Human nature breaks out in the National House of Representatives just as it does anywhere else. To stand in the center of the bear pit at the so-called popular end of the capital, and strain the larynx and make a holy show of himself in the sight and hearing of a great audience, is a temptation that more than one of the statesmen can't resist.—Springfield Republican-Times.

An experienced farmer says that a cow that will not average 200 pounds of butter per year is an absolute curse to the farmer. If this be true—and it is probably not much under the truth—a great many farmers are keeping cows that are a constant source of loss to them. Careful tests, which are so seldom made, would show whether each cow were yielding a profit or not, and which ones should be disposed of.

Our exchanges are constantly warning the people to beware of a swindler who is selling this or that. Now we will give the people a rule that never fails, and if followed the people will never be swindled. When you buy, go to the merchant of your town and buy; if you do not get what you want you can return it—buy it with guarantee. Don't be so mean as to pay your money to a peddler, get cheated, and then go to your home merchant and make a poor mouth because you were swindled and then ask him to trust you for his goods.

Luther H. Leber, of Warren, Pa., has invented an instrument for photographing the bottom of oil wells, and it was given a test at that place last Wednesday. The instrument was let down a distance of 1,700 feet. The moment it touched bottom a bright flash lit up the cavity and a perfect picture of the hole was impressed on the negative. It revealed as the effect of the explosive shock a cavity 11 feet broad and seven feet below sand. Rock, sand, pebbles and minute objects were distinctly revealed upon the plate. This is the first time the curious public ever gazed upon a picture taken at such a depth. The invention will prove of incalculable benefit to science and oil men.
