

FACTS AND COMMENTS.

The cotton factors of St. Louis have united in a circular addressed to the merchants, farmers and tenants of the cotton belt, advising them to abandon the credit system and to discourage the planting of a large acreage in cotton this year, and to devote their labors first to the raising of grain, cattle and hogs, giving a smaller portion of their time to the culture of cotton.

Drunkness has been investigated by Professor Verga, of Milan. According to him, men or women given to intoxication are, strange to say, seldom given to kleptomania or suicide. A woman is less apt to take to liquor than a man, but when she does she can hardly be reclaimed. She becomes shameless and abominable, but seldom dangerous. Cold weather seems to cause men to take to strong drink and mild weather has the same influence upon women.

The son of a Baptist clergyman of Philadelphia went into the army and served through the war, faithfully as an officer and uprightly as a man. When he was discharged, to the astonishment and horror of his friends, he promptly and deliberately became a thief, and follows that calling, serving one sentence after another in the penitentiary, refusing to return to his friends and respectability, declaring that he prefers his present mode of life to any other. The case is one without recorded precedent or parallel.

The swindle planned by a Cincinnati showman consisted in advertising for a treasurer for a minstrel show and getting \$500 from a candidate as pretended security. A country grocer was caught by the prospect of making a tour of the country on a salary of \$25 a week, with all expenses paid, and he supposed that he was safe against fraud because a company was ready to actually start out. But the performers were amateurs, lured into the affair at no cost to the managers, who fled with all the money after the first performance. The grocer committed suicide.

An international exhibition of a novel character is projected to be held in Paris next autumn under the auspices of the Societe Protectrice des Animaux. The catalogue is to include all apparatus, furniture, etc., connected with the breaking and use of horses. It is possible that the exhibition may become extended so as to embrace appliances employed in the relations of mankind with other animals. The corporation of Paris have granted the use of the Pavilion in the Champs Elysees for the month of September next for the exhibition. The society referred to, which has been established over thirty years, now numbers some 6,000 members, and, thanks to its efforts, in few countries is more done than in France for the protection of the animal world.

A specimen of the "angry tree," indigenous to Australia, is growing on a farm in Nevada and is now eight feet high. When the sun sets its leaves fold together and the ends of the tender twigs coil up like a pigtail. If the twigs are handled the leaves move uneasily for a minute or more. A singular thing concerning the tree was its apparent resentment on being removed from a pot, in which it had matured, into a much larger pot. Hardly had it been placed in its new quarters before the leaves began to stand up in all directions, like the hair on the tail of an angry cat, and soon the whole plant was in a quiver. At the same time it gave out an odor most pungent and sickening, resembling the odor given off by rattlesnakes and other kinds of snakes when teased. So strong and offensive was this smell that it had to be removed from the house for several days.

Atlanta has gained greatly by her cotton exhibition of 1881. There has been a continuous inflow of people and capital, and real estate has been in constant demand for residences and mercantile purposes. A grain elevator and cotton compress has been built; a spinning company has completed and nearly filled its spacious building with machinery, and is preparing to double its capacity; the great fair building has been purchased by a company with a capital of \$250,000, and is half filled with machinery; companies have been formed for building apparatus to prepare cotton for the spinner; fertilizer and other manufactories have been established in and near the city; and a concern has been organized for the manufacture of oleomargarine. The aggregate capital invested since the exposition in manufacturing enterprises is about \$1,500,000, employing no fewer than 2,000 operatives, and paying annual wages approximating \$800,000.

According to Professor Langley scientific men are convinced that space is not an utter void, but that it furnishes the carbonic acid gas by means of which plants and animals grow. It is calculated that the earth has absorbed the carbon of the atmosphere one hundred times over, and that its replenishment comes from within the space between the planets. Newton hinted at this, but did not fully comprehend it; two hundred years ago. Once in thirty years the earth is precipitated into meteoric streams. These have been identified with comets. These meteoric fragments, which undoubtedly come from the head of comets, are composed of real sandstone, like that which holds the copper of Lake Superior. It is manifest, therefore, that these come from worlds not unlike our own and that meteors and comets are portions of demolished out-world worlds. This, if true, remarks the Detroit Free Press, is what the inhabitants of the earth must look forward to, and which, though not quite so

definite, is far more formidable than Wiggins' storm.

The *Novoe Wremlo*, of St. Petersburg, recently gave an outline of a remarkably drastic law which it is proposed to enact to lessen the evil of intemperance in Russia. First it is proposed that no drinking-house shall be allowed to be erected in the neighborhood of factories and workshops; that no selling of drink for consumption on the premises shall be permitted except in a limited number of places in the more public and general resorts; that if drink is sold to children and minors, whether with or without their parents' consent, the public house at which this was done shall be closed by the police. Secondly, among the clauses dealing with the customer, there is one which proposes that "every incorrigible chronic drinker" shall forfeit the rights of a father. His children are to be taken away from him and regarded as the children of the state, by which they will be placed in some educational institute, where the father will be prohibited from interfering with them. In the case of an incorrigible drunken husband the project suggests that the courts shall be allowed to grant his wife, upon her own appeal, a species of conditional divorce, with a guarantee of exclusive right to her earnings. Similarly at the request of a husband whose wife is an incorrigible drunkard, it is proposed that he be freed from the obligation of maintaining her and living with her. In neither case is this separation to be counted as a legitimate divorce, enabling the spouse of the incorrigible tippler to contract a second union. We hear that the special commission included a large number of medical assessors.

**The Bad Boy and the Grocery Man.**  
"Say, do you think a little practical joke does any hurt?" asked the bad boy of the grocery man, as he came in with his Sunday suit and a bouquet in his buttonhole, and pried off a couple of figs from a new box that had been just opened.

"No, sir," said the grocery man, as he licked off the syrup that dripped from a quart measure, from which he had been filling a jug. "I hold that a man that gets mad at a practical joke, that is, one that does not injure him, is a fool, and he ought to be shunned by all decent people. That's a nice bouquet you have in your coat. What is it, pansies? Let me smell of it," and the grocery man bent over in front of the boy to take a whiff at the bouquet. As he did so a stream of water shot out of the innocent-looking bouquet and struck him full in the face, and ran down over his shirt, and the grocery man yelled murder, and fell over a barrel of ax-helves, scythe snaths, and then groped around for a towel to wipe his face.

"You blamed little rascal!" yelled the grocery man at the boy, as he took up an ax-helve and started for him "what kind of a goliastid squirt gun you got there? I will maul you by thunder," and he rolled up his shirt sleeves.

"There, keep your temper. I took a test vote of you on the subject of practical jokes before the machine began to play upon the conflagration that was raging on your whisky nose, and you said a man that would get mad at a joke was a fool, and now I know it. Here, let me show it to you. There is a rubber hose runs from the bouquet, inside my coat to my pants pocket, and there is a bulb of rubber that holds about half a pint and when a fellow smells of the poy I squeeze the bulb, and you see the result. It's fun where you don't squirt it on a person that gets mad."

The grocery man said he would give the boy half a pound of figs if he would lend the bouquet to him for half an hour to play it on a customer, and the boy fixed it on the grocery man, and turned the nozzle so it would squirt right back into the grocery man's face. He tried it on the first customer that came in and got it right in his own face and then the bulb in his pants pocket got to leaking and the rest of the water ran down the grocery man's trousers leg, and he gave it up in disgust, and handed it back to the boy.—G. W. Peck.

**A. H. Stephens' Dogs.**  
Like Sir Walter Scott and Henry Clay, Stephens had all his life been fond of dogs. He owned one which he named "Sir Bing Binks," from one of the characters in Sir Walter Scott's "The Two Rovers." Another, who was his constant companion for years, was named "Rio," a poodle dog. Upon his death he was buried in the garden, and over the red-lay mound a marble slab was placed, which, in the following epitaph, written by his brother, Mr. Linton Stephens, records his worth:

Here rest the remains of  
What, in life, was a satire on the  
Human race,  
And an honor to his own,  
A Faithful Dog.

Goldsmith used to write and teach a pet dog to sit on his haunches, and Mr. Stephens, wifeless and childless as he was, lavished on his pet poodle all the warm affections of his nature. The first thing in the morning he romped with his dog. He slept in the same room with his master, and when he was sick the faithful brute never left the room, save for a few moments, for days and weeks together. The dog accompanied his master all over the State. When left behind he watched the arrival of the trains at the depot, going through all the cars in search of him.

In Florida the strong fiber of the leaves of a species of cactus is turned into rope, its juice into a pleasant beverage, and its trunk, after the removal of the pith, into pads.

SCIENTIFIC AND INDUSTRIAL.

William Johnson, a wealthy farmer of Southwold, near Fingal, Ontario, owns a milk-white, mid-eyed steer weighing 3,500 pounds, and standing fully nine feet high. Mr. Johnson is very fond of his "pet," and rather than part with him has refused some liberal offers.

Water saturated with alum is recommended by a French scientist as a speedy and effectual remedy for extinguishing fires. His proposition is based on the theory that the alum would coat the objects wetted with it, intercept the access of atmospheric oxygen and thus stay combustion.

The belief is common that during a considerable fall a person must be asphyxiated by the rapid rush through the air, which constantly accelerates as the distance fallen increases; but the weight of scientific opinion seems to favor the view that, if asphyxia ever results during falls, the distance fallen must be very great.

It takes two hundred and fifty bushels of potatoes to make a ton of potato starch. Its manufacture, which is very simple, is as follows: After being thoroughly washed and freed from dirt the potatoes are reduced to a pulp by means of a grater. The pulp, placed in a sieve, is washed by streams of falling water, the starch being carried through the sieve into a proper receptacle and the fiber washed away as waste. The starch is carried with the water passing through the sieve into a stirring-tank, in which it is washed from the finer particles of waste, and, being heavier than water, sinks to the bottom. It is then further cleansed in other tanks by washing and stirring, until the water is clear and is drawn off. The starch is then removed to a kiln, where it is dried and rendered fit for market.

A correspondent of the London *Engineer* makes a curious suggestion: Men have not yet learned to fly through space like birds; but why should they not take a hint from the *Engineer*, and construct an aerial line worked by electricity? Locomotives are almost useless off the rails, and aeronauts may be well content if they learn to fly along wires. The projector would substitute for the unwieldy balloon a light, stout plane, shaped like a kite, balanced by a car, and propelled by a screw, driven at a good speed by a dozen or more Trouve machines arranged in couples along the propeller shaft. By a line of stout telegraph wire led on poles from Berlin to Paris, or from Pekin to St. Petersburg he would transmit a 100-horse power along the wire by powerful dynamos at stations, say a hundred miles apart, which would be taken to the flying plane by two light wires, having contact carriages at the lower ends. The wire would have to be strong to stand the strain of a heavy wind on the buoyant kite, but it is much more probable that men will learn to fly along wires before they are able to fly alone promiscuously through the air.

A big-handed sawyer named Shaw, put his finger too near the buzz-saw. He saw his mistake, but each pain and ache. St. Jacobs Oil cured in his paw.

A rheumatic old man named Meeker, was sick a whole year in Topeka. He there would have died, but St. Jacobs Oil tried, it sent him back cured to Osweeger.

One Poisonous Lizard.  
The Philadelphia College of Physicians stated that in response to inquiries from Arizona, one of which described the lizard as young peaceable and harmless than a young missionary, while the other declared it to be "worse than a whole apothecary shop." Recent experiments made with captive specimens of the Gila monster, however, seem to demonstrate satisfactorily its poisonous nature. Small animals and birds were killed by its bite. It has numerous small teeth, and when it bites a quantity of saliva is discharged. This saliva or fluid is found to be an active poison of very peculiar nature. It causes no local injury, but seems to act directly upon the heart, arresting its action in diastole. Its effect is entirely different from that of the venom of serpents, which causes local hemorrhage.

**Snakes as Life Destroyers.**  
The loss of life in India due to the ravages of venomous snakes is almost incredible. Yet Consumption, which is as wily and fatal as the deadliest Indian reptile, is winding its coils around thousands of people while the victims are unconscious of its presence. Dr. R. V. Pierce's "Golden Medical Discovery" must be used to cleanse the blood of the scrofulous impurities, for tubercular consumption is only a form of scrofulous disease. "Golden Medical Discovery" is a sovereign remedy for all forms of scrofulous disease, or king's-evil, such as tumors, white swellings, fever sores, scrofulous sore eyes, as well as for other blood and skin diseases. By druggists.

The stock-raisers of California estimate the aggregate value of their flocks and herds at \$35,000,000. The number of horned cattle is estimated at 2,250,000.

**Taken Out of Bed.**  
Dr. R. V. Pierce, Buffalo, N. Y.: Dear Sir—I have to thank you for the great relief received from your "Favorite Prescription." My sickness had lasted seven years, one of which I was in bed. After taking one bottle I was able to be about the house. Respectfully,  
AMANDA K. ENNIS, Fulton, Mich.

The monument at Yorktown, Va., is to be built of Maine granite by a Maine company, and to cost \$66,327.

**Fits, Fits, Fits.**  
Successfully treated by World's Dispensary Medical Association. Address, with stamp for pamphlet, Buffalo, N. Y.

**Latex is one of the leading centers of the doll-making trade.**

**On Thirty Days' Trial.**  
The VOLTAIC BELL CO., Marshall, Mich., will send Dr. Dye's Celebrated Electro-Voltaic Belt and Electric Appliances on trial for thirty days to men (young or old) who are afflicted with nervous debility, lost vitality and kindred troubles, guaranteeing speedy and complete restoration of health and manly vigor. Address as above. N. B.—No risk is incurred, as thirty days' trial is allowed.

**That Husband of Mine**  
Is three times the man he was before using Wells' Health Renewer. \$1. Druggists.

"Rough on Corns."

Ask for Wells' "Rough on Corns," the Quick relief; complete cure. Corns, warts, bunions. The Fraser Axle Grease is the best in the market. It is the most economical and cheapest, one box lasting as long as two of any other. One greasing will last two weeks. It received first premium at the Centennial and Paris Expositions, also medals at various State fairs. Buy no other.

**Catarth of the Bladder.**  
Stinging irritation, inflammation, Kidney, Urinary complaints, cured by Buchu-palpa. \$1. The habit of running over heels or shoes corroded with Lyon's Patent Heel Stiffeners.

**Voluntary Tributes of Gratitude for Benefits Received.**  
DEAR SIR—Please allow me the privilege of giving my testimony regarding the wonderful curative properties of your invaluable medicine, Hunt's Remedy. During the past six or seven years I have been a great sufferer from kidney disease, and during a great part of the time suffering from complete loss of appetite, loss of strength, and all diseases arising from an impure state of the blood and the bowels, through the blood.

"I had no appetite, no strength, and was feeling as mean as any animal, and about my work. As soon as I began taking Hunt's Remedy my food relaxed, and I felt myself growing stronger every day. I thoroughly believe in the value of Hunt's Remedy. I own my recovery to Hunt's Remedy. It deserves the confidence of the public, especially those who are troubled with humors."—J. PETER, Chelsea, Va. A gentleman tells me: "Before commencing taking Hunt's Remedy I had fallen in weight from 125 to 140 pounds. My appetite has returned, my strength restored, and I am rapidly regaining my flesh."

"Internal humor caused a burning in my stomach; my food distasteful; I could not sleep nights. Hunt's Remedy has relieved me of these troubles, and I sleep well now."—Mrs. S. A. EDMUND, Warner, N. H. "I have never found anything that hit my nerves as Hunt's Remedy. It tones up my system, purifies my blood, sharpens my appetite, and sends me on my way."—J. P. THOMPSON, Register of Deeds, Lowell, Middlesex County, Mass.

Hood's Sarsaparilla will positively cure—wren in the power of medicine—dyspepsia, indigestion, headache, constipation, biliousness, loss of appetite, neuralgia, pains in the back, kidney complaint, female weakness, catarrh, scrofula, scrofulous and cancerous humors, ulcers, sores, tumors, salt rheum, and all diseases arising from an impure state or low condition of the blood.

"The beneficial effects from Hood's Sarsaparilla have been more speedily than from any other preparation of the kind."—E. G. WOODMAN, Wilton, N. H. "I have taken four bottles of Hood's Sarsaparilla this spring, and it has done me good."

MARCH APRIL MAY

Are the best months to purify the blood, and Hood's Sarsaparilla is the best medicine to do it. It will cure indigestion, spring debility, biliousness, headache, loss of appetite, and all diseases arising from an impure state of the blood. It works upon the kidneys, the liver and the bowels, through the blood. "I had no appetite, no strength, and was feeling as mean as any animal, and about my work. As soon as I began taking Hood's Sarsaparilla my food relaxed, and I felt myself growing stronger every day. I thoroughly believe in the value of Hood's Sarsaparilla. I own my recovery to Hood's Sarsaparilla. It deserves the confidence of the public, especially those who are troubled with humors."—J. PETER, Chelsea, Va. A gentleman tells me: "Before commencing taking Hood's Sarsaparilla I had fallen in weight from 125 to 140 pounds. My appetite has returned, my strength restored, and I am rapidly regaining my flesh."

At no other season is the system so susceptible to the beneficial effects of medicine. This is the time to take Hood's Sarsaparilla to purify your blood and fortify your system against the debilitating effects of spring weather. Try this Spring Medicine now. It sharpens the appetite, tones the stomach, invigorates the agent, and imparts new life and energy to all who take it. "If you want a medicine to get all through 'em and wake 'em up, tell them to take Hood's Sarsaparilla."—THOMAS M. BRYAN, Meredith Village, N. H. "When I finished the seven bottles of Hood's Sarsaparilla I felt like a new person. I can do two days' work in one now."—Mrs. A. D. ALLEN, Lowell, Mass. "Three years ago scrofula broke out on my face, head and ears as they were one solid sore, my hair fell off, my sight and hearing were impaired. I commenced taking Hood's Sarsaparilla, and in one year's time was entirely cured."—Mrs. MARY H. PARKMAN, Deane, Me. "Before I used Hood's Sarsaparilla I suffered constantly from sick headache. Now I am rarely troubled, and my food does not distress me as it did. It has done me good."—H. J. MORRILL, Lowell, Mass. "I suffered from biliousness 15 years. Hood's Sarsaparilla cured me."—J. J. CONNOR, Deane, Me. "Subject to severe attacks of scrofula, I had used Hood's Sarsaparilla and was much benefited by it."—Mrs. J. W. CLEMENT, Franklin, N. H.

Hood's Sarsaparilla

Hood's Sarsaparilla is a compound concentrated extract, skillfully prepared, by a process peculiar to itself, of the active medicinal properties of the most approved alterative, tonic and blood-purifying remedies of the vegetable kingdom, known to medical science as Alterative, Blood Purifier, Diuretic, Tonic and Stomachic. These articles have been used for years, and their medicinal value is appreciated by every nation in the land. "I have suffered with milk leg for eleven years. I have been taking Hood's Sarsaparilla for about one year, and have experienced a steady gain since I commenced using it. I have taken six bottles; it has done wonder for me."—Mrs. G. BENTLEY, Deane, Me. "I cordially attest my faith, backed by actual trial, in the efficacy of Hood's Sarsaparilla as a curative for headache, biliousness, and that condition which at times prevails as well, commonly called 'the blues.'"—J. J. LOVELL, Greenfield, Me. A searching investigation resulted in the combination of Hood's Sarsaparilla, which is peculiar to itself, is vastly superior to other preparations, and is much more positive in its effects upon the blood and organs of the body. True and constant use have produced its efficacy beyond a question. The wonderful results from its use prove more than was ever claimed for it.

Purifies the Blood

To purify, vitalize and enrich the blood, to cure spring debility, biliousness, dyspepsia and sick headache, Hood's Sarsaparilla is pre-eminently superior to all other articles.

A good name at home is a tower of strength abroad. A recent census proves, despite all claims to the contrary, that ten bottles of Hood's Sarsaparilla are sold, by the druggists of Lowell, to one of the other sarsaparillas combined. This startling proportion proceeds from its numerous, unprecedented, well-known and remarkable cures in Lowell and vicinity.
