THE FARM AND GARDEN.

VALUE OF SALT AS A FERTILIZER. All plants contain more or less sait, T and the more of it as the soil is sufficidntly provided with it. Salt is neces-sary for the digestion of food, hence salt 3. 1 is an indispensable element of plant food. Grass and pasture are especially benefited by it. Five hundred pounds of cheap sait, sold for the purpose at 33

about \$6 per ton, may be applied now as soon as the grass starts growth. Clover is equally benefited by it. Mangels and other root crops should receive from four hundred to six hundred

pounds per acre; cabbages, and especially asparagus, need sait. Oats and wheat are benefited by it, the effect of it being to stiffen the straw and enlarge the grain, giving it a clear, bright skin. The salt has also a benechial effect on the soil by its chemical action.

THE CARE OF LAMES.

At lambing time the pen should be made extra warm and comfortable, as lambs dropped during severe cold weath-er (especially if Merinos or fine wools) soon become chilled unless the room is fail to own her lamb, it is best to tie her up in a separate stall; or, better still,

partition off one corner of the pen so that fow tablespoonfuls of warm milk, mixed horses. with one-tenth part of brandy of whisky;

or, in the absence of these, a few drops of Jamaica ginger or pain-killer may be administered with the milk. This treatment, with wrapping in a woolen blanket and placing near the stove, should soon restore the lamb to vigor.

If it is placed in the pen with others, it is a good plan to place upon the nose of the mother a few drops of the same material that was mixed with the lamb's drink. This hint will often cause the ewe to own her lamb, or even a strange lamb, when otherwise trouble would be experienced.

The first six hours of a lamb's life is the most critical time; hence many farmers will go to the barn at midnight to will pay the average farmer to breed look after their flock, and it often pays to do so, as a well-kept lamb is worth in Cotolory not here then 92 to October not less than \$2.50, and often \$4 a saler and better profit. is obtained for them. When a week old lambs will begin to eat the leaves and clover heads, and also the fine leaves of their favorite, and should be given them if possible. It not only adds grewth,

but makes them strong and hearty. No doubt some of the ewes will become thin in flesh. These, with their lambs, should have a separate enclosure, and be fed an extra ration of grain, placing the feed trough low enough so that that the lambs may also eat a portion of it. Remember that to be successful in

lamb raising one needs healthy sheep, good food, warm quarters and prompt attention .- New York Examiner.

CARE OF MILE.

A cheese manufacturer in this State, says George E. Newell in the American Agriculturist, has had the following pointed advice printed at the head of the dividend sheets he issues to his patrons: "Take good care of your night's milk, it will pay you." Where milk is delivered at the factory only once in twenty-four hours, more than ordinary attention at the dairyman's hands is necessary to pre-serve its quality. Especially is this true in hot weather, and on nights when the air is disturbed by electrical storms. It is of vital interest to the manufacturer to add water to the contents of the pit, and always receive good milk, for the repu- if the water was hot, it would be all the tation of his stock must be maintained, more effective in starting the fermentaand profitable money returns yielded to tion.

FARM AND GARDEN NOTES. Many repairs are now in order.

Frequently give your hens new, clean

The market is seldom overstocked with the best.

A light and effective movable fence is desideratum. Cut the burs and cockles before turn-

ing in the sheep. Keeping the weeds cut is better than sulling them out.

Rats destroy millions of dollars' worth of grain annually.

Wait until the frost kills the flie before painting your buildings. The fall is the seeding time for weeds. Destroy them before the seed falls.

The tond is one of the best friends or the farmer and destroys many insects. To kill blue grass growing between

bricks around the lawn, wash the bricks with salt water or strong solution of soda It is said that typhoid fever has been traced to a dirty pig peo, the virus com-ing into the house on the unwashed feet of flies.

Care should be taken to keep can warm, or prompt attention is paid to them by the attendant. Should the ewe are fatal to stock. Horses will not how ever, cat the stalks while gathering. Bright oat straw run through a cut-

ting box and mixed with bran and a she may not be shut away from the flock. little ground cats, slightly moistened, If the tamb becomes chilled it may be fed a makes one of the best fodders for

In cutting seed potatoes cut the eye with a slant toward the butt or stem end, and cut past the maiddle of the potato leaving as much of the eye on the potato as you can. Be careful that your hay does not be-

come heated in the burn. Hay, to keep well, should be well cured and dry before storing, and it should not be packed too heavily. Professor Augur, of Connecticut, rec-

mmends sprinkling cabbage with brine strong enough to bear an egg as a remody for the cabbage worm. It is also good for the cabbage.

It is only in exceptional cases that it

In plowing stony land for seeding to grass, put all small stones into the furrow and cover them, and lay all larger ours timothy, cornstalks, etc. But clover is out on the furrows and afterward draw

Three-quarters of an ounce of salt to the pound of butter will be the right quantity for most markets for immediate onsumption, and one ounce to the pound for packed butter.

When tomators are on stakes or trellises it is a good plan to nip off the tops. Side shoots push out the sooner, and from these come the fruit. There is no advantage in so much height.

Kickers among colts and calves are usually bred, not born. Handle them gently and kindly and kickers will be rare. Teasing by headless boys and hired men originates most of the farm kickers. Teach the boy to do his farm work so

that it will be admired, and you give him something to think about that adds zest to his work. Teach him to be as neat and tasteful in his work as in dress, and you develop valuable qualities, such as may hold him to the farm.

If the cora crop is not harvested and siloed when there is moisture in the stalks to start rapid fermentation, we should certainly, says Hoard's Dairyman.

his patrons. Of deeper significance also Early cabbage are not usually as hard is the public health, which may be jeo- and large as the later kinds. They are parelized as greatly through carclessness intended to afford a supply while waitand ignorance in the dairy as by loose ing for the better varieties to come in. sanitary conditions in the face of a pesti-lence. The thought of eating "hurt It is time to have the seed for early mest" fills every one with abhorrence, plants sowed in the hot bed, and the yet the consumption of tainted milk is as dangerous to human health. Milk may develop a fatal poison, and yet reveal little of it to the sense of smell. There is a valuable aid to the bean grower. The are two general species of taint that affect chief expense in growing lima beans is milk. When warm from the udder and lying in a deep vessel it generates one character of decomposition, and rank winds. Those who have tried the bush odors emanating from decaying animal beans claim that they are fully as pro-or vegetable matter cause the other. To liffe as the pole beans, as well as being To make thorough work of the weeds by stirring, or by driving air through the mass. The fluid should not be vioonce and burned up if dry enough, or airing, or a partial separation of the but-two years before returning to the land ter globules ensues. In whatever char-acter of vessel milk is stored over night, done with a cuitivator and harrow in a the material of course being tin, free large pile; it does not take much time, circulation of air should be secured un-but needs attention every ten days in the One of the reasons why praches do not succeed on hud long cultivated, is lack of mineral plant food. The peach usually planted on light or sandy land, that has at best very little mineral. The seed cannot form without potash, and lacking this the seed fall off soon after setting. It is believed by some that lack of potash is the predisposing cause of the disease known as peach yellows. the disease known as peace in the disease known as peace in the disease known as peace in the set on ten feet high with a shingled roof, ins been cured by heavy applications of

HOUSEHOLD AFFAIRS. GRAPE PIE.

Pop the pulps out of the skins into one essel and put the skins into another. Then simmer the pulp a little and run it through a colander to separate the seeds. Next put the skins and pulp together, and they are ready for jugging or for pies. Ples prepared in this way are nearly as good as plum pie, and that is

very good. GOOSEBERRY FOOL A very delicious dish with a queer ame-"gooseberry fool"-comes to us from our great-great-grandmothers, and is particularly acceptable in warm weather. Boil green gooseberries until tender, much the fruit to make juice, adding but little water; mash through a hair sieve. To a quart of the strained

berries allow a coffee cupful of sugar, and boil up once. It is delicious when cold, and should be eaten with cream. If the latter is fresh it will not curdle. It is also very uice with boiled custard. Rhubarb may be prepared in the same manner.--New York World.

RECIPE FOR ANGEL CARE. The New York World's Housekceper finds the following recipe for angel cake very good: Sift the flour once before souring, then take one tumblerful of the sifted flour and add to it a level tea-

spoonful of cream-of-tartar and sift six seven times. Sift the sugar oncewdered is the best-and measure a mblerful and a half of the sugar and mix with the flour and cream-of-tartar. Take the whites of eleven eggs and beat them to a stiff froth. Add the flour and sugar slowly, beating all the time. Flavor with a teaspoonful of vanilla. Bake

about forty minutes in a very slow oven. Cover the cake for the first twenty-five minutes. It should be a very light delicate brown when done. Let it remain in the pan when done. Slice with a sharppointed knife held perp larly.

FOTTED LIVER

Farmers who live at a distance from a market will find this a delicious use for the liver of the yeal which they may kill, as country butchers often do not appreci ate the value of a yeal's liver and will give as much for an animal without either that delicacy or the sweetbreads. Boil the liver until tender, turn out in a wooden chopping bowl and beat with a wooden potato masher while hot. Re-move all skin and gristle and pound to a paste, seasoning with salt, cayenne, cloves and mace; add enough of the gravy to make a smooth and creamy paste and pack in small cups or jars. Pour melted butter over the top of each until well covered and keep in a cool place. It is very nice for luncheons or supper in hot weather. Turn into a platter, slice thinly and serve with thin strips of but-

tered bread, white or brown, or spread over hot buttered tonst .- American Agviculturist. HASTY PUDDING OR MUSH. As this is a favorite American dish, the recipe is for a large quantity. The flour in this case is added for advantage in frying

the pudding when it is cold; the pudding when hot is eaten with milk, sirup, butter or gravy. Put two quarts of water into a clean saucepan, with a level teaspoonful of salt; set it over the fire, and when it boils stir in a pound of Indian meal and a quarter of a pound of flour mixed to a ooth paste with a pint of cold water; add the flour and meal gradually, stirring constantly with a pudding-stick to prevent the formation of lumps. When the pudding is quite smooth let it boil steadily for an hour, stirring it often enough to prevent burning; constant boiling improves the flavor of the pud-When there are no measures conding,

Sixty Years in the Service.

Though the winters of nearly three

years does not exceed thirty. He-be

ing the oldest man in the service, and

having performed more than one heroic

not a drinking man to any extent, not a

total abstainer by any means, but he al-ways uses liquor in moderation. He has

not a living relative in the world that he

knows of; he has always been, as he ex-

presses it, "a bird alone." He was not more than twelve years old when he en-

tered the navy, and a man-of-war has

been his home ever since. He is now a

shipped boatswain's mate, and his pay

amounts to between forty-five and fifty dollars per month. He has been most

severely wounded in two or three en-

gagements, as the scars still visible are

testimony, and they are of no delicate

description either, but quite the reverse.

The Tourist Fears Not Bullets.

is running the rounds of the press in South America, and it is one which is

peculiarly characteristic of British cool-

ness. While the Government and insur-

gent forces were face to face in the re-

cent Argentine abortive revolution, pour-

ing deadly volleys of bullets into each

other's ranks, an English tourist and his

wife, arrayed in all the traditional equip

ments of puggarees, etc., quietly pushed their way through General Roca's troops,

and, taking their stand in the very front,

coolly levelled their field glasses to sur-

vey the fight with the same sang fiold

with which they would have witnessed a

sham combat at home. General Roca-who since has become Minister of the

Interior-was so struck by their courage

MOST THREATENING.

MOST THREATENING. At the Social Science Congress held in Sanatoga, a paper entitled "Social Science Problem in Inderiety" was read by Dr. T. D. Crothers, Superintendent of the Walnut Lodge Hospital, of Hartford, Conn. He said that notwithstanding all the advances of civilization and intelligence, and the increas-ing temperance agitation and effort, the drink evil or inderiety is most threatening and omninous to social progress and develop-ment to-day. In 1889 over 500,000 persons were arrested in this country charged with being drunk and disorderly. Nearly twenty per cent, committed crime of petty character while under the influence of spirits. The great question of to-day is not so much tho cure of this army, or the checking of its mor-iality, but of prevention.

HÖUSEHOLD HINTS.

For polishing furniture beeswax and turpentine are very good, but plenty of elbow grease is essential.

White paint that has become discolored may be nicely cleaned by using a little whiting in the water for washing. Save all your old white muslin. It makes good dusters and will also be useful for cleaning windows, as it is free from lint.

A good way to remove ink stains from carpets is to sprinkle salt over the soiled spots and pour on boiling water; do it several times, if necessary.

For cleaning glasses belonging to mahogany furniture, use either powdered whiting or scraped rottenstone mixed with sweet oil, and rub on with a chamois

Eggs shells crushed into small bits and shakon well in decanters, three parts filled with cold water, will not only clean them thoroughly, but make the glass look like new.

The walls of each room should be brushed, a duster should be tied over a broom and then passed up and down. The duster must, of course, be shaken from time to time.

For cleaning windows and mirrors one of the best things is plain soft water and chamois leather, having a dry chamois leather as well to polish with afterward. This process will not answer near the sea, because of the salt in the atmosphere.

The scrubbing of floors should be done with bath browthust or sind and ordi-nary household soap. The object of the brick dust or sand is to whiten boards. After washing leave all the doors and windows open for it to dry very quickly, which also helps to whiten the boards.

When tublecloths are worn beyond monding cut square pieces from the best parts of them and here them neatly. They make nice napkins for the little children to use at the table, and also do nicely for them to carry their lunches to school in, for if they are stained or lost it will not matter much, as your sets will not be broken.

Precautions Against Consumption.

In a circular on precautions against consumption, published by the State Board of Health of Pennsylvania, the following a tvice is given : "The duster, and especially that potent distributer of germs, the feather duster, should never be used a room habitually occupied by a consumptive. The floor, woodwork and furniture should be wiped with a damp cloth. The patient's clothing should be kept by itself and thoroughly boiled when washed. It need hardly be said that the room should be ventilated as thoroughly as is consistent with the maintenance of a proper temperature."

COOLING OFF.

A Detroit physician during the recent warm weather in that city, so says a news-paper of Detroit, taught two of his friends a practical lesson in the way to keep cool. The inree gentlemon were walking along the street in the hot sun, when they passed a sa-

"I must have a glass of beer to cool off on," remarked one whom we may call Tom, "Will you have some, friends" "I think I will," replied Henry. "Excuse me," said the doctor, "I nover cool off that way. Let me show you some-thing. Tom, let me feel your pulse. Now you, Henry. Now then, Tom, get your beer,"

beer." While Tom was drinking his beer the doc-ior seated Henry in a chair and gave him a fan. At the end of five minutes Tom joined them, saying: "Ah-h, but that goes to the right spot! I feel cooler." "Do you?" asked the doctor. "Your pulse has just increased eight beats to the minute, while Henry's has decreased six, making a difference of fourteen in his favor. Wait a bit: don't let's start unito yet."

It was not norreen in his layor, wait a bit; don't lot's start quite yet." It was not more than three minutes before Henry laid down the fan, foeling cool enough, while Tom pulled out his handker-ohisf and said: "For heaven's sake, let's get out of this place, or I shall reast! I'm wet all over!"

"There's the case I want to make out," said the doctor. "You are warmer than be-fore, and will be for an hour to come. Our friend has lost his thirst, and is cool enough for a foot race."

TEMPERANCE NEWS AND NOTES.

A "Temperance Day" was one of the feat-ures of the Edinburgh exposition. Chicago has one saloon for every forty votors, and a policeman for every two hundred voters.

Comptroller Onahan, of Chicago, says that seventy per cent. of the license fees of the 5000 saloons of Chicago are puid by brewers. Jersoy City has a law under which fines of \$100 each nre to be imposed upon persons de-tected drinking malt or alcoholic liquors in her new parks.

There will be a grand temperance rally in connection with the corn paince fair at Sioux City, Iowa, at which leading temper-ance speakers have been invited to speak. From recent statistics we learn that of the one hundred and odd counties in Kanass thirty-seven have empty jails, fifteen have only one prisoner each, and forty-four have no paners.

At the temperance congress held at Chris-tiana, Norway, preliminary stops were taken to form an international fosgue against the use of alcoholic drinks. The headquarters of the league will be Zurich, Switzerland.

A lady of Atlanta, Ga., finding that a sa-loon was to be established near her residence, decided to propare and circulate a protest for signatures. Her efforts were so success-ful that her would-be neighbor was obliged to seek other quarters.

to seek other quarters. A saloonkeeper who paid \$1900 for license to sell liquors ten days within the Somons County, California, fair grounds met a strong opposition in two barcels of pure cold water presided over by of the county woman's Christian Temperance Union. Newfoundland will soon be added to the working held in St. John, fifty-six ladies when permanent organization will be com-pleted.

Oklahoma Guide Book and Mapsent any wher on receipt of Stels, Tyler & Co., Kansos City, Me

We've heard of a woman who said she'd walk five miles to get a bottle of Dr. Pierce's Favorite Prescription if she couldn't get it without. That woman had tried it. And it's a medicine which makes itself felt in toning up the system and correcting irregularities as soon as its use is begun.

Go to your drug store, pay a dollar, get a bottle and try it-try a second, a third if necessary. Before the third one's been taken you'll know that there's a remedy to help you. Then you'll keep on and a cure 'll come,

But if you shouldn't feel the help, should be disappointed in the results-you'll find a guarantee printed on the bottle-wrapper that'll get your money back for you,

How many women are there who'd rather have the money than health? And "Favorite Prescription" produces health. Wonder is that there's a woman willing to suffer when there's a guaranteed remedy in the nearest drug store-

Dr. Pierce's Pellets regulate the Stomach, Liver and Bowels. Mild and effective.

LOVE'S LABOR'S LOST by many a woman who strives works hersell to death in the effort. If the house does not look as bright as a pin, she gets the blame-il things are upturned while house-cleaning goes on-why blame her again. One remedy is within her reach. If she uses SAPOLIO everything will look elean, and the roign of house-cleaning disorder will be quickly over.
