A State Banquet Relie

Mrs. Harrison has made a number of most interesting discoveries within the past year in regard to pieces of furniture and articles used in the state dining room, the result of her researches having from time to time been noted through these columns

The latest thing in this line, and decidedly one of more than usual interest to the public, is in regard to the gold bordered mirror lake which has figured as the central ornament at countless numbers of state hanquets. All that has "retofore been known in regard to it

that it had been in use for this pur-

a far back in the early days of the vernment when state banquets were less frequent occurrence, though none he less ceremonial affairs, than those of the present day.

From papers containing undoubtedly reliable information it has now been astained that the long mirror, with its utiful gilt bronze openwork railing, ibelished with figures, was purchased in rance by the United States Minister in rdance with an order to the effect 2) the first President of the Republic. in its arrival in this country the table ment was taken to Philadolphia and first used by General Washington on the ecasion of a great state banquet at the midential mansion in 1791 .- Washgton Post.

A Murderous Shell.

It is reported from Munich that the new explosive which has been adopted for the German artiliery makes a shell of most murderous effectiveness. The best shells used during the Franco-Prussian war only covered an area, when exploded, of some forty paces, and in bursting seldom injured more than seven or eight persons. Experiments with the w shell go to show that it will deverything within an area of 900 Some of the fragments will be nough to kill a map, others aland calculated to merely briafe the skin. In an experiment an prinous target was riddled with thousands of holes by the bursting of a single Jur shells were sufficient to obsolete ironelad used as a tar-Kiel. It is said that one battery, e range were accurate, could anniinte a whole division .-- Picayune.

We begin killing led to kill sheep because the system about the middle of September, or as craves for nourishment that it does not fusel of. get. There's not a farm where grain has been fed, especially cotton or linsaed meal, but the evidence may be read in the fertility of the soil. These grains are so rich in plant food that the ani-mals take but a small per cent. in its passage through the body. If you know that dam and sire are without weaknesses, we would say to a correspondent, there is no danger in close inbreeding. The trouble is that it is difficult to know that. It is not to be forgotten that our improved breeds are largely the result of inbreeding. Some men will plow and work around bowlder for half a lifetime. The cheapest way to dispose of it, if it is too large to be hauled off, is to dig a pit and topple it over into it. We have seen many an unsightly, bothersome stone effectually disposed of in this way. Pigs cannot be grown prolitably on whey alone, but when fed with commeal and shorts there is a marked saving. Seven pounds of whey about equal one of comment when they are fed together, and therefore when the former's worth twelve dollars per top whey is worth eight cents A growing hog will, if of good breed, and pushing their chips out through increase fully one pound in weight every the entrance hole, like the hickory and cay of its life. If it does this it is other wood borers, and the vine soon dies. | pretty sure to leave a profit over cost of With the early crop of potatoes their work does little damage, but second early and late—unless very late— he/ reduce the yield from one-fourth to one-half, by checking the growth. In my potatoes this year every third or fourth hill had a borer, and many of the vines were dead August 1 that ought to have been Match Heads for Percussion Caps. A countryman in Tennessee, where forests and game are plenty, found that three sprayings of the vines with Paris green might prevent the laying of the egg; or, what is more probable, two or ago, and the first thing he knew they came short of percussion caps a few days ago, and the first thing he knew they were shooting with match heads as a substitute. How many boxes of matches he had lost in that way he did not say, but he found they fired as clear as the cap itself. It is said that necessity is the mother of invention. Here is a chance for some man to make a fortune by getting out a "new patent." All that is necessary is to adapt the gunlock to the "match head." The patent would be readily adopted by the rifle clubs that get up shooting matches .- New Orleans

TEMPERANCE.

THE BISING ALCOHOL TIDE.

The steadily increasing liquor production, as shown by the official reports of the In-ternal-Revenue Department, both of dis-tilled and formented liquors, may well cause all friends of temperance to inquire anew as to what can be done to more effectively arrost and to turn back this rising alcoholic tide. A genuine total abstinence reviva', thus to reduce the demand, would be a per-manently effective way to reduce the alco-holic supply.—National Temperance Advo-cate.

DRINK IN NEW YORK'S "UPPER TEN."

DRINK IN NEW YORK'S "UPPER TEN." It would be a pleasure to believe that there is nothing in the stories told of the drinking habits of New York "sassiety," but the in-dications are that there is altogether too much truth in them. A book has been pub-lished by one of the society publishers which is written by a lady and is evidently intended for ladies who entertain; and in its contents are recips for "mixed drinks, "cupe" and "punches" which the author groups under the suggestive title of "Drinks a is Mode." If there can be need enough for such a work to justify its compliation society drinking and scatcely be a lost art.-Detroit Free Press.

HOPE FOR THE DRUNKARD.

HOPE FOR THE DRUNKARD. In a recent article, entitled "Hope for the Drunkard," the New York Observer anys "A man may have ceased to realize the power of an old appetite. He may even have forgotten the very taste of the uhing that once he loved, and yet he is safe only as he truats a stronger power than his own. He is on terribly treacherons ground when he declares it impossible for him to be again ensiaved.

"Binared."

DRINK AND DEATH.

DENNE AND DEATH. In a general way all know that strong dirik shortens life, and individual instances of death induced by alcohol are abundant; but the extent of its ravages is only dimly seen. Dr. N. S. Davis, formerly Fresident of the American Medical Association, cites "In 1757-8 the distillation of liquor was stopped in England, on account of scarcity of grain for three years, and the mortality for an for three years, and the mortality for an increase in the consumption of spiriti was attended by an increase of 1433 deaths. In 1796, there being a scarcity of spiriti was attended by an increase of 1433 deaths. In 1796, there being a scarcity of spiriti was attended by an increase of 1433 deaths. In 1796, there being a scarcity of spirit, distillation was suspender and the mortality in London decreased 1801 in one year. The mortality which had increased dots in 1800 on account of increased by a distillation, decreased as distillation de-

The statistics of the rise and fall of the number of deaths in London," says an eminent physician, "established the fact that the mortality of a people will increase or decrease in proportion as the consump-tion of alcoholic liquors is augmented or diminished."

diminished." As a measure of public health the whole hiquor business from beginning to end should be stopped. It should be quarantined like small-pox, it should wear a danger sign like diphtheria, it should be stamped out like leprosy; it should be restricted, prohibited, annihilated; and the sconer it is done the better.—Safeguard.

WHAT SOME DRINKS ARE MADE OF.

The Rev. Madison C. Peters has been do The Rav. Madison C. Peters has been do-ing this community a service by personally obtaining and causing to be analyzed samples of the bighest priced gin, whisky, brandy, port wine, sherry and beer and causing them to be analyzed by expert chemists. His discoveries, if not absolutely novel and surprising, are timely and edifying. "Fure Holiand gin," according to this testimony, contains neutral spirits, rotten corn, jumper berries, turpentine and vitriol. Kentucky whisky was found to consist of neutrial spirits, glycerine, sulphate of zinc,

Machino-Made Music,

Harp-playing by machinery is one of the latest novelties. The harp is ar-ranged so that the plane of its strings is horizontal, the instrument lying on the table, after the fashion of a zither. Then, as regards the written music, the notation of the traditional stave has been abandoned, and sheets upon which are imprinted mysterious groups of numbers are used in its stead. When one of these sheets is slid into a frame made for the purpose the meaning of the figures is interpreted.

Each of them falls under a string of the instrument, and by picking at them in numerical order with a bevelled pencil of ivory the operator produces a tune. Time and phrasing are indicated by the spacing and alignment of the numbers, for are the requirements of harmony forgotten.

When the melody of the air is adjudged insufficient one of the figures is accompanied by a letter, indicating that a button attached to the instrument, and bearing the same symbol, should be at this juncture pressed. This action, by bringing a small saw of ivory points into play, produces a cord suitable to the occasion .--- Pall Mall Gazette.

Wood Mosaic Industry.

The wood mosaic industry is carried to great perfection in France. The scale of colors is extremely rich, as no less than 12,600 different shades can be used,

so that all descriptions of paintings can be faithfully reproduced in this way. The great advantage of this mosaic is that in case the colors should fade they can be restored to their original freshness by planing, because the fibers of the wood are entirely permeated with paint. The mosaic is durably affixed to boards with the grain at right angles, so that no atmospheric change can affect it .- Chica-

All That is Needed.

All That is Needed, In our physical needs we want the best of anything required, and we want all that is required to be done, to be done promptly and surely, and those in pain, especially, will find all that is needed in what is herein recommended. Mr. T. J. Murphy, 61 Debevoice pl. Brooklyn, N. Y., says: "Having been afflicted with sciatic rheumatism for some time past and finding no relief, 1 trie1 St. Jacobs Oil which I found very efficacious."-Miss Clara Alcott, Mahwah, N. J., writes: "I bruised my limb, and it became greatly swollen and stiff. I used two bottles of a patent liniment which did not relieve me. A physician was called who ordered the limb to be poulticed, and he gave me medicine internally, without benefit. then got a bottle of St. Jacobs Oil, which cured me. It acted like magic."-Mr. Lorenze Buck, Bancroft, Shlawasses Co., Mich., says: "I had chronic rheumatism for years, con tracted during the war. After sitting or lying down, at times, I could not get up, from stiff-ness and pains. At work my strength would give out, then I would pass through a sicknes "August Flower"

The use of the bridal vell originated in the custom of performing the nuptial ceremony under a square piece of cloth held between the faces of the bride and bricegroom to conceal the blushes of the former.

The "Barley Syndicate," of Chicago, Ill., has purchased 250,000 acres of land in North Dakota on which to settle Germans to grow barley for malt purpores.

soon as nights are cool enough thoroughly to cool off the beef. We kill yearling heifers because they make bet. ter beef than steers, and are not worth as much money. Heifers sell at two cents and two and one-quarter cents per

pound, gross. That makes our beef net us four to four and one-half cents, and gives us a chance to get rid of all bad colors and low grade cattle .- Journal of Agriculture.

POTATO VINE BORER.

In the past five or six years there has appeared in this section, writes Dr. A. G. Chase of Kansas, an enemy of the potato that is seriously affecting the yield. It is a borer, about an inch and a quar-ter long by two lines in diameter, pinkish brown on the back, with a light yellow, narrow stripe on the sides. Indeed, I think there may be more than one kind of these borers, although I have never found but this one in the potato; but I

have found another and different worm in squash and pumpkin-vines and in the common "careless" or hog weed, as it is often called. In the potato vine they do their work chiefly from the middle

of June to July 10. They generally enter a few inches above the ground and work per hundred. up and down, hollowing out the pith

in vigorous growth. I am not an entomologist to recognize the moth, or to hatch the worm. I have thought that two or three thorough dustings with insect powder, but I have not tried either .- .- .. American Agriculturist.

THE RESSIAN FLY.

The Hessian fly has more or less in-fested the wheat fields of many of the States during a period exceeding 100 years. It is an imported intect and its introduction about the time of the landing of the Hessian troops in Revolutionary times has led to its name.

Picnyune. Professor F. M. Webster, now consulting entomologist at the Ohio Station, describes the insect as a small two-winged fly about one-eighth of an meh long and of a dusky color, appearing during May and June and again in September and October. The eggs are deposited on the
