one received for a shorter period

Last year Germany granted only 3921 patents, while England granted 9779, and the United States 20,420.

From the year the patent office was established up to the present time 3500 patents have been granted to females. The first woman patentee was Mary Kees, who invented a machine for weaving a mixture of silk and thread,

A squirrel was killed recently on its way from a grain field in San Joaquin County, Cal., and on examination of its pouches they were found to contain 819 grains of wheat, which goes to show how much damage a fews of these animals

According to the Ne York Herald, "colonists who have returned to this country from Africa report that the condition of the American colored people who have sought homes there is truly pitiable. The climate breeds fatal fevers, and the colonists would all return if they could, but few of them will ever be able to reach America again,"

The Civil Service examiners have some queer experiences. An applicant for appointment on the police force of one of our cities in filling in the replies to questions about his habits, wrote that he took five cocktails before breakfast. Another frankly wrote that he took considerable liquor, and when asked if a physician prescribed it said: "No, I prescribed it for myself."

A Daniel has come to judgment in Montreal, where a man has been condemned to pay one dollar damages for having called upon a person in a factory with the view to collecting debt. The court held that the domicile of the debtor is the proper place at which to demand money that is owing. It further declared that to ask on the streets for money that is due constitutes an assault.

American push is beginning to be not only appreciated but feared in Europe. It has been proposed to hold a World's Electrical Exposition in Frankfort in June next, to be continued for five months. Herr Siemens, Germany's foremost electrician, warns his fellow countrymen that Germany cannot now compete with America in the number of new electrical inventions, and advises that the exhibition be postponed eighteen months, until the disparity becomes less

The Shah of Persia's recent visit to Europe has been very beneficial to his please me subjects. Whether he has grown wise gressive, the fact remains that he is doing a great deal for the improvement of the sanitary and moral condition of the sanitary and moral of the sanitary and moral condition of Teheran. He is introducing sewerage into the city and has broken up what are known in this pert of the world as "dives." It is said that Hadji Hassein Ghooly Kahn, ex-minister to the United States, has greatly assisted the Shah in

J. F. Jameson has been making a study of the voting habits of our fathers, and reports results very interestingly in the New England Magazine. He finds that they were not nearly so faithful in performing that duty as their children are. "When in the spring of 1779," he says, "and the question of having a constitutional convention (in Massachusetts) was to be voted on, a great proportion of the soldiers had probably returned to the State. Yet the vote, in towns enough to make up nearly two-thirds of the inhabitants of Massachusetts proper and a part of Maine, amounted to 5.4 per cent. of the population."

Where would Showman Barnum be if all the world had the same opinions of monstrosities as the Chinese have? enquires the London Figure. A woman in the Fukien province recently gave birth to a boy with four eyes. The mother was very much frightened and wished to have the child killed, but the husband would not allow it to be done. It was finally agreed to exhibit the child for a few days to prevent such an unfortunate affair ever occurring again in the family. The Chinese believe that such deformities are caused by evil spirits. After it had been on view for some time the mother put an end to the child's existence by drowning it in a tub of water.

The mild weather in the early part of winter during the past two seasons, has led many to suppose that the Gulf stream, whose influence upon the weather is considerable, is approaching nearer to the Atlantic shore. The hydrographic bureau of the Navy Department is making efforts to discover whether or not this is true, and captains of Atlantic vessels are being asked to take observations of the temperature as they cross the ocean. The influence of the Gulf stream probably does not extend west of the Rocky Mountains, however, and the present winter has been unprecedentedly warm as far west and north as Lake Superior. Some other influence is probably causing

THE ENGINEER'S STORY.

BY ARTHUR DODGE.

Did you ever hear of a railroad President running as fireman on an engine? Well, I know of one who did, and, if you've got time to listen to it, I'll tell igar you were kind enough to give me.

It was along in the summer of '85 that I was firing on a single track, one-horse road, that runs up from Junction City through Georgetown, a matter of a hundred and ten miles. The road was mostly owned by a man named Thedford-William B. Theford-who was President and Superintendent all in one. I had been firing on the road for two years back; all the time with one engineer, Bob Hunter by name, and a finer man never lived. I suppose it would be only natural for me to speak well of Bob, anyway, for I was clean head over ears in love with his pretty daughter Molly; and was only waiting for a bit of raise in my pay to make her Mrs. Jim Martin. Though I didn't see any chance for that raise where I was, I didn't like to leave and go on another road, for that would take me away from Molly.

One day Bob says to me: "Jim, ain't you and Molly never goin' to get married?"

says I; "but I don't see how I'm going to "Why don't you go and ask Billy?"

You see Billy was what we always called Mr. Thedford-behind his back. of course, for I warrant you we were mighty polite to his face.

won't do anything for me," says I, "for you know either one of the cleaners up to Georgetown would be glad enough to jump into my place, and he of the furnace and the unusual work, ain't a-going to give me a raise just to made him look as if he was in a Turkish

in I went. There he sat a large, heavily built man, with large side whiskers and a pair of gold rimmed eye glasses on his Once in awhite I had to shout at him

"What is it my man? I'm very busy,"

So I up and told him what I wanted.

"Forty-five a month," says I.

Then he pursed up his lips, and emmed and hawed a little, and says: "I don't see how we can give you anything more, my good fellow. Yours is not a very responsible position; merely one that requires a little bodily strength. And we can find plenty of men who would be only too glad to take your place at that salary.'

With that he turned to a letter he was writing, and I knew I had no more busi-

· I tell you I felt sore to be told it didn't take much to know how to fire an engine, and I came mighty near throwing my job up and trying to get in on aner road. But Molly persuaded me to

hold on a little longer.

Now before I come to the particular point of this yarn I want to tell you a little about the road. I have said it was and I flually got home at three o'clock, a single track road running from June- and finding the cleaners a little sobered tion City to Georgetown. The latter up got to bed as soon as possible, for I place was a little town of five or six hun- was clean played out. I told Bob about dred inhabitants; but in summer a great my trip next day, and thought he would many Chicago people came up there, and die laughing to think of old Billy playso I suppose the road paid. Anyhow, ing fireman. But all he said was: Thedford, who had a summer place there, 'I'm afraid that'll settle your hash, was rich enough to run the road for him- Jim, for he'll find out that you worked self alone, if he wanted to.

Bob lived at Georgetown and I boarded with him. Our trips began at eight in the morning, and we generally ran the dering whether I was going to be re-hundred and ten miles in five hours. Then warded for my extra work or kicked out at three in the afternoon we came back, home at eight. As soon as we reached the round-house at Georgetown our day's work was over, for the cleaners showing no signs of his hard work. took the engine then, cleaned and polished her and laid the fire all ready to

start next morning.

Well, as I said, I hung on to my job, hoping that something would turn up same time I think you were trying to get that would give me a lift, till one day in even with me for not doing as you asked August. The whole summer had been nmon hot, but that day went ahead of anything I ever saw. Of course, while your services."

we were running we had a breeze, but At this my h the minute we stopped it seemed as if we were in a furnace; and naturally, working as we were near a hot fire, didn't bring a recommendation from your last improve things any. On the home trip place Bob was taken sick and had all he could do to hold out till we got to the home station, when he got home as soon as possible. After the train was emptied I asking me if I can recommend to them an for which Pope Julius, in 1512, refused ran the engine to the round house, expecting to go straight home and wash head, to run their new fast night expectations. They

But when I had run the engine in, the first thing I saw was my two cleaners laid out on a heap of ashes, dead drunk.

Here was a pretty mess, for it would cerd and the same of tainly take me until midnight to get the privately that I shall never apply to you St. Louis Republic.

machine in proper trim for the next day's run; and a hot, greasy job it was in any weather, but on such a night as in any weather, but on such a night as that was it was frightful to think of it. That's all there is to my story. Molly that was it was frightful to think of it. and I were married, and went to Chicago he asked where Hunter was,

Then he went on to say that if he wasn't sin Chicago the next day, some deal, I think he called it, would fall through, and it would cost him a quarter

"There's a train goes frough Junction City at 11:30 that'll get you to Chicago in time," says I.

"What good'll that do me?" says he. "I've been away for two days, and only just now got the telegram. If Hunter was here he might get me down; but as it is, I might as well go home, and let France and Russia, are as follows. Gerthe money go."
"Mr. Thedford," says I, "Bob is sick,

but I can run this machine to Junction me, as my two cleaners are drunk; as you tender, hardly."

lie, for there were two or three men that having 18,977 men, besides 31,130 men you the story now while I smoke this could have fired all right, but it struck of the chance to get even with Billy, and let him see whether it took any know-how to fire an engine for a hundred and ten miles. It so happened that we had wooded up on the home trip at a little station three miles from Georgetown, so we had plenty of fuel aboard to make the run with.

"Can you do it?" says he. "Remember, it is a hundred and ten miles, and it guns; 137,730 Cossacks, with 240 guns is 8:30 now, so you have only two hours of their own; and 189,500 supplementis 8:30 now, so you have only two hours and a half to make the run that generally

"I can do it," says I, "if you will just jump aboard, pull off your coat, and do just as I tell you.

ur usual speed, that night, making amounting to 3,784,000 men. double time, it was just awful. As we flew around the curves it seemed as if we should leave the track at every turn of the drivers, and the poor old machine rocked and swayed so that, used as I was to it, I could hardly keep on my seat by

the lever. If it was hard on me, what must it

have been to old Billy? I could hardly keep from laughing in his face, as I watched him, and heard him groan as he handled the heavy sticks we

bath. The water ran down his face, his shoulders like a wet rag, and his beauti- swolen, and she was unable to eat. gether, he was the most unlikely looking railroad President I ever saw. to lay the wood more even in the furnace, and would tell him he would get the to rest I told him we were losing steam, "How much are you getting now?" and if he wanted to catch that train, he mustn't let up on the work, If I had thought to hitch a car on when we started. we could have run much smoother: but so on we rushed, now through woodland, now past grain fields, lurching first to one side and then to the other, until I expected every minute to land wrongside up in the ditch. However, luck with us that night, and we pulled up at Junction City at just eleven. Poor old Billy could hardly climb down from the

cab, but he managed to gasp out: "Come to my office at two o'clock next

I learned afterward that, finding the Chicago train was behind time, he hunted up a clothing store and rigged himself it so as to look like a civilized man, which he didn't when he left me.

I managed to find a fireman who was willing to make the run back with me,

"I'm afraid that'll settle your hash, aim more than was needed. The next Saturday, at two o'clock, I reported at the President's office, won-

dering whether I was going to be re-When I entered the office, there sat

At this my heart went down into my oots, for I can tell you it isn't an easy thing to get a new job when you can't

"I have a letter here from the Superintendent of the Chicago and Western, press. I have written in reply that I did not exactly offer Julius \$125,000 for an recommend such a man, one James his biblical treasure, they simply told

However, there was no help for it, and I to live. I took the new train, and have started in. I had barely made a begin-brought her in on time every trip I've started in. I had barely made a begin-ning when I heard some one coming in an; so you can see I've a pretty good the door. Looking up, I saw it was record with the company. I've never Billy Thedford. In a very excited voice seen Billy since, and I don't believe he wants to see me; for Bob told me last 'Home," I said; "and so sick he can't time I saw him that they all called the old man "Martin's Fireman;" that he "My God!" said he; "I shall be knew it, and naturally didn't like it. There's my mate signaling for me now, sir, and I must go .- New York

European Armies.

It appears that it is practically impossible to ascertain the fighting strength of the Germany army when placed on a war footing, on account of the complicated arrangements by which portions of the territorial forces are worked into the many, 884 battalions, 465 squadrons, 364 batteries, 1500 mounted guns, 19,457 officers, 468,409 rank and file. France, City in time to connect with the train 26,763 officers, 534,100 rank and file you want; but you will have to fire for 480 field batteries, with 2060 mounted guns. Russia, 848 battalions, or 386, see, and there isn't another man in this 312 infantry, 328 squadrons of cavalry village knows the engine from the with 57,416 men; 344 batteries of field tender, hardly."

willage knows the engine from the with 57,416 men; 344 batteries of field artillery, with 1542 mounted guns and I hope the Lord has forgiven me that 61,880 men, 331 battalions of engineers "train" service, making a total me all of a sudden that here was a fine of 562,500 men. To these should be estimated as follows. 994,460 men of regular troops, with 4030 pieces of ar-tillery; 280,810 reserve men, with 640 ary reserve men, with 384 pieces of artillery. This estimate is exclusive of local troops. The war footing strength of France is estimated at "about" the following: Active army, about 2,000,-No sooner said than done, and in ten 000, divided into ten classes, according to minutes we had the old engine on the turn table, turned her around, and were off.

If the road was rough when we ran at classes, numbering 762,000, the total

Delicate Operation on a Lioness Yesterday morning Keeper Havens, of

the Gress Zoo, performed a very delicate

The silver lioness, "Mollie," chewed up a piece of raw beef, which the butcher had chopped up with a cleaver, leaving some fragments of bone in the flesh. It is not the custom of the keeper to give the animals flesh that contains any bone at all. In this instance a sharp sliver of The heat of the weather, added to that bone pierced the lioness' gum on the outside of the jaw, next to the cheek, just below the left eye. The place swelled up and festered, and the animal suffered "Well," says Bob, "it won't do any stiff white collar hung down on his a great deal of pain. Her head was

stretching them to either side of the cage and tying them securely. "Mollie" kicked and struggled until the keeper fondled her awhile. After she was secured he entered the cage all alone, and, kuack of it in time. Whenever he tried taking her head between his knees, he cut a small incision in the cheek, took his lance and drew out the sliver, an inch

He did the work all alone, and no one else was present during the performance

of the operation. Yesterday afternoon, after she had been released several hours, he visited the cage, and she met him with a gratified look, holding the wound up to the bars of the cage as if she were glad that he had performed the operation that rener, and she appeared as docile and kindly as a kitten, although she had been fierce and resentful before. -At-

Biting Its Own Body.

Bill King, of Fairburn, Ga., has a horse that has hydrophobia from all ap-pearances. The horse at intervals has pasms or paroxysms. It bites its own to behold how it fastens its teeth in its own fiesh and tears the skin and fiesh from its bones. King says the horse bit him on his arm, but he did not think anything of it until his horse became unmanageable and he tied around his neck a rope and tied the rope to a tree in his The horse would catch his leg in his mouth and bute and pull it until be threw himself on the ground, then he he would turn and wallow on the ground for some time, then he would get quiet, gently get up and stand still awhile. a few minutes he would commence antics again and bite the tree near him. then the rope, and then he would bite his breast and pull the flesh off in strips, then he would catch his legs and pull and bite the skin off in strips, then he would catch his leg in his mouth and pull and jerk until he would fall to the ground. Every one was afraid to go near him. Some suggested bleeding, but no one was found who would undertake the job. Your correspondent and others suggested that the horse be shot and put him out of so much suffering was hunting for some one to shoot horse, -Atlanta Constitution,

The Vatican Library, at Rome, celebrated for its thousands of valuable books, has a copy of the Hebrew Bible,

IN THEIR NATIVE LAND.

Chinamen of Wealth Buy Costly Beds and Bedding-\$5000 Not an Unusual Price to Pay for a Bed. In the land of the Orient, says Wong Chra Foo in the New York Sun, the tastes of the people as regards sleeping from the English and Americans as their daily life. In Japan the only bedding is made in the shape of a huge gown or overcoat with sleeves, and each sleeve odates a sleeper, who crawls into the aperture very much as a kitten would. Like their cousins, the Chinese, the Japa use no sheets, unless the linings of the 'night overcoats" can be looked upon as

Their pillows are miniature bureau made out of either raftan or polished wood, filled with drawers to hold their ewelery and other valuables while they nemselves are asleep.

There are no bedsteads in Japan. The

same spotless floor that answers for table, chairs and dancing stage is utilized for deeping purposes.

In China there are bedsteads, and with the bed clothing form the most ornamental portion of the household furniture. It is as the piano and pillow a well-regulated American house. It is a common thing for a Chinese gentleman to spend \$5000 or even \$10,000 cash for a beautifully carved and jeweled bedstead and \$1000 or more for simple embroideries on the edges and corners of his favorite quilt. These latter are very numerous and varied among those who are able to enjoy such luxuries. None of these coverlet are less than "three-ply" affairs; indeed, such is the superstition among the almond-eyed aristocracy that not one of them could be hired to sleep under a coverlet that is composed of only one or two thicknesses. The former indicates (to their mind) extreme poverty, while two is considered an even or unlucky number. Therefore all the Chinese bed clothes are either padded or a thin sheet of paper is put in the centre. Most all the quilts or bed clothes of the rich are made of silks or satins with highly colored embroidery work on the exterio and lined with strong white silk or fine linen and are only washed about once a

As in Japan, no sheet is used. The Chinese bed making in the morn ings consists of folding up every article of bed clothes in long folds, in such a manner as to expose all the beautiful needle work, and then they are carefully piled one on top of the other upon a neat shelf built against the wall inside of the artistically hung bed curtains. Then the latter is carefully drawn apart to expose the rich rugs and opium layout upon the bed and the folded bed clothes upon the

shelves. The poorer class of the Chinese have only one "pe," or padded quilt, thick enough to keep them warm the coldest nights of winter, while in summer, like the rich, they use nothing save their own undergarments. In other words, it is

a year for cleansing purposes. If a bed in a first-class American hotel were given to a Chinese gentleman he would probably sit up all night waiting for a place to lie down.

Maori Oratory.

The native orators of New Zealand gree with Demosthenes that "action" is the first, the second and the third characteristic of eloquence. A short time after Bishop Selwyn settled in New Zeaand it became secessary to remove the Waimate to Auckland. The native Christians of the former place opposed the removal, and one market-day there was a great deal of speech-making on the subject in front of the Bishop's

A powerful Maori orator opened the debate, his audience being seated either side of the path leading to the residence. Dressed in a handsome native mat, and holding a spear in his hand, the orator began by trotting slowly up and down the path. He began each senten with a run through a given space, and ended it just as he finished his run back. Growing warmer and warmer, he rushed backward and forward, leaped from the ground, slapped his body, stranger, ignorant of the language, would shouted and waved his spear. have thought that the orator was breathing out death and destruction; but he was simply urging the Bishop to stay at

Two missionaries who had been long in the land replied to the Maori orator, One, a stout, old-fashioned English clergyman, with a broad-brimmed and spectacles, adopted the Maori action so far as to march up and down the path elicited shouts of applause,

His brother, taking a spear, marked out a large space on the gravel walk, divided it into three parts, and then asked whether it was not fair that the Bishop should live in the middle of the diocese instead of at the end. Convinced by the marked-out space, the people exclaimed: "It is just."

All in a Hurry. A druggist the other day drew a long

breath as he wrapped up a prescription. "I presume," said he, "there's never any one who comes into a drug store who is not in a hurry. They all rush in as though death were impending in the family, and demand to be waited on at If they want only a cake of soap delay. This is particularly the case with women, but there are plenty of men who are just as had. A woman who will spend an hour in a drygoods store to buy a twocent package of hair pins, will come into a drug store for ten cents worth of perfumery and insist that all work on prescriptions stop at once until she gets it. New York Commercial Advertiser.

HOUSEHOLD AFFAIRS.

SALMON SALAD.

Put in a bowl the yolk of a raw egg and a teaspoonful of sugar, a pinch of salt and cayenne pepper; rub all together. Take fresh or canned salmon; if the latter, pour off the liquor, add it gradually to the mixture, thicken with the pow dered yolks of four hard-boiled eggs until a smooth froth is formed, thin with a tablespoonful of vinegar. Pick the sal mon in pieces, and lay on a flat dish. Break some tender lettuce leaves, and mix in with the fish, and stir half the dressing in, then beat the white of an egg and add it to the remaining dressing pour over the salad, and garnish with nasturtium .- Yankee Blade.

SWEET WAFERS.

Beat a half cup of butter until creamy then add gradually one cup of powdered sugar. Beat six eggs without separating until light, add them to the butter and sugar, add the juice of a lemon, and sufficient flour to make a stiff batter. Heat the wafter tongs over a clear fire, grease with a piece of suet tied in muslin, and put in two tablespoonfuls of the batter, close the tongs, turn frequently and when a light brown carefully lift out the wafer, dust it with powdered sugar and quickly roll it about a smooth, We usually use our ladylock sticks for this purpose. If you do not possess a wafer iron batter a sheet of foolscap paper, drop the batter by tablespoon drop it out thin and bake slow oven. Roll the same as directed above .- Washington Star.

MINCED VEAL.

Cut the veal into very small pieces, but do not chop it. Some bits of cold ham or bacon, cut up and added to the veal, are very nice. Sprinkle the meat with pepper and salt, shake flour over it and let it stand while you make a little white gravy. Take a piece of butter the size of a walnut, rolled in flour, and stir it smooth in a saucepan over the fire; let it bubble for a minute, stirring all the time, to cook the flour, then add a cup of warm milk or cream and some grate lemon-peel; let boil till of the consistency of cream. Add the veal to the sauce and let it get quite hot, but set it back where it will not boil, as that will make the meat hard. Before it is taken up. squeeze in some lemon juice, and serve it on a dish over some bits of toast. It is also very nice with a white sauce made with button mushrooms .- The House-

CHICKEN SALAD A LA PRINCE. Cut the white of cold fowl into neat fillets, using a sharp knife. Mark each piece with a mixture made of one tablespoonful of minced capers, two of minced boiled ham, three hard-boiled eggs, an anchovey boned and mashed, and two sardines freed from skin. All these must be pounded, then rubbed through a sieve; add a teaspoonful of mayonnaise and one aspic. When each fillet has been well coated with the mixture, and has set, line a border mould with aspic tings of their "pes" about twice the layer of jelly, then pour in a little more jelly, until the border mould is full, and set it on ice. When ready to serve, cover a dish with a layer of lettuce leaves. Turn the mould out on it. Fill the centre with a salad composed of cucumbers cut in dice, peas and string beans salad some thick mayonnaise,- Yankee

HOUSEHOLD HINTS.

Ham should be broiled very quickly, and just enough to cook through Tin cleaned with paper will shine better than when cleaned with flannel.

Save the juices that drain out of ros and steaks to add to stock for soups meat sauces: Treat tired or inflamed eyes with bath of warm water five parts and witch

hazel one part, three times a day. If the eggs you have to use for frosting are not quite as fresh as you could desire a pinch of salt will make them

Remove the unpleasant odor of perspiration by using a teaspoonful of ammonia or powdered borax in a basin of water

Flowers can be kept fresh for some time if a pinch of soda or saltpetre is added to the water. Wilted roses will regain their freshness if dipped a minute or two in hot water.

A tonic for the hair is composed of one-quarter of an ounce of glycerine, six ounces of cologne, twenty drops of tinc-ture of capsicum, one and one-half drams tincture of Spanish flies. .

The practice of rubbing the face with yaseline or other cosmetie sometimes makes the hair grow where it is not be coming. Camphor applications, other irritants or stimulation the skin, will cause superfluous hair.

All freshly baked bread should rest on wooden table, with a cloth thrown lightly over it until it is cool enough to put away, when you should wrap it up in another crash towel, one that is dry. By this means you will keep all mustiness out of a new box.

Rub chalk all along the edge of the door that "sticks," then close it as nearly as you can. The chalk will only come off on that portion of the door opposite the part that needs plaining ease the door. So you need not waste your wood and time in planing away any other part.

Cheese which will instantly and in tensely redden blue litmus paper should not be caten. This is a test casy of application, and every merchant on cutting fresh cheese should make it. If the cheese is dry, a bit of it should be moistened with water and the litmus paper then applied.

If a young woman's disposition is gunpowder, the sparks should be kept away from her. - The Ledger.

Stay in doors, and kisses gather,
While we burn her father's coal.
—Kearney Enterprise. Young Mrs. Newbride never told but one of her feminine acquaintances that she returned the skimmer indignantly to

the store from which it was ordered be-

cause when it came she found that it was George-"The ring doesn't seem to fit very well, Clara. Hadn't I better take it back and have it made smaller!" Clara-"No, George; an engagement ring is an engagement ring, even if I have to wear it around my neck."-

"Lizzie," remarked Sir Walter Raleigh to the Queen, "wherein do a man's sins resemble a bill collector?" "In good truth I know not," replied her Majesty. "Wherein do they?" "In their pensity for finding him out," quoth Sir Walter. -Munsey's Weekly.

"Master Charlie, you are to go home at once. If you stay out a moment longer you will be punished." "Was it mom or pop who said I should be punished?" "Your mamma." "I'll be home in an hour or so. A fellow can take care of himself, I guess, when he's ten."-Philadelphia Society.

Gentleman (to young lady from Richmond, on the cars)—"Beg pardon, but I am a physician. Your companion is very pale. Is she seriously affected!" Young Lady—"Painfully so, I assure you." "An aneurism, perhaps?" "No; I think his name is Arthur Jones."— Richmond Recorder.

A correspondent writes to ask a conundrum. He says: "What is the difference between a pair of suspenders and a bread knife?" We give up the conundrum and recommend that, if the correspondent really wishes to learn the difference, he essay to cut bread with a pair of suspenders and try to keep his trousers up with a bread knife .- America.

Electric Light and Plants. In the course of a recent lecture before

the Royal Society, England, Dr. Siemens placed a pot of budding tulips in the full rightness or the electric light in the meeting room, and in about forty min-Dr. Slemens's experiments have been made with quick-growing seeds and plants, like mustard, carrots, swedes, beans, cucumbers and melons. The pots, the fecturer stated, were divided into four groups, one of which was kept entirely in the dark, one was exposed to the influence of the electric light only, one to the influence of daylight only and one to daylight and electric light in succes-The electric light was applied for six hours each evening-from 5 to 11and the plants were then left in darkness during the remainder of the night. The general result was that the plants kept entirely in the dark soon died; those exposed to the electric light only or to daylight only throve about equally, and those exposed to both day and electric light throve far better than either.
