Paint Mishaps and Hairbreadth Escapes from Death-An Explosive Which Rurely Tolerates Feeling.

A few days ago a reporter, traveling on the Pennsylvania railroad, met a man whose appearance would not denote that he had passed through more narrow escapes than ordinary men are usually subject to. He was the proprietor of a nitro-glycerine factory. He laughingly said that he was different from most tradesmen, for he carried no samples with him.

"Yes, sir," he said, as the reporter gradually drew him into conversation, "I have seen some pretty hard sights in my time. I think the worst, though, was when I saw the remains of four men sticking all over the branches of a tree. The way it happened was this: In one of our tanks we had stored a small quantity of glycerine that belonged to a friend. were keeping it for him. We allowed it to remain there for some time, as there was no can for it. But one day, on coming to the tank, we found some one had been tampering with the lock, and that it was impossible to get it open. This was a fine fix! Well, the next day was Sunday, so as there was no business on hand, the owner of the stur announced his determination to get that tank open, and three men were induced to join him in the at-tempt. We tried to persuade him to let it alone, but off he started. Well, sir, it wasn't long before we heard the awfulest explosion you ever heard. It was frightful, We hurried up to the place, and all we could find of those men was to be seen on the trees, little pieces of their bodies, parts of their fingers, and so on. We never knew what caused the explosion, whether they had tried to burst open the tank recent number of Harper's Magazine. and thus caused the glycerine inside to go off or how it was."

careful, and in consequence he was fire. made considerable fun of by the rest. cans, made a fuse shorter than we ever luminous, used, and touched it off. He started to run, but he had not gone far, when fell, or he would have been blown to pieces. As it was he was completely riddled with tin. It was as though he had on a coat of mail-he was so coated. He did not get over that for many a month, and he always said again, no matter how long it took to touch off a can."

"How high salaries do you paypretty good?" "I can get all the men I want for \$75 a month," he answered, "and always have more applications than

"Why do you stay in such business?"

"It's a good paying business and needs but little help. I earned \$10,-000 the first few months, and expect to clear much more in the next few. I attend to the books and the business now myself, but I know every branch, and can take hold at any time if our help runs short, and go to work myself. I am now going on to see about a contract we have for opening a tunnel in the east."

"How do you get the stuff to them
—by railroad?"

"Oh, no; we don't send them the fluid. We furnish only the solid—the dynamite. That is harmless enough. If you should put a little on the floor there and touch it off it would merely flash like powder. You see it won't do to use the liquid around a railroad where there are so many workmen, many of them ignorant of what is being done. It will do at the oil wells, for there the men have got used to it and know enough to get out of the way when we are going to blow in.'
In taking the glycerine around we have to use wagons made especially for it. They are made with compartments under the seat lined with cotton, and in these the cans are placed. I remember the first time I rode on one of these wagons. The fellow who drove rattled along as though we had only a load of cabbages. He laughed when I tried to get him to drive more carefully. Poor fellow! his time came. He was driving along one day with a friend. In going by a bad place in the road the wagon tipped. His friend sprung out just in time, for

over the wagon went. "Well, were they hurt?" "They never found anything of the cotton. driver, horse or wagon, 'he answered, "but a few scraps. His friend, however, wasn't hurt a bit."

"Did you ever have to carry any of

the stuff yourself?"
"Well, I should say so," he replied. "And I carried it in a leaking can. I chanced to look in the place where the stuff was and found it was leaking for all it was worth. About half had been spilled. I looked beneath the wagon and saw that the spring was completely covered. I can tell you I drove mighty

carefully the rest of the way." The reporter remarked that it was a

dangerous experiment.

ered," the man modestly replied. "1 London Lance!. remember once we had to deliver a allppery and I had to walk pretty care- and they will escape dyspepsia.

A DANGEROUS OCCUPATION, fully. Notwithstanding sals, however, I stepped on a piece of ice and felt myself falling. Well, I don't believe I ever thought quicker in my life, I knew what the ressult would be if those cans struck; so I just put all my strength in my arms, and, straightening them out, held the cans

my head. over struck the ground, but the cans were safe. Well, sir, I wasn't a bit scared. Some way or other I retained perfect self-possession. But as soon as the danger was over I fainted dead away. The horror of the whole thing and my

narrow escape flashed over me then. "The temperature makes a difference with the explosiveness of the

glycerine, doesn't it?" "Oh, yes; if it can be kept cool there is little danger. But we try to keep it above fifty, or it will freeze. That would not do, for some would be likely to remain in the cans after emptying them."

"Why, wouldn't it be a scheme to have the cans packed in ice? Have regular refrigerators for them, so to speak."

He smiled a pitying sort of a smile, and said: "It would be too much trouble. When persons are careful there is little danger."

"But they are not careful. The more they work around it the more careless brim lined with roses. they become-so you say.'

"Well, that's a fact. I have seen some very foolhardy things done. I saw a fellow shoot at some empty cans to explode them when a number of other cans was standing near. Eight persons beside himself were killed by the explosion."

## Luminous Plants.

It is well known that many insects and forms of marine life have a luminous quality strong enough to justify the name of "living lamps," which was given to them by a writer in a

Sometimes the phosphorescence in the sea blinds the eyes to the brightest "Probably you get very careless in working around the stuff? was remarked."

"Brobably you get very careless in stars, and this is produced by minute forms of organic life. Similar atoms of the infusoria will cling to the hu-"Yes, indeed," he returned, "we man body which has been bathed in get so that we think very little about certain parts of the tropical seas, so it—not any more than if it was so that, seen in the dark, the bather will much milk. In fact, it does look some- have the appearance of a glowworm, thing like milk. A great sport with and when they are carried up into the the boys is to touch ou the empty cans air in a waterspout at night the pillar with a fuse. One of our men was very which the mariner sees will be one of

Among insects the firefly is the most He always used a very long fuse. But familiar, its sudden appearance, as one day, in consequence of the ridicule, night comes on, changing the gloom to he said that he would try a short a scene of splender, and in Southern enough fuse. So he took some empty countries the beetles are remarkably

Many plants, also, possess a lightgiving quality. It is told of a party he stumbled and fell, and as he did so of mining prospectors in New Mexico the cans went off. Well it was a that when, after dark, they looked for mighty lucky thing for him that he shelter in a mountain cavern, they were alarmed by strange lights which gleamed and blazed overheard. When touched with a stick the burning spots fell at once to the ground, and when they were picked up they were found to belong to a curious phosphorescent that he would never be such a fool fungi, common in many coal mines, especially in Sweden, where in some mines they glow so splendidly that they seem like festoons of light hung from ceiling to wall. The rays of light are like moonbeams delicately colored, and it is possible to read by them within some countries.

Not only are many plants luminous in themselves, but their juices also possess the phosphorescent quality. Naturalists have described the strange scene of animals pursued by the natives at night, dashing through the vegetation as much in terror at their own appearance as of the hunters. Tapirs have been seen bounding through the tropical forests as if bathed in fire, simply be ause they have become entangled in the meshes

of the cipo of Brazil and Asia. Nothing is more impressive on a midsummer night than to listen in the country to the insect voices that unite in chorus on the mountains and in the forest. We can understand the hum which rises from a city, for there the forms of life are familiar to us; but the invisible life of the woods, often infinitesimal in form, has a mysterious activity, which is only faintly echoed in these sounds. Nor does the activity go on in darkness, for many of the tiny workers carry their own lamps with them .- Youth's Companion.

## HEALTH HINTS.

Laws of Health.

Coarse bread is much better for children than fine.

Children should sleep in separate beds, and should not wear night-caps. The more clothing we wear, other things being equal, the less food we

## CASHION NOTES.

Gay hosiery is no longer in favor. An entire new bonnet is sometimes of basket gilt straw.

Printed mull muslin dresses are novelties lately brought out.

Latest shades of color are "faded silver" and "decayed gooseberry." Plaited blouse waists and long apron overskirts bid fair to remain in high

White glace or Surah silk is the correct lining for printed mull or muslin

The new Spanish lace grenading promises to be popular drape over saken or surah.

The favorite color for the dots and scalloped edges of Swiss embroidery bands is red. Gigot sleeves and bustles are in

rogue in Paris, but are not as yet popular in America Skeleton bonnets, showing all or nearly all the coiffure, are novelties,

but not much worn. Dainty little breakfast caps, all lace and bits and ends of ribbon, are com-

ing in fashion for brides. A new bonnet is composed of gold and leather in alternate rows, with the

London girls of the highest social position are making it fashionable to take lessons in dressmaking.

The dressy cloth wraps are mantilla

shape, with square sleeves, and are trimmed with passementerie in bright Capotes are often made of the dress material; ottoman ribbon is formed in

a bow on the side and is used as strings. The Chinese capote is the latest fancy in bonnets. It has a conical cap crown

and cutaway brim, pointed and close at the top. Handsome toilets male of heavy materials have the drapery held in

place by birds, large buckles and some-

time flowers. Gainsborough straw hats, lined with white velvet and trimmed with white plumes, are the acme of elegance and style for riding.

Cloud and Quaker grays are the new shades of gray for ribbons, dress ma-terials and glovas intended for the coming season.

Waistcoats are again in favor; they are made just like a man's, and over them is worn a little cutaway jacket with loose fronts. The Mother Hubbard slip, without

sleeves, and low in the neck, worn over an under waist, or guimpe, remains the popular dress for little girls. Some of the collars with plastron waistcoat attachments are made of lace

and velvet ribbon, the ribbon outlining the Moliere front of lace. Black relieved with the merest daub or touch of white in the way of lace or flowers remains the favorite costume of high ceremony with New York

women. Some of the newest brocaded gauzes have designs so rich and heavy as to closely resemble hand embroidery; these solid black goods have single sprays of flowers, such as hyacinths, tulips, roses and daises, scattered at tulips, roses and daises, scattered at wide intervals over plain ground. A very beautiful dress is produced by taking one of these gauzes and embroidering the brocade figure with cut jet beads. Enough of the material is headed in this manner to form correspond out effort. This fungi, and others of very beautiful dress is produced by a similar kind, illuminate the branches of trees, the leaves of shrubs and even broidering the brocade figure with cut the huts and cottages of the peasants | jet beads. Enough of the material is beaded in this manner to form corsage and skirt draperies. The costume thus arranged has a very elegant effect,

## The Last Olympic Festival.

A correspondent, in describing the excavations at Olympia, writes: The last Olympic festival was held A. D. 393, in the same year, or the next, the great gold and ivory statue of Zeus, the pride of Olympia and of Greece, was carried off to be set up in Constantinople, where it was subsequently destroyed by a great fire, which consumed a large part of the city. In 395 Alaric and his Goths ravaged the sumed a large part of the city. In 395 Alaric and his Goths ravaged the Peloponnesus; but it is impossible to tell how much harm they may have done to the massive stone structures of Olympia. In 425 Theodosius 11., in his eagerness to destroy all relies of heathenism, ordered the temple of Zeus to be hurned, but, as the whole temple, with the exception of the roof, was built of huge blocks of stone, it must have remained standing after this attempt at its destruction. The ruins, as they were found during the ruins, as they were found during the excavations, show that the overthrow of the great temple of Zeus, as well as most of the other structures at Olympia, was due to earthquakes, which are not by any means of rare occurrence in

It is estimated that there are 18,-000,000,000 feet of white pine now standing in the lower peninsula of Michigan, while in the upper peninsula there are probably not less than 5,000,000,000 feet.

"Dr. R. V. Pirace, Buffalo, N. Y.: "Five years ago I was a dreadful sufferer from uterine troubles. Having exhausted the skill of three physicians, I was completely discouraged, and so weak I could with difficulty cross the room alone. I began taking your 'Favorite Prescription' and using the local treatment recommended in your 'Common Sense Medical Adviser.' In three months I was perfectly cured. I wrote a letter to my family paper, briefly mentioning how my health had been restored, and offering to send the full particulars to any one writing me for them and inclosing a stamped cateloge for reply. I have received over four hundred letters. In reply, I have described my case and the treatment used, and carnestly advised the treatment used, and carnestly advised them to 'do likewise.' From a great many I have received second letters of thanks, stating that they had commenced the treatment and were much better already."—Mas. E. F. MORGAN, New Castle, Me.

A WONDERFUL DISCOVERY.

An Article that Will Make the Bald and Gray Rejeles.

Many of the hair dressings of the day are excellent, but the great mass of the stuffs sold for promoting the growth and bringing back the original color, are more humbugs, while not a few are pernicions in their effects upon the scalp and hair. The falling out of the hair, the accumulations of dandruff, and the promature change in color are all evidences of a diseased condition of the scalp and the glands which nourish the hair. To arrest these causes the article used must possess medical as well as chemical virtues, and the change must begin under the scalp to be of permanent and lasting benefit. Petroleum oil is the article which is made to work such extraordinary results; but it is after the best refined article has been chemically treated, and completely decdering the state of the which is made to work such extraordinary results; but it is after the best refined article has been chemically treated, and completely deodorized, that it is in proper condition for the toilet and receives the name of Carboline. It was in far-off Russia that the effects of petroleum upon the hair were first observed; a government officer having noticed that a partially bald-headed servant of his, when trimming the lamps, had a habit of wiping his oil-besmeared hands in his scanty locks, and the result was, in a few months, a much finer head of black, glossy hair than he ever had before. The oil was tried on horses and cattle that had lost their hair from cattle riague, and the results were marvelous. The manes and tails of horses, which had fails out, were completely restored in a few weeks. These experiments were hersided to the world, but no one in civilized society could tolerate the use of refined petroleum as a dressing for the hair. But the skill of one of our chemista has overcome the difficulty, and he has succeeded in perfecting Carboline, rendering it as dainty as the famous can de cologne. Experiments on the human hair and skin were attended with the most astonishing results. A few applications, where the hair was thin and falling, gave remarkable tone and vigor to the scalp and the hair. Every particle of dandruff disappears on the first or second dressing, all cutaneous disease of the skin and scalp are rapidly and permanently healed, and the liquid seems to penetrate to the root of the hair at once. It and permanently healed, and the liquid seems to penetrate to the root of the hair at once. It is well known that the most beautiful colors is well known that the most beautiful colors are made from petroleum, and by some mysterious operation of nature the use of this article gradually imparts a beautiful light brown color to the hair, which by continued use deepens to black. The color remains permanent, and the change is so gradual that the most intimate friends can scarcely detect its progress. In a word, it is the most wonderful discovery of the age, and well calculated to make the prematurely bald and gray rejoice. Carboline is put up in a neat and attractive manner and sold by all dealers in drugs and medicines. Price one dollar a bottle. Kennedy & Co., Pittsburg, Pa., general agents for the United States and Canadas.

We advise our readers to give it a trial,

We advise our readers to give it a trial, feeling satisfied that one application will convince them of its wonderful affects.

A NOTED BUT UNTITLED WOMAN.

The above is a good likeness of Mrs. Lydia E. Pinisham, of Lynn, Mass., who above all other human beings may be truthfully called the "Dear Friend of Wessen," assence of her correspondents love to call her. She is scaleurly devoted to her work, which is the outcome is scalously devoted to her work, which is the outcome of a life-study, and is obliged to keep six lady assistants, to help her answer the large correspondence which daily pours in upon her, each bearing its special burden of enfecting, or joy at release from it. Her vegetable Compound is a medicine for good and not evil purposes. I have personally investigated it and an actisated of the truth of this.

On account of its proven merits, it is recommended and prescribed by the best physicians in the century. One says: "It works like a charm and saves much pain. It will care entirely the worst form of falling of the uterus, Leuserrhum, tregular and painful

of the sterus, Lescerture, irregular and painful Menstrustion, all Ovarian Troubles, Instammation and Ulceration, Floodings, all Displacements and the consequent spinal weakness, and is especially adapted to the Change of Life." the change of Life."

It permeates every pertion of the system, and gives
new life and vigor. It removes faintness, flatulency,
destroys all craving for stimulants, and relieves weak-

ness of the stomach. It causes Bleating, Headaches, Nervous Prostration, Ocneral Debility, Sleeplessness, Depression and Indigestion. That fooling of bearing down.causing pain, weight and backache, is always permanently cured by its use. It will at all times, and under all circumstances, set 'a harmony with the law that governs the female system. It come only \$1, per bottle or six for \$5, and is sold by

It costs only \$1, per bottle or sir for \$3, and is sold by druggists. Any advice required as to special cases, and the names of many who have been restored to perfect health by the use of the Vegetable Compound, can be obtained by saidressing Mrs. R., with stamp for repir, at her home in Lynn, Mass.

For Kidney Complaint of either sex this compound is unsurpassed as absudant testimonia's show.

"Mrs. Plukham's Liver Pills," says one writer, "are the beef of the world for the sure of Constipation, Billousness and Torpidity of the liver. Her Blood Purifier works wonders in its special line and bids fats to equal the Compound in its populasity.

All must respect her as an Angel of Mercy whose sole ambition is to degreed to others.

Seedlemen. I have just commenced on my second both the Kidney-Wort. I have just commenced on my second both the Kidney-Wort. I have just in the faith in either doctors or incidence, more particularly in medicines astronously advertised. However, I have soffered perhaps at no other man his sufficed from liver disease—brought on by malaria. I suffered for years, till it became chrunk; simply from neglect. I have taken quinine till my head swam, and my nerves were totally unstrang. Last year I went to Europe to try and better it; but came hade werse. In reading many of your advertisements I came to the conclus on, as a dernier resort, to try the Kidney-Wort, and did so. After the fourth day I got an attack of the old malader. I prayed God to relieve me by death, but kept to the indictine as ordered, and I want to tell you to-day, and all safferens from liver disease, that the last three weeks I have emjoyed such good health as I have not had in many, many years. I amply waste you this that other sufferens may benefit by it. Very truly yours.
