WONDERFUL TRICKS PERFORMED BY THE HINDOO WIZARDS.

Skilful Sleight-of-Hand Exhibitions Which Puzzle the Most Careful Watchers-The Basket Trick.

Let me give you a picture of an Indian uggler, writes Frank G. Carpenter from Bombay, India. One stands outside my hotel window as I write. He is performing his tricks in the dusty road without a table, cabinet, patent boxes, or any of the accompaniments of the American wizard. His sole possessions consist of three small baskets, ranging in size from half a peck to a bushel, a couple of cloths and a tripod made of three sticks, each two feet long and held together by a string at the top. Three little wooden dolls with red cloths tied around their needs and each not over a foot long, are the gods which enable him to do wonder ful things. He has a flute in his mouth and a little drum in his hand. He is black-faced and black-bearded, and his shirt sleeves are pulled up above his elbows. His only assistant is a little turbaned boy, who sits beside him, whom he will shortly put into a basket not more than two feet square, and with him will perform the noted basket trick of India.

This trick is one of the wonderful juggling tricks of the world. The boy's hands are tied and he is put into a net, which is tied over his head and which incloses his whole body so that he apparently cannot move. He is now crowded into this basket. The lid is put down and tight straps are buckled over it. The juggler now takes a sword, and with a passes of these little Hindoo doll babies over it and the muttering of incantations as a preliminary, thrusts the sword again and again into the basket. There is a crying as though some one was in terrible pain. It is the voice of a child, and the sword comes out bloody. You hold your breath, and did you not know it to be a trick you would feel like pouncing upon the man. After a mo-ment the basket becomes still, the juggler makes a few more passes, unbuckles the straps and shows you that there is nothing within it. He calls: "Baba! baba!" and in the distance you hear the child's voice. How the boy got out of the basket or escaped being killed by the sword and where the blood came from I do not know. I only know it was a sleight-of-hand performance and wonderfully well done.

. The mango trick is performed with the three sticks in the shape of a tripod. The juggler takes a pot of water and pours it over a little pot of earth. He then holds up a mango bulb about the size of a walnut, and, putting this into the earth, he throws a cloth over the triped. He now blows upon his horn, makes mysterious passes, and after a few moments raises the cloth and you see the mango tree sprouting forth from the soil. More passes and more music follow, and the cloth is pulled down again. After a few moments, during which the showing of minor tricks goes on, he pulls out the pot, and the plant has grown about a foot above it. There is more watering and more incantation, and his final triumph comes in showing you a bush nearly a yard high, containing great leaves. This he will pull up by the root and show you the seed at the bottom. It is a wonderful trick, and how the man is able to manipulate the different plants with nothing else but a thin cotton cloth to help him, which, by the way, he allows you to examine, is hard to conceive. He has a dozen other sleight-of-hand performances equally as wonderful. He puts a little shell into his mouth and appears to choke as he draws out coin after coin and balls of stone almost as big around as your fist. He spits fire, as does the American wizard, pulls miles of string from his stom-ach, sticks pins through his tongue without hurting himself, and ends the performance with a snake trick, which is to me the most wonderful of all.

In doing this snake trick he asks for a piece of paper and asks you to hold out You do so and he places the paper upon it. He then begins to play upon his pipe and to dart out his eyes as though he saw something near your hand. His whole frame becomes transformed he dances around you like a wizard, playing all the time and keeping his eyes on your hand. Now he starts back and points at it. You look and see nothing and he begins to plays louder and dance wilder than ever. Remember his arms are bare to the elbow and both of his hands are upon his pipe. Suddenly he drops the pipe and continues his is by with incantations. He poly at mice paper again and while to the nothing he claps is tell you look and see and no Grenson bills hand down upon it scor runs up three great cobras, which raise their hooded heads and dart out their fangs in different directions, and squirm and wriggle as he holds them up before you. You jump back, for the bite of the cobra is deadly, and I am told that the snakes used have in some cases not had their fangs drawn.

A juggler was killed a week ago in Benares by the bite of a cobra which he was using in this way, and they are the most terrible anakes I have ever seen. another performance of this same kind I was present with a party of four, and we all decided to ascertain, if we could, how this trick was done. I stood upon a chair and overlooked the man as he snatched up the snakes, but I could not see where they came from, and I only know that he had them, and that they were so big that he crowded them with difficulty into a little round basket the size of a peck

## Plutes Expecting a Flood.

Virginia, Nev., is full of Piutes men omen and children, who, fearing a deluge, are getting out of the valleys. Not long ago a Piute prophet predicted a great flood that would drown all this part of the world. He said the ancients would rise from their graves and there would be a new deal on this continent, in which the red men would be restored to their old rights and repossess the land. Having been told of the flood in the East and the drowning of thousands of white men, they have got an exaggerated idea of the disaster and believe that very few whites remain on that side of the continent. Their prophet, of course, claims credit for what has happened, and they next expect a flood to drown the whites of the West. They are laying in a stock of provisions with which to flee to the mountain tops, and suppose that the whites will remain in their houses to be drowned as they did in the East .- Virginia (Nev.)

Some idea of the amount of tin-plate consumed in this country may be obtained by the fact that we naturally spend \$20,-000,000 to \$25,099,000 abroad purchas-

#### THE FARM AND GARDEN.

STRALING MESTS. If a hen steals a nest somewhere, let her remain where she is, and not remove provided she is comfortable. See | tention to it, and caution renders against that her nest is sheltered, however, in case of rains, which may destroy all her expectations. If there is danger from twarmints" at night, it is better to remove her to the poultry-house, if she will his orchard when in full bloom, while remain on a nest; but if not, it is well to Mr. Pearce's bees were working in break her from incubation. It is a waste of time for her to sit if her chicks are to be destroyed by rains or animals .- Farm and Fireside.

REARING A COLT BY HAND. A motherless colt may as easily be reared by hand as a calf, and will learn to drink from a pail readily. At first a milk pan may be used for feeding it. A method of feeding that has been found destrable is as follows: Give a two or three days' old colt one pint of new milk, fresh from the cow, with a tablespoonful of molasses mixed with it, four times a day, and once daily give a pint of strained outmeal gruel with an egg mixed in it, smoothly. A mare's milk is much sweeter than cow's milk, and the molasses or some sugar is needed. As the colt grows the quantity of food is to be gradually in-creased. When two or three weeks old the colt will eat grass and should be put

in a pasture .- New York Times. ICE-WATER A GOOD INSECTICIDE. Few people realize how good an insec ticide is ice-cold water applied to plants with a force pump. It drenches the leaves, knocking off and chilling the insects too small to be reached in any other way. It also destroys myriads of insect eggs. It is noticed by potato growers that the potato bug is rarely destructive in a wet season. Now, as the potato plant loves water, it might, on a small scale, he protected from injury and the scale, be protected from injury, and the crop be greatly increased by thorough drenching once or twice a week. This remedy is a good one for the rose slug. Few wish to apply poison to preserve this beautiful flower, while the whale oil applications often recommended are almost equally objectionable .- Boston Cultivator.

WHAT ABOUT THE SILO? That there should be some advance made in silo knowledge, says John Gould in the American Agriculturist, is not sur-prising, when some fifteen thousand wideawake farmers in this country are each constituting himself as the director of an experiment station, to find out for himself how much new can be chanced upon and yet score success. The wooden silo has proved its claims as a superior receptacle for the preservation of silage, as it is not only less costly, but a better non-conductor of heat, and therefore more easily made frost proof; all of which means a more uniform temperature for the silage, and the nearer approach to the ideal sweet silage. There is some ques-tion about the walls of the wooden silo, whether to have them two boards thick, with tarred paper between, or of one painted with hot asphaltum. The one can constructed with cheap, cull pine lumber, the other must have good, wellmatched flooring, or an air tight wall can-not be secured. Some hold that it is yet better to lath and plaster the interior of

then put into the silo without the usual

be again filled to the top, and attention then can be paid to No. 2.

It was demonstrated last year that any

amount of rain upon silage fodder before

going into the pits will not injure it or

cause any increase of acidity. Last fall thousands of loads of fodder dripping with rain, went into the pits but the silage

showed no evil effects from it, nor did a

frost near the close of silo filling work

was also found that tramping is not to be

encouraged until after twenty-four hours,

when the silage has begun to wilt. Then

it is only of benefit along the walls to assist in making it settle. Many cases of silage spoiling along the walls result

from tramping when fresh cut, as it ex-

pels the air to an extent which prevents

it from taking on heat and wilting alone

the walls as fast as in the centre. Instead

of keeping the silo about level when

filling, it is better to keep it the highest

necessity of keeping a man in the pits

A cover to the silo, or weights, are

wholly unnecessary. The silos in this region that had no covers of any sort did

not show more surface waste of silage

than those covered with paper, boards

and sawdust. Only two or three inches

of silage molded where no surface pro-

inches of white mold made an air-tight

cover that offered all the protection

needed. The siles covered with a foot

of dry straw, well tread down, showed

the least loss of any. Those who covered

Great Britain counts on soon having the largest dynamo in the world. It is being made for the new electric light works at Deptford. The shaft of the machine will be turned out of a block of steel weighing seventy-five tons, which has just been cast in Glasgow,

The highest pressure used to drive a water-wheel is claimed by a valley near Frenoble, France, where a turbine ten feet in diameter has been operated since 1875 with a head of 1588 feet. A flow of about seventy-five gallons of water per second gives a force of 1500 horsepower.

Adolph Struthers of Hancock County, Ohio, is bound to keep cool this summer. He has invented a fan to be placed in his hat, which is run by an electric battery carried in one of his pockets. He has been using the fan for several weeks past and says it works perfectly, and that he does not mind the extra weight.

One of the greatest advantages which Chinese teas are said to possess over those of India is their great wholesomeness. On this subject the British Consul at Hankow, in his last report, gives a table of analysis of the two kinds of tea made by Professor Dittmar, F. R. S., from which it appears that the quantity of tannin in India tea is 9.68 per cent, and in Chinese

So long ago as 1856 James Nasmyth told the British Association for the Advancement of Science that the thunderbolt's course was not zigzagged, as artists for centuries had represented, but sinuous like a river; and he also declared that lightning sometimes had forks or oranches. This was the result of singularly keen observation. Photographs, however, corroborate his views in a marvellous way.

## A Sub-Marine Bridge.

A "sub-marine bridge" is proposed be-Swedish engineer, Mr. Rudolph Lillejegrist. The distance is two and onehalf miles, and the proposed structure would join Elsinore to Helsingberg by a bridge made up of 100 foot spans, carrying a single line of rails. It is to be submerged sufficiently to allow ship to pass over it. The bearings would be enskin of iron and an inner one of steel, and the space between the shells filled with concrete. It is foreseen that the outer shell might rust away in time, but it is believed that the concrete would remain intact and protect the steel. The piers would be ordinary caissons, filled with concrete placed 100 feet apart. The tubes would rest on these piers, and the girders would take a bearing on blocks inside the tube immediately over the piers. The tube would be floated out in onehundred feet lengths and lowered to place, and a massive collar of concrete put over the joints. Pontoons, with legs at each corner, worked by hydraulic rams, so as to give a stable platform, would be used in sinking the tubes. The estimated cost of the submerged work is about \$3,500,000, not including the tunnel approaches.

# Financial Status of Our States.

The States out of debt are Illinois, Wisconsin, Delaware, West Virginia and Colorado. West Virginia is prohibited by her constitution from going into debt. California and Iowa have no debt to settle, though paying interest on a school fund. Kentucky is nearly free from debt. New York owes \$7,000,000; Ohio and Minnesota less than \$4,000,000; New Jersey and Kansas less than \$2,000, Virginia is the most heavily bur den, having a funded debt of over \$23, 000,000 and an unfunded debt of over \$8,000,000. Massachusetts carries the next heaviest debt, over \$31,000,000, Next comes Tennessee, \$17,000,000; Pennsylvania, \$15,000,000; North Carolina, \$13,000,000; Louisiana, \$12,000,000, and Maryland, \$11,000,000. Total indebtedness of all the States is \$220, 000,000, which is less than one per cent. of their aggregate taxable property. The rate of taxation is heaviest in Neva Nebruska and Louisiana. And, though Massachusetta stands second in the size of her debt, she has the lowest rate of taxation in the Union-less than twelve cents per \$100 .- Chicago News.

## Paraphernalia of a Bull Fighter.

The expert Mexican bull fighter, Ponciano Diaz, has left for Spain, taking with him two fine horses—one, the General, for which he has been offered a thousand dollars-six handsomely mounted saddles. valued at \$350 spices; three costly costumes, embroidered in gold and silver, and two hats to correspond with the suits. He goes thoroughly equipped in all the small accessories of bull lighting, besides several costumes and hats for his "picadores."-San Francisco Chronicle.

**ImproveYourMind** IN SPARE MOMENTS INSTEAD OF WASTING YOUR TIME.

A few minutes' earnest study of this excellent work each day will result in your knowing German.

Cheapest and Best in Market.

This Book contains 624 Finely Printed Pages of Clear Type on Excellent Paper, and is Handsomely yet Serviceably Bound in Cloth. It gives English words with the German equivalents and pronunciation, and German words with English definitions. If you know a German word and desire to know its meaning in English, you look in one part of the Book; while if the English word is known and you want to translate it into German, you look into another part of the Book.

It is invaluable to Germans who are not thoroughly familiar with English, or to Americans who wish to learn German. Consider how easily you can master German with the aid of this Dictionary if a harm per day is devoted to study, how much benefit can be dethe knowledge, and hasten to send for this first-class book.
