DYSPEPSIA AND INDIGESTION. ALLENSVILLE, MIFFLIN Co., Pa. Dear Sir-This is to certify that your Indian Blood Syrup has entirely cured my wife of Dyspepsia and Pain in the Stomach. SAMUEL L. BYLER.

UNANIMOUS RECOMMENDATION. The following persons have used the Indian Blood Syrup, and add their testimony in its

Moses Strome, of Lebanon, says: "It entirely cured me of Rheumatism and Head-

Joseph Biner, of Cornwall, says: "For years I suffered with Pleurisy and Liver Complaint, and a short trial of the Syrup cured me.

Mrs. Reuben Eckerd, of Lebanon, cured of Dyspepsia in its worst form. Henry Smith, of Lebanon, says: "My wife

and child have been entirely cured of Scrotula by the use of the Blood Syrup."

Wm. Donley, of Bismark, says: "It cured

Mrs. Levi Young, of Manheim, relieved of Heart Disease, after the doctors failed.

adds: "We can't guess her, but will

never give her up-no, never. Mrs. Marietta K. Benchley, widow o Henry W. Benchley, who was lieutenant governor of Massachusetts shortly betore the war, died recently in New York and willed her brain to Dr. Lozier, and her skeleton, after dissection, to the woman's medical college.

A lady of Evansville, Ind., who had been grossly insulted several times in the streets of that place, finally drew a hatchet and sunk it in the cheek of the insulter, cutting through to the bene. This is one way to bury the hatchet,

and it was a pretty good one. Marie Louise, the second wife of the great Napoleon, was in the habit of amusing the ladies of her court at their private soirces by turning her ears almost completely round, and in a manner closing them up. She did this by a peculiar motion of the jaw, and she is said to have prided herself on the explose not a little

ploit not a little. A pretty miss of eighteen, who belongs to a good family in Utica City, Ind., and has been well educated, has recently been released from jail, where she was awaiting trial tor kleptomania. The most influential people in the country united in an appeal for the dismissal of the indictment, and the court gladly acquiesced in a nolle prosequi.

The enormous quantity of so-called kid gloves is greatly in excess of the amount of leather afforded by the skins of all the young goats annually killed to supply the demand. There has long been quite a trade carried on in Paris by the gamins in rat skins, who have much profitable sport in catching them at the mouths of the great drains of the city. Real kid skins come from Switzerland and Tuscany.

An Avalanche of Peat.

When the brief statement first appeared, a few months ago, that a town in the Falkland Islands had narrowly escaped destruction by a flood of peat, the story seemed incredible. Authen-tic details, however, have lately reached England which leave no doubt of the fact. The phenomenon is believed to be unprecedented, and has served to attract the attention of men of science once more to the archipelago of treeless islands which Darwin explored nearly half a century ago, and which consti-tute Great Britain's southernmost colo-

The Falkland group is situated some three hundred miles from the eastern coast of South America, opposite the entrance to the strait of Magellan. Two of the islands, known as East and West Falkland, are much larger than the rest, and upon the east side of the former is Stanley, the chief town. There seems to be some influence in the climate peculiarly favorable to the production of peat, for, says Mr. Dawin, "almost every kind-or plant, even the coarse grass which covers the whole surface of the land, becomes converted into this substance; scarcely any situation checks its growth; some of the beds are as much as twelve feet thick, and the lower part becomes so solid when dry that it will hardly burn." Thus, it will be understood, a peaty soil is characteristic of the whole country.

Just back of the town of Stanley, and about 3,000 feet inland, rises a range of heights which are surmounted by a plateau, upon which rests a deep bog of peat. Curiously enough, the thickest deposits of peat in the Falklands occur on the hillsides or hilltops. In other places the peat seldom exceeds a few feet in depth. The subsoil is a dense yellow clay impenetrable by water, and in the Stanley bog already mentioned this is between twenty-four and thirty feet below the surface.

On Nov. 26, 1878, a southeasterly storm of wind and rain set in at Stanley, and the rainfall from that time until mid-night of the 30th is estimated to have been two inches. Then the peat bog on the heights above the settlement gave way. "The black oozy mud." writes a naval officer to the royal geographical society, "rolled down the hill with a momentum which neither the iron stanchions around the reservoir nor the barrriers by the sea could withstand. It broke through the backs of wooden houses, inundated the rooms, and obliged the inhabitants, rudely awakened from sleep, to flee for safety; a few pigs and calves were swallowed upin the irresistible stream, but fortunately no human lives were lost." The velocity of the stream was not noted at first, but in the morning, after its force was almost expended, it was still moving into the sea at the rate of about half a mile an hour.

Dr. John Mulvany, staff surgeon in the British navy, was an eye-witness of the phenomenon, and attributes it to the action of the heavy fall of rain upon the peat. He estimates that over 500,000 gallons of water fell into the bog on the four days preceding the avalanche. The impermeable yellow clay under neath would not permit it to sink through, and finally this enormous quantity of water, mingling with the peat, burst the weakest side of the bog and rolled down the seaward slope of the heights above the town in the remarkable torrent we have described.

History of Billiards.

A New York paper says: Billiards are played so much in this country that the game is not unfrequently mentioned as American, although its origin is either French or Italian—it is uncertain which. The game, however, was imported into Britain from France, and was known to Englishmen by name as early as the sixteenth century, since Shakespeare speaks of it-he seems to night. have been little less than omniscient-in several of his dramas. He even portrays Cleopatra as amusing herself with bit liards, but this is unquestionably one of the palpable anachronisms to which he appears to have been indifferent, and which he scattered throughout his plays. The game itself was, in all likelihood, medieval, but as played nowa-days is comparatively modern. For two centuries it was played with only two (white) balls, and when the third (red) ball was imported into Britain, the red winning hazard, or holing of the red ball, was well-nigh the sole ob-ject of the players. The billiard-table of the present is as different as it well from the billiard-table of two hundred years ago, as persons know who have noticed their evolution as represented by the tables of divers eras. The greatest billiardists are the Russians, Spaniards, French and Americans, who now play far more than any other nation. The popularity of the game has increased greatly here within the last twenty years. It is said that there are six times as many tables in the country as there were at the beginning of the civil war. Europeans suppose that all Americans play billiards, irrespective of sex, age or position.

FARM, GARDEN AND HOUSEHOLD.

Farm Notes. Dark stables are injurious to the eyes of horses.

No other animals should be tolerated in a yard with sheep, for it will only result in vexation and loss.

A bag of hops as large as the two fists, placed in a bin or store of grain, will, it is said, kill or eradicate all grubs and in-sects from the grain. The dead ones can be removed by fanning.

Shelter is one of the first objects in wintering sheep successfully. Farmers often condemn barns and sheds as unhealthy places for sheep, when it is a want of ventilation that does the injury.

Milk paint for fences or barns is made by mixing water lime with skim milk to a proper consistency to apply with a brush. It will adhere well to wood whether smooth or rough, to brick, mortar or stone, where oil has been previ ously used.

A farmer in Bangor, Me., observing that wheat was being picked from the seeds of standing grain, and seeing at the same time flocks of yellow birds flying about, shot some of them. On opening their crops he found only three grains of wheat, and by actual count 350 weevils,

Particular care should be used in cleaning milk pans and cans. Many cases are on record of diseases in famiies from using milk infected with noxious germs from foul milk cans. Milk-men upon again receiving the cans should cleanse them with boiling ho

Cattle like a change of diet occasion ally, as men do. Keeping cattle on hay or straw alone is a little like living on bread or potatoes, or meat alone, with nothing except that one dish. Therefore feed some roots, as well as hay and meal or shorts. If you haven't the roots on hand, be sure and have a supply next

Cabbage has a superior value for feeding purposes. English cattle feeders assert that their beasts progress faster on cabbage, mixed with plenty of fine-cut wheat straw and cotton cake, than with any other vegetable. Cabbage contains one part flesh-forming substance to three of heat producing, while in potatoes, the flesh-forming is only one to twenty. Cabbage is also rich in mineral matter

|Household Hints.

Soft soap should be kept in a dry place in a cellar, and shou d not be used for three months after it is made.

A French chemist asserts that if ten be ground like coffee immediately before hot water is poured upon it, it will yield nearly double the amount of its exhilarating qualities.

To preserve the aroma of coffee, add the white of one egg to every pound of coffee just before it is quite cold. Stir it thoroughly into the mass, so that every berry will be wet with it.

To clean lamp chimneys, hold them over the nose of the teakettle when the kettle is boiling furiously. One or two repetitions of this process will make them beautifully clear. Of course they must be wiped upon a clean cloth.

Table cloths should be but slightly starched, and folded lengthwise, after ironing quite dry on the right side, first down the middle, then putting each selvage edge to the center, pressing them down on the right side; next placing the two double parts, thus folded, to-gether, and then doubling the other way in the same manner.

To wash a black and white cotton dress, have a tub partly filled with hot water, add one large tablespoonful of powdered borax; wet only one part of the dress at a time, the basque first; use very little soap, and only on the most soiled places; wash quickly, rinse in warm water containing a tablespoonful of table salt; starch on the wrong side, wring very dry, shake out well, hang where it will dry quickly; next wash the overskirt and then the under-skirt in the same way.

Health Hints.

Glycerine is excellent to rub on chafes burns or chapped hands or sun scalds. Olive or sweet oil mixed with warm milk and water, and drank plentiful until it acts as an emetic, is an antidote to

poisons in general. Laws of Life says simple remedies are frequently the best for headache. A cup of sour mi'k spread upon a thin citth and applied to the head will many times give relief. Or, a mild mustard plaster on the back of the neck will often ease the pain, or drinking a cup of

het water. Temporary relief from a painful sore corn may, says an exchange, readily be obtained by applying strong carbolic acid. Take the cork out of a small bottle of carbolic and apply it (the cork) to the corn. Relief will come at once, and you will be able to walk with comparative comfort till you can find time to remove the corn with a knife.

How to Make Cows Give Milk. If you desire to get a large yield of rich milk, give your cow every day water slightly warmed and slightly salted in which bran has been stirred at the rate of one quart to two gallons of water. You will find if you have not tried this practice that your cow will give twentyfive per cent, more milk immediately under the effects of it; and she will be come so attached to the diet as to refuse to drink clear water unless very thirsty. But this mess she will drink almost any time, and ask for more. The amount of this drink necessary is an ordinary water pailful at a time, morning, noon and

A Female Bandit.

The district of Saranzaro, in Souther Italy, has recently been overrun by horde of bandits, under the leadership of a lovely damsel, Maria Croci. Thi adventuress, whose personal attractions are reported to be little short of soulsubduing by those who have been fortunate enough to escape from her clutches, was formerly the bride of a mountaineer, who occupied a distinguished position in the band at present commanded by her. This fellow met with his death by the rifle of a carabiniere, whereupon his afflicted betrothed picked up his gun, raised it toward heaven, and vowed to avenge his cruel fate. Elected captain of the association by her departed's comrades, she has become the terror of the whole district, where she has earned a reputation for ubiquitousness, by the rapidity of her movements. She burns a farmhouse one day, plunders a church the same night, and carries a nunnery by assault before she retires to her well-earned remanaged to evade them.

John Milton and His Daughters.

And surely it is his simplicity alone that can excuse his conduct to his daughters. Milton's Oriental views of the function of woman led him not only to neglect, but to positively prevent, the education of his daughters. They were sent to no school at all, but were handed over to a schoolmistress in the house. He would not allow them to learn any language, saying, with a sneer, that "for a woman one tengue was enough." The Nemesis, however, that follows selfish sacrifice of others is so sure of stroke that there needs no future world of punishment to adjust the balance. The time came when Milton would have given worlds that his daughters had learned the tongues. He was blind, and could only get at his precious books—could only give expression to his precious verses through the over and cious verses—through the eyes and hands of others. Whose hands and whose eyes so proper for this as his daughters. He proceeded to train them to read to him, parrot-like, in five or six languages, which he (the schoolmaster) could at one time have easily taught them, but of which they could not now understand a word. He turned his daughters into reading machines. It is appalling to think of such a task. That Mary should revolt, and at last, after repeated contests with her taskmaster, learn to hate her father—that she should. when some one spoke in her presence of her father's approaching marriage, make the dreadful speech that "it was no news to hear of his wedding, but if she could hear of his death, that were something"-is unutterably painful, but not surprising .- Atheneum.

The Denver (Col.) Herald says the mines of Colorado last year yielded \$25,-335,483, and that the estimate for 1878, adopted by the mint authorities in Washington, placed the State's gold and silver product for the year at \$8,751,344, to which Superintendent Herman Silver, of the Denver mint, added \$500,000, as the value of shipments sent East through private sources, thus placing the highest reliable estimate of that year's product nt \$9,251,344.

A subscriber in the Norristown Herald asks: "Will the last shoe be made on a shoe last?" The Herald says we must re-fer him to Proctor. He is the only person in the country-we believe he is still in this country-who knows what is going to happen 160,000,000,000,000,000,000,000 years hence.

Iron bolts in wooden structures may be kept from rusting by coating the holes in the wood with zine filings and grease. The iron is thus galvanized, and is preserved from oxidation.

Scientists may Differ
About the pathology of rheumatism, its origin and whether it be hereditary, but irrefragable testimony proves that when a tendency to it develops itself, Hostetter's Stomach Bitters is a reliable means of subduing that tendency. Some of the prescribed remedies for the dis-ease are decidedly objectionable from the dan-ger attending their use, others are utterly ineffectual, the best, the safest check is the Bit ters. This very obstinate malady, the more effectually to overcome it, should be grappled with at the outset. Every one knows what terrible, what ceaseless pain it can inflict. Why then, should this atrocious, often fatal complaint be allowed to gein headway through indifference to its earliest symptoms, when a safe, long tested and strongly recommended medicine presents itself. In addition to sug-gesting this a means of relief it seems not in appropriate to caution the rheumatic agains

The Best Rubber Boot.

There is nothing better for a farmer or outdoor man than a good rubber boot, and nothing so exasperating as a bad one. Competition among manufacturers has led to such a cheapening of quality that until intely it was a hard thing to find a rubber boot really worth the money asked for it. The Candee Rubber Co. of New Haven, Ct., however, has lately put on the market a boot designed to meet the call for a real good, substantial article, and to denote its freedom from adulterative mixtures it is called the "95 Per Cent. Sterling Boot." It is made, on honor, as pure as can be made, and is warranted three months. By an ingenious contrivance a space is provided at the top of the leg for recording the date of the sale, by punching holes in the spaces provided—like a railroad tiel et—so that there may be no trouble about the warrant. The upper and leg of the "95" Boots are doubled, and the soles are one-ball inch thick, of solid rabber from too to heel. Ordinary rubber boots are barely a quarter inch thick in the thickest part, and only one-eighth at the shank. A descriptive circular can be obtained by sending a postal direct to the company; or the "95" Boots can be found at most of the stores.

VEGETINE .- When the blood becomes lifeless and stagnant, either from change of weather or of climate, want of exercise, irreg ular diet, or from any other cause, the VEGEring will renew the blood, carry off the putrid humors, cleanse the stomach, regulate the and impart a tone of vigor to the whole body.

Dr. C. E. Shoemaker, of Reading, Pa., is the only aural surgeon in the United States who levotes all his time to the treatment of deatness and diseases of the ear and catarrh; es pecially running ear. Nearly twenty years ex-perience. Thousands testify to his skill. Consult him by mail or otherwise. Pamphlet free.

For one cent purchase a postal care and send your address to Dr. Santora, 162 Broadway, New York, and receive pamphlets by return mail, from which you can learn whether your liver is out of order, and if out of order, or is any way diseased, what is the best thing in the world to take for it.

Sherman & Co., Marshall, Mich., want an agent in this county at once, at a salary of \$100 per month and expenses paid. For full particulars address as above.
