Myrtle, dear?" "Yes, George, what is it?" replied

the girl, glancing shyly upward.
The radiant glory of a summer moon shone down upon the earth this Japo night, bathing in all its mellow splendor the leafy branches of the sturdy old oaks that had for centuries shaded the entrance to Castle McMuriry and laughed defiance to the fierce gales that every winter came howling down in all their cruel force and fury from the moorlands lying to the westward of the castle. On the edge of the broad domesne that large brindle cow, and as the moonlight flecked with silvery luster her starboard ribs she seemed to Myrtle a perfect picture of sweet content and almost holy calm.

Is it not a beautiful night, dearest?" murmured the girl. "See how the moonbeams flutter down through the trees, making strange lights and shadows that flit among the shrubs and flowers in such a weird, ghostlike fash-ion. The dell is indeed clothed in loveliness to-night, sweetheart."

"Yes," said George W. Simpson, "this is the boss dell"—and then looking down into the pure, innocent face that was lifted to his, he took in his own broad, third-base palm the I tle hand that erstwhile held up Myrtle's

The noble girl did not shy. "Do you love me, sweetheart?" he asked in accents that were tremulous with tremulousness.

Myrtle's head was drooping now, and the rosy blushes of Calumet avenue innocence were chasing each other across her peachy cheeks,

George drew her more closely to him. the mosquito.

whoa-Emma love that can never die. Do you not love me a little in return?"

For an instant the girl did not speak. George heard the whisking of the brindle cow's tail break in rudely upon the solemn stillness of the night, and ever and anon came the dull thud of the bullfrog as he jumped into a neighboring pond. Presently Myrtle placed her arms about his neck, and with a wisful baby's got the-oramp look in her sweet face, she said to him: "I love you, George, with a deathless devotion that will eventually keep you broke." And with these fateful words she adjusted her rumpled bang and fearlessly led the way to an ce cream lair .- Chicogo Tribune.

The Gray Head by the Hearth.

A private letter from a lady who is ending the year among the peasantry of the Tyrol, says: "The morning after our arrival we were wakened by the sound of a violin and fintes under the window, and hurrying down found the little house adorned as for a feast; garlands over the door and wreathing s high chair which was set in state. "The table was set in state."

whose music we had heard. The whole neighborhood were kinsfolk, and these gifts came from uncles and cousins in every far-off degree; they were very simple, for the donors were poor; knit-ted gloves, a shawl, baskets of flowers, jars of fruit, loaves of bread; but upon all some little message of love was pinned.

"Is there a bride in the house?" asked of my landlord. "We do not

make such a bother about our young people. It is the grandmother's birth-

The grandmether, in her spectacles, white apron and high velvet cap, was a heroine all day, sitting in state to re-ceive visits and dealing out slices from a sweet loaf to all who came. I could not but remember certain grandmothers at home, just as much loved as she. probably, but whose dull, sad lives were never brightened by any such gust of pleasure as this; and I thought we

We remember a certain American house of the higher class, in which the venerable mother of the owner had her own boudoir filled with everything which could recall her long checkered life pleasantly to her in its tranquil old That room was the center of the great mansion; no guest entered the house without desiring to pay his respects to her, although only the most favored were admitted. The effect upon the young people who came to the house of this marked genuine reverence for age was incalculable for good. The new generation is always apt to be intolerant of those who are leaving the stage; apt, too, to slight the experience and opinions. If they do not find their parents honoring age where will they learn to honor them?

Americans are usually affectionate to the aged members of the family; but they lack the tenderness, deference and care which the French show to them, and by which they bring heat and life into their colorless lives. It is not enough to give a neglected seat in the chimney-corner to the gray-haired mother or father; use such devices and tunocent wiles as will make them feel that they have not lost their place among men; that the work which they have done is appreciated; and, above all, that they still have work for others

to the moon.

A Man Who Has Walked 175,200 Miles. George Fawcett completed in April last his forty-seventh year of service in the English postoffice as a rural messenger. From 1835 to 1842 he rode between Sedbergh and adjacent stations, carrying mails in this way a total distance of 67,160 miles. From 1842 to 1882 he has walked daily between Sedbergh and Dent, thus traversing 175,-200 miles. His entire travel as postman foots up 242,360 miles, nearly ten

American bazs.

times the distance round the earth, and

2,360 miles further than from the earth

FOR THE FARM AND HOME.

Trouble with Butter.

Butter is one of the most complicated or, in the other, are they sufficiently is attacked by a species of mildew or fungus, which very soon spreads all minutes. through it. This spoils the flavor of stretched away to the south, stood a the butter. From some troublesome and careful experiments the past winter the writer is convinced that this is caused by too much dampness in the milk-room or cellar and the presence of germs of mildew. The first was cor-rected by putting some fresh lime in the milk-room, which absorbed the excess of moisture, and by burning sulphur in it to disinfect it and destroy the milder germs. By burning sulphur, sulphurous soid is produced, and this is a very active antiseptic and destructive of all kinds of molds, mildews and ferments. It would also be well to look closely to the water drank by the

Asparagus Culture.

Asparagus beds planted in the old polonaise. As they stood there silently in the booky glade George passed his arm silently but firmly around Myrtle's to become either unproductive, or, if productive, the canes are ridiculously small. This may be remedied by cutting out alternate belts through the bed one foot in width, taking out all plants from one belt and leaving them in the next. The trenches cut through the bed should then be filled with humus and manure, thoroughly mixed to-gether, and a liberal dressing of marure worked into the soil on If a mosquito had tried to pass between the belt itself. A very common mis-them then it would have been bad—for take made by gardeners is in having take made by gardeners is in having too little earth above the crowns of the "Can you doubt me, darling?" he whispered. "You surely must know six inches of rich loam above the crown that I love you with a wild, passionate, so that the canes will be bleached for at least four inches before reaching the surface of the soil Plant an occasional crown in a well-enriched plot in the flower garden. The early canes can be cut for the table, and later ones will make a very ornamental cluster during the summer and fall. The old plan of planting in compact beds has now been superseded by the row system, in which plants are set every two feet by six feet. Asparagus, like all other salad plants, must grow rapidly to be good and tender. Hence very rich soil is a necessary requisite to successful asparagus culture .- Boston Transcript.

Hay for Fuel.

A correspondent in the Prairie Farmer, writing from Rogers Park, Ill., who claims to have had experience in hay burning, suggests experiments for the preparation of hay as fuel and expresses a firm conviction that grass treated according to his directions may be transformed into a mass closely resembling coal in all essentials.

This correspondent suggests two experiments for the preparation of hay for fuel. First, pressing green hay fresh from the soythe into bales as for shipping. Press as solidly as possible, and cover at once with dry straw and earth where the bales will be kept free from water, same as a pot ato pit or coal pit, leaving no air hole. After a few weeks and let them dry in the sun. In a few days, according to this correspondent's shed and keep him there until he belief, they will be fit for fuel and almost walks out. In one instance the obstias solid as coal.

The second mode consists in filling a compartment of any build or tight pen or box with green hay, undried, but free from dew or rain. Make the pile as high as possible, cover the top with boards, planks or straw and put on weights of stones or sand to afford compression. Let it remain undisturbed for a few weeks, then expose to turbed for a few weeks, then expose to Gould once spoke of its crop of timothy to quote from the correspondent, "there will be as near an approach to vegetable coal as it will be easy to obtain.

The points to be observed in prepar-ing hay for fuel in the manner described are : First, exclusion of air during the could learn much from these poor heating process; second, weighting the pile to make as much pressure as possible; third, giving the air and sun free access to the pile after a few weeks to dry out the little moisture remaining around the sides. When dry enough for the store the mass is to be cut with a hay-knife or crossent saw and kindled in cubes as coal.

Notes on Harching.

Early layers are always early sitters, and those who want broody hens in January and February, says a correspondent of the Journal of Horiculture, can generally manage it by hatching early, feeding well in autumn, and keeping them in warmish quarters to a little nutmeg; cream the butter and induce them to lay. A quiet nest, with sugar. Beat in the egg yolks, add the a few dummy eggs in it, is useful in pineapple and spice, lastly the whites such cases. There is no difficulty in of the eggs beaten to a froth. Bake having broody hers from the end of without upper crust, January onward. It is always best to allow old hens to sit and settle a few days before putting the eggs under them. From the first they should be in the nest they are going to sit in. Baskets, boxes or places made for the purpose will do. Too much space should not be given; enough for the hen to sit comfortably is all that is wanted. If the entrance to the nest can be closed so much the better. Some advocate having the nest on the ground, others some distance from it; but I have had as fine hatches from the box nests, four feet from the ground, as from the level. The place should be cool, not over draughty, and the ground should al-ways be moist. I do not approve of trusting valuable eggs in woods or outside confined quarters, as foxes are al-ways prowling about. Wi'h young beginners broody hens are often liable to be over attended during the time they are sitting. The less they are disturbed the better. Once a day ours are fed and watered, and after that they are never looked at again until the fol-

it after being a few minutes off; others will stay away for an hour or more. In the one case are the eggs overhatched,

products; its quality depends upon a so? To the first question we answer, no; to the second, yes. So long as the food, the mir of the stable, the water, the milk pails, pans, and the place an hour we never feel alarmed, and if where the milk is set, besides many they do go back at the end of the first other things. When cream becomes five minutes it is just the same. Covered with a sort of pimples all over little difference this may probably make, but I can say it is neither seen as a rule our bens ish or reddish dots or spots upon it, it | nor felt in practice. As a rule our hens remain off their nests about fifteen years,

Farm and Garden Notes.

No system of farming is complete that dispenses with clover as a rotation

It is asserted that nine-tenths of the foot and ankle ailments of horses are traceable to standing on dry plank

Sow mangles, sugar beels, carrots and parsnips as early as possible, and fit the land thoroughly before putting in the

Dr. Augustus Voelcker commends the soiling system and characterizes pasturing as a most wasteful way of keeping

Melons, cucumbers and squashes are cultivated in the same manner, but they should never be planted near each other.

One acre of land well prepared and well tilled produces more than two which received only the same amount of labor used on one. Do not throw away the young beets

that you thin out of the rows. Tops and roots make a delicious sort of greens and are healthy. Self-interest demands that a farmer

should raise nearly all he consumes, which will enable him to pay cash for all he is compelled to buy. Do not turn the manure in too deep,

but we believe in turning it under the

surface as soon as it is put upon the field. Especially is this true for potato land. Every one understands that those hens which are most marked by patience

and gentleness are the best fitted for incubation. Choose a hen in this respect for her stolidity and want of live-The Germantown Telegraph recom-

mends keepers of fowls to grow sunflowers in the out-of the-way places for the seeds, which are excellent for the poultry. And it might have added that the plant is a good protection against

A New England man affirms that if you take a balky horse from the wagon, and with one man at his head and another at his tail, whirl him around in the smallest possible circle, until he is dizzy, he will be cured of talkiness. At least he will be after two applications of the remedy.

Clover seed may be sown on fall sceded fields of r.e. wheat or grass, and the surface harrowed with a light, fine tooth harrow, or rolled with an iron roller, or both, as the character of the soil may demand. If the surface is light and full of cracks and the soil moist most of the seed falling into the cracks will germinate and grow.

The London Live Stock Journal gives two methods of starting a balky horse: 1. Tire your steed out by remaining perfectly quiet until he starts of his when done heating, remove the bales own accord. 2. When a horse refuses nate one was thirty-six hours in the shafts before he gave in."

as the largest he had ever seen.

The best treatment for a mare in foal is to give her moderate exercise daily, care being taken against over-exertion. The food should be good clover and timothy hay, well cut and salted, ground cats, and a bran mash mixed with potatoes or other roots. Feed some corn or meal, but not too much, in order to guard against milk fever. See that the colt promptly relieves the udder soon as possible after birth.

Recipes.

Milk Cakes -One pound and a half of flour, two ounces of butter, a pinch of salt and a teaspoonful of baking powder; roll out the paste thin and divide into flat cakes; bake in a quick

oven. PINEAPPLE PIE .- One large pineapple, pared and grated, one cup of sugar, one-half cup of butter, five beaten eggs.

VEAL PIE.—Line a deep tin pan with a good crust. Parboil the ment and season high, first cutting it into small pieces; nearly fill the pan with water in which the meat was parboiled; sprinkle flour over, add a piece of butter, and cover with a tolerable thick crust. Chicken pie may be made in the same way.

A RICH TOMATO Sour .- Take eight good-sized tomatoes, cut them in half, put them into a saucepan with a bunch of sweet herbs and an onion stack full of cloves, some allspice, whole pepper and Cook them slowly until quite soft, then strain through a strainer or hair sieve until the skins and onions and herbs only are left behind. Have a quart of plain stock boiling hot. Stir the tomatoes into it, add the yolks of two eggs beaten up in a little cold Serve with sippets of toast or fried bread.

NEW POTATOES FRIED. - The smallest of new potatoes, about the size of hickare never looked at again until the following morning. They are fed on grain only. In connection with this there is an other question which often leads to the moon.

Paris has now forty-five English or Imerican bars.

They are fed on grain only the following morning. They are fed on grain only. In connection with this there is an other question which often leads to much doubt, and this is as to what time the hen should remain off the nest.

Young pullets will often rush back to a towel and cook in the hot fat until HEEB CURE. New York.

SCIENTIFIC NOTES

Saplings of the Australian eucalypt grow to the height of fifty feet in ten

Ornithologists differ entirely on the question as to whether parrots require water.

The locomotives on some Russian railroads are heated with crude naphtha, which is introduced into the tender as it comes from the wells.

Gases from the furnaces in iron dis tricts are very injurious to trees in the neighborhood. The sulphuric acid contained in the gases is absorbed in the leaves.

An examination of dogs after the administration of arsenic showed Dr. E. Ludwig seventeen times as much of the poison in the liver as in the brain. He has concluded that in all casses the liver absorbs more of the poison than any other organ, from which it would appear that the liver is the best part to examine in cases of criminal poisoning.

The Sanitary Engineer regrets that the bill legalizing the sale of skimmed milk has passed the State senate. It has had occasion repeatedly to censure any measure of this kind. While admitting that commercial interests ought to be protected, it insists that when it s a question of permitting the sale of an unwholesome article of food the public health demands that such articles as skimmed milk should be emphatically condemned.

When the vessel La Provence, which sank in the Bosphorus, was being raised, the telephone was added to the diver's equipment. Oce of the glasses of the helmet was replaced by a copper plate in which a celephone was inserted so that the dive. bad only to turn his head slightly in order to receive his instructions and report what he had seen. The adoption of this means of communication in diving operations will, in case of danger or accident, tend to, in-sure safety to lives that o berwise would have been sacrificed.

A Judge's Experience.

Judge J. T. Bossier, of St. Tammany parish, La , and of the State Legislature, thus expressed his opinion to one of our representatives: "I have found St. Jacobs Oil to be very efficacious in sprains and bruises. In my opinion there is no oil or liniment equal to it."- New Orleans (La) Times Democrat.

Castle Garden, New York, has become a veritable Tower of Babel, and there is probably no place of the same size in the world where so many languages are conta at the same time.

The result of my use of St. Jacobs Oil for rheumatism is: I have been recommend-ing it ever since, says the Mayor of Chicago, Hon. Carter H. Harrison, in the Chi cago Times.

"Well, I'll be bound," as the man remarked when he heard quoted the line, "Chains of gold are fetters still."

Dr. B. V. Pierce, Buffalo, N. Y.: Dear Sir— I wrote you some time ago that I thought I had a cancer. There was a large lump in my throat as large as a walnut, and had been there four mouths. I commenced taking your "Golden Medical Discovery," "Favorite Prescription" and "Pellets" in June, and the lump is gone. Yours gratefully, Mrs. R. R. CLARE. Irvington, Mich.

An ambitious man whom you can serve will ften aid you to rise, but not higher than his nee; otherwise you might be standing in his

R. V. France, M. D.: Dear Ser-My wife, who had been ill for over two years and had tied many other medicines, became sound and well by using your "Favorite Prescription." My niece was also cured by its use, after several physicians had failed to do her any good. Yours truly,
Thomas J. Mernyin,
Hatcher's Station, Ga.

COMMENDING a right thing is a cheap substi-tute for doing it, and with this we are too apt to satisfy ourselves.

Dr. Piere's "Peliets" (the original "little liver pills") and no pain or griping. Cure sick or billous heafache, sour stomach, and cleanse the system and bowels. 25 cents a vial.
