | every action be performed steadily and which, she claimed, was by no means so expensive as was generally supposed. by the flowing it is not coagulated, and is, Miss Corson said, the pride of the vein it indicates that we have the body French housekeeper. For her market at ninety-eight and a half degrees F., table. In this connection, views of a model set breakfast, dinner and supper table were presented on the canvas, and great sympathetic. The former comes Chew Jackson's Best Sweet Navy Tobacco.

a number of hints were given of the from the base of the brain in a certain simplest and most inexpensive methods beautifying a table. Miss Corson in the abdomen. closed by impressing upon her young lady hearers especially the necessity of emperor of Russia's brother, the Grand politeness and good manners at the

BRING NO THE DEAD TO LIFE.

Starting Experiment in an Indianapolis College-New Life Infused into the Body of a Victim of the Hangman.

It was after eleven when the professors students, came up. The interview lasted some moments, and our reporter gave such accurate proofs of a knowledge of what was up that it ended in his being invited to witness some experiments that were about to be performed to demoning the physiology of the brain and spinal cord, as well as the power to resuscitate persons hanged or drowned. The dissecting-rooms-a suit of not very large rooms-were crowded with narrow red tables, upon which were twenty or thirty human bodies in various stages of dissection and decomposition.

All being ready, we surrounded the tub, as the cover was removed, to have a view of the body of the man who, at 12.20, had been declaring his innocence at the jail, and who had fallen through the hangman's trap. The head and beard had been shaven; the face was not so swollen and black as when exposed to view at the undertaker's in the afternoon; the hot bath had softened the distorted features.

All things being ready, the professor adjusted the head-straps of the Savers apparatusd an commenced drawing upon the cords, which pass over a series of pulleys at the top of the tripod. The body of the murderer was thus drawn upward at full length by the head, until the toes rested in the tub. Instantly the assistants rubbed the body briskly with coarse towels for two minutes, and then wrapped it, from the shoulders down, with a warm blanket.

"I desire," said the professor, "to reduce the dislocation of the bones of the neck by this hanging by the head. This man died simply because the second bone of the neck was pulled away from the first, which is like a thin, flat ring, supporting the skull. This second bone has a tooth-like prominence or pivot, upon which the head turns. If this pivot is pulled out, that is suspending all the vital force which should keep this man alive, the pivot is pressing upon the spinal cord, and that pressure produces paralysis of breathwith clotted blood, and all the machinery becomes stopped."

During this time the two professors were drawing the body in various directions, and were manipulating the head and neck without success. The body was then removed to a table and placed upon its face, with the arms drawn up under the forehead, when the professor of anatomy, with a narrow chisel, made a gash in the neck where it joins the head, and with two short, quick blows that were pressing upon the cord, like cutting a ring that has become too tight. Then the body was turned upon the back. Taking up the detached nozzle of a large bellows, the professor of physiology proceeded, working and talking at the same time:

opportunity of showing how far vital lungs must be filled with air."

Taking up a sharp knife, the professor cut down the windpipe from what is large as, an old-fashioned knitting appear in the medical periodicals, needle. To this he attached, on a head The experiment concluded by pail of water, all of which had been heated to 100 degrees Fahrenheit. From the jar (piaced a little above the table, about five feet distant) ran a rubber tube one-quarter of an inch in diameter, tube, with stop-cock attachment. The wires of the battery were now uncoiled, and very delicate platinum-pointed needles were fixed. All this apparatus

"Now, gentlemen, we are ready. Let was her intention to give some insight quickly as I direct. I now open the into the charms of French cookery, right jugular vein, and permit what blood there is in it to escape. You see In fact, economy in household matters as I thrust this thermometer into the ing she will purchase a few fresh vegetables, a crisp salad, a little meat or being in health. I will now attach this fish, or a portion of a chicken-just small silver tube in the vein, which, of enough of each to make the desired course, connects it by this siphon tube meal—and as every particle must be with the jar of defibrinated warm sheep's utilized, there is no margin for waste. blood and milk. I keep the stop-cock The chief reasons for the excellency of French cookery, Miss Corson said, are the charcoal fire, the earthen pipkin, and the comparative scarcity of materiator. als, which, in consequence, necessitated | when the air is exhausted in the receiver the most economical treatment. In the clotted blood will be drawn out. cooking food, the first consideration is You know that needles, sharp, narrow to reduce it to a semi-fluid state without | blades, and even arrows, have pierced losing any of its nutritive properties, the walls of the heart in living animals Pood thus softened is prepared for the frequently without producing death, easy action of the digestive organs, because apon their withdrawal the con-Brolling and stewing are the most ex-travagent ways of cooking meats. Bak-ing has a derited superiority over each in the matter of economy. After having shown her audience how to cook food, she proceeded to describe the proper arrangement for stimulating the nerves way in which it should be served on the which preside over respiration, the

spot; the latter will require an opening

The professor then took up a small diamond drill, not larger than a horsehair, and perforated the skull at two points, an inch apart, at the base of the brain, into which he thrust the two delieste platinum points of the battery. At the moment these entered several persons remarked that the chest had moved, as if in respiration. The bellows was detached, and, sure enough, a quantity of bloody-looking froth and mucus was being forced out of the windphysiology and anatomy, with four pipe. This was all drawn out with a syringe, and the professor proceeded to the last arrangement of the poles of the smaller Bunson to the sympathetic nerve—"solar plexus," as he called it. And now came the trial, which all awaited in breathless anxiety. The professor of anatomy took charge, of the jars of blood and milk, and was to turn the stop-cocks to let it flow into the jugular vein, and thence into the heart, as the professor of physiology was to empty the blood clots from the heart with the aspirator or air-pump at the same time. Another student was to inflate the lungs with the bellows by a slow, easy motion, not more rapidly than eighteen times a minute. Another assistant was to move a scape-valve on the bellows tube, so that when the lungs were filled it might empty itself of bad sir, without blowing back into the bellows. Two other as sistants stood by the batteries to make the connections at the word. At the word "Now" every well-

trained head and hand began to workall in harmony-and quietly. No sound at first but the slow wheezing of the bellows, and the measured "thud! thud !" of the piston of the air-pump. The clotted blood from the heart poured into the receiver at first like a brown jelly, which, after a few moments, was thinner; at last a stream of thin, warm blood. It was noticed that the blood mixture in the jar was perceptibly lowering. The professor of physiology lowering. The professor of physiology withdrew the aspirating needles, and stood with dilated pupils and flushed face. The chest of the dead man was moving regularly. He grasped the pulse, and said in a whisper: "A tremor! a tremor!" And then, applying his ear to the chest for a moment, sprang up and cried out in an excited manner: "By heavens it moves! I can feel its pulse?" A shout went up from every one, but followed in a moment by a deathly stillness, for the swollen eyes of the dead were seen to roll in their sockets, and each one looked at the other as much as to say, "What have we done in restoring this man to life and suffering, and the heart becomes crowded ing?" The battery at the heart and abdomen were now disconnected, and all the semblance of life was observable. Nearly two pints of the blood-mixture had entered the veins. This was now cut off and artificial respiration kept up. The pulse could be counted, irregular, and over 100 per minute. The face of the subject was no longer livid, but r ther pale. The eyelids were half-closed, and the eyebalis rolling; the pupils were discovered contracting and head, and with two short, quick blows dilating according as they were shaded from a mallet split the two upper bones or exposed to light. Some nitrite of amyl was held to the valve of the bellows, for breathing was not through the mouth or nostrils, and instantly the heart beat more steadily, the face became of better color, and the chest jerked as if there was a desire to cough. At this juncture the professor of physi-

"Gentlemen, this subject affords an ology said:
"Gentlemen, our experiments thus actions may be suspended and again re- far are successful. This man is living stored. All this man's organs are per- again, but can have no thought, because feet, but all his vital energy is lost. To the mass of brain is too nearly severed restore it we must make the heart beat from the cord. No act of will, at least, again; the coagulated blood must be re can be performed. The spinsl cord is moved from the heart cavities; and the | itself the motor center of the body, and as long as we keep up artificial breath-

ing the body will live."

He then proceeded to drill several known as Adam's apple to the hollow over the breast-bone. With a sharp steel hook he raised the windpipe, split the brain with the galvanic points, it open, and inserted the nozzle of the which caused the legs to jerk, the hands bellows, making it fast with a silver wire around the pipe. This done, the handle of the bellows was put in charge scription of the anatomical points and of an assistant, while the professor took up a long hollow needle or tube, half as fully taken down, and will doubtless

The experiment concluded by withat one end, a rubber tube one-quarter drawing the bellows, and closing the P.O.Box 423%. of an inch in diameter and three feet opening in the windpipe by adhesive long. This was attached at the other plaster, and all were startled by a sudend to a glass jar or receiver, and the den cough from the dead man, and a receiver was attached to an air-pump, rolling of the head, with mouning sounds like one exhausted by suffering. assistant. The professor next placed a This was followed by convulsive action gallon jar, containing a mixture of de in the limbs, a fixing of the eyes and fibrinated sheep's blood and milk in a appearance of a second death. The body became cool in twenty minutes. The whole experiment lasted from 11.30 P. M to 12.20 A. M., or fifty minutes .-Indianapolis (Ind.) Herald.

> An exchange says: "Kerosene will make tea-kettles shine as bright as new." "Yes," remarks another paper, "kerosene will do wonders; it will make a whole house shine so that it can be seen for miles, but it is dreadfully destructive to paint."

The grand secret of Russian valor-There's so much "itch" to their names it's no wonder they "come up to the scratch.

Dr. E. B. Foote's Health Monthly says one of the most frequent causes of baldness is the practice of wearing the hat when it is not needed. "This practice heats the scalp, brings on scalp diseases, and as a result the hair falls." To prevent baldness the Monthly advises persons to keep the head agreeably cool, avoid head-coverings except when going into the cold, and to live hygienically.

Nerve Inquietude and Its Remedy. Restless nerves, at least those that are constantly so, are weak ones as well. The true way to tranquilize them thoroughly is to strengthen them. It may be, nay, it very often is neceseary to have recourse to a sedative or even an opiate, in dangerous cases of nervous inquietude: but the continued use of such unnatural palliatives is greatly to be deprecated. Though not, in a restricted sense, a specific for nervousness, Hostetter's Stomach Bitters is eminently calculated to allay and eventually over-come it; a fact which the recorded experience of many goes to substantiate. This inestima-ble tonic, by promoting digestion, assimilation and secretion, touches the three key-notes up-on which the harmony of all the boddy organs depends, and the result is that fresh stores of visitity are diffused through the system, of which the nerves receive their due apportion ment, and grow tranquil as they gather strength.

The Value of Time.

As in a fire the loss greatly depends upon the time required for efficient aid to arrive, so the result of catarrh greatly depends upon the speedy use of efficient remedies. For over a edy has been the standard remedy. The posi-tive cures it has effected are numbered by thousands. Each year has witnessed an incrossed sale. Its reputation is the result of superior menit. If the disease has extended to the throat or lungs, Dr. Pierce's Golden Medical Discovery should be used with the Catarrh Remedy. These two medicines will speedily cure the most stubborn case of catarrh. See the People's Common Sense Medical Advisor, a work of over 980 pages. Price. \$1.50.

Address the author, R. V. Pierce, M. D., Buffalo, N. Y. Gaps made in the fissh by abscesses and ulcers speedily disappear without leaving a sear, when Henry's Carbolic Salve is the agent employed to heal them. This standard article cures the worst scres, eradicates cutaneous eruptions, relieves the pain of burns, banishes pimples and blotshes from the skin, and has proved to be eminently successful in rem dying rheumatism and soreness of the throat and chest. Sold by all druggists.

For upwards of thirty years Mrs. WINBLOW'S SOOTHING SYRUP has been used for children with never-failing success. It corrects soldity of the stomach, relieves wind colic, regulates the bowels, cures dysentery and diarrhoa-whether arising from teething or other causes an old and well-tried remedy. 25 cts. a bottle.

AN EXTENDED POPULARITY. - Eich voar finds "Prown's Bronchial Troches" in new localities in various parts of the world. For 15fleving Coughs, Colds and Throat Diseases, the Troches have been proved reliable. Twenty-five cents a box.
