Many Georgia farmers are dropping the culture of cotton for that of tobacc

It is generally believed that the Russian Government maintains spies all ever the world who keep it posted about the operations of the Nibilists.

In most of the countries of Europe tha manufacture of salt and tobacco is controlled by the Government. The Swiss Government now proposes to buy up all the match works of Switzerland and make their manufacture a Government

Genoa is preparing to celebrate the fourth centenary of the discovery of America, by an Italian-American Exposition, the aim being to strengthen the friendship and increase the business relations between the native land of Columbus and that discovered by him.

Now that they are beginning to realize the effect of outside competition in England it is amazing, declares the American Dairyman, the number of dairy schools that are springing up in all directions, and most, if not all of them, itinerant at least for a part of the year.

During the English Protectorate over Egypt irrigation has been extended in almost every direction, thus increasing the agricultural productions to a wonderful extent. Last year Egypt raised 400,000,000 pounds of cotton, or nearly one-fourth of the entire quantity consumed an Great Britain.

It is stated that Japan rice is now shipped from Japan via the Canadian Pacific Railroad to Chicago, a distance of 7000 miles, at a total cost of eighty cents per hundred bunds, while it would cost, if shipped via San Francisco, thence by rail, \$1.31; the cost from Japan to Chicago via. the Canadian route being less than from San Francisco by rail to

The Chicago Post exclaims: "As the world moves, and as surely as the sailing vessel replaced the galley, as the swift locomotive took the place of the post horse and stage coach, as the trained lightning displaced the courier, so will coal, cumbrous, costly and grimy, give place to some more perfect, more etheral sence, evolved from itself, distilled from its liquid essence, or it may be to that kindred invisible agent that springs forth spontaneous and perfect at the touch of the drill."

eye of wonderful power. A visitor to his "menagerie," in Paris, where he has gathered various kinds of animals for experimental use, saw the chemist quell with a glance a fierce Spanish mastiff which for his ferocity had been muzzled and chained. Pasteur had the brute brought before him, and looking the animal straight in the eye fearlessly took off his muzzle and removed his chain. The dog cowered at the glance, then fawned upon Pasteur, licked his hand and finally lay submissively before him.

Among the numerous petty principalities of Germany is the Grand Duchy of Saxe-Coburg Gotha. The whole population is less than 200,000, and its very existence would be scarcely known, but for the eccentricities of the Grand Duke who takes pains to let his hostility to the reigning house of Germany be known on all occasions. He, however, has no children, and his heir apparent is the Duke of Edinburgh, whose wife is sister of the Czur of Russia, and at heart an intense Russian, especially in her dislike of everything German. The possible complications are interesting as illustrating the influence of personal prejudices in the politics of Europe.

M. M. Cowley, a pioneer in the Northwest, who for many years dealt in furs with the Calispel, Spokane, Cour d'Alene, and Columbia River Indians, and is one of the best informed men on all matters pertaining to the tribes in the Northwest, says that the Indians are dying off rapidly. "Take the Cour d'Alénes, for instance," he says. "I was among them for a long time. They have a magnificent reservation and fine farms and good houses, but the houses are killing them. They can't stand roofs. When I was located on the Spokane River, there were immense bands of the Cour d'Alene, Calispel, Spokane, and Columbia River Indians about there. They were engaged steadily in hunting and trapping all kinds of wild animals. I bought black and silver gray fox skins of them at \$1.50 and \$2 apiece, 500 martins a year at \$10 each, fisher, grizzly, black bear, beaver, and other kinds of skins without number. Then the whites had not encroached on them, and they were robust and healthy. It is a mistake to try and civilize them. They must be wild or they are nothing. If we keep on civilizing them, we shall have no Indians. Apparently this is something the Government will not un-

WHEN? We'll read that book, we'll sing that song But when? Oh, when the days are long! When thoughts are free and volces clear; Some happy time within the year, The days troop by with noiseless tread, We'll see that friend, and make him feel The weight of friendship, true as steel; Some flower of sympathy bestow, But time sweeps on with steady flow, Until with quick, reproachful tear,

We lay our flowers upon his bier. And still we walk the desert sands, And still with trifles fill our hands. While ever just beyond our reach, The deeds we have not done, but willed, Remain to hannt ns_unfalfilled -Boston Journal.

LOVE AND WAR.

candidates for the command of major, and while those most favored for that strained, Captain Phillips got up on a going to get married.

"Who is your Major Falkenburg going to marry?" demanded the Northerner.

"Oh, a Miss Charity Blank, at Florfeaty to the Government, and advised against jealousy, bad temper and extrava-gart words. Even in a day of much speechmaking it was the perfection of timely oratory, and it won the union and finally fell on the ears of Colonel Phillips.

won more. It gave him the office, and "Fires of Tophet!" raved the Colonel, from that day until the summer of 1863

was sent accross the line to Florence, Ala., with instructions to destroy some cotton and woollen mills in that city was Sunday. He fussed around till he which had been busy for a year or two making clothing for the Confederate detail of 200 men, for it was well known soldiers. Colonel Phillips was in command, and so well did he do the work that, although quite a strong body Confederates was posted to defend the down faced straight for Fiorence. town, he won the fight after an hour of struck a patch of canebrake about midaharp contesting and drove the last night, for the march had never been Johnny Reb out of Florence. Then the abated for darkness. Here he hid his of Union soldiers held the town.

But in that sharp afternoon encounter Billy Neal, a fellow-townsman of Colonel Phillips and a member of his regiment, was badly wounded and went into the hospital which was established at Piorence, and into which the disabled died away the Federals were in comfrom both armies were admitted. the good women of the town turned visitors, after Federal trol was assured, was Colonel Phillips. A few days later the Colonel came again sympathy and cheering him with the kind words of an old friend,

The Union force was soon afterward withdrawn from Fierence, but the patients remained in the hospital there, and so strong was the Colonel's attach ment for his unfortunate friend that he several times went back to the Alabama frightened. town to see him. At length the Confederates came back and occupied the city, throwing out pickets and holding the place with all due formality, but with no great force and with no intention of ic. mazing a fight to hold 't against superior ' And the first time after this to see Killy Neal, his brother officers advised him to forego the visit. The boy was in good hands and doing well, they The women of Florence were as attentive to him and those of the North as to those of the South and it would do no good to go there and chase the Johnnies out. But he was going. He pulled his slouch hat over his eyes and asking: started for permission to go scouting with 200 men. He swore quietly as he went about it, and those who see these signs in Judge Jesse Phillips to this day know he means what he says.

The Ninth was mounted infantry at this time, and if the dashing Colonel didn't ing to his feet. "The dickens!" take 200 of the best riders and the best who they were. They went across the carefully polite. Early Marriages of Royalty.

A glance at the pages of history reveals the fact that early marriages long been the fashion among earth's royal personages. Here are a few instances. Queen Victoria was married when she was scarcely twenty-one, and the Prince of Wales espoused Princess Alexandra before he was twenty-two. The Emperor of Austria took to wife the was not yet twenty-four years old. The present Czar of Russia was twenty-one when he gave his hand to Princess Dagmar of Denmark (who was two years his junior). King Humbert of Italy was twenty-four at the time of his marriage to the fair Marguerite of Savoy(then a girl of only seventeen). The present King and Queen of the Belgians were one eighteen and the other seventeen at the time of their wedding. And the late King of Spain, Alphonso XII., was very little older when he formed his brief, bright mion with his charming cousin, Mercedes. He was only twenty-two when he married his second wife, the present Queen regent. And it was at the same age that the present Emperior of Germany was united to Augusta Victoria of Schleswig-Holstein-Augustenburg. unfortunate Prince Rudolph of Austria was twenty-two at the date of his illstarred union to Princess Stephanie of Belgium.-Chicago Post.

An Example of Scientific Screnity. Dr. Richet, the famous physician who died quite recently at Paris, gave during the course of the disease which carried him away an example of scientific serenity, the equivalent of which can be found only in the biographics of ancient philosophers. During the few days of his pulmonary congestion Dr. Richet professor of physiology at the Paris faculty, and by another doctor, a friend of his. He did not cease making to his symptoms, and predicting the course of the disease and its possible complications. At every new step of the invasion of the organs Dr. Richet defined it with great precision. On the last day, when he had hardly any vitality left, he told them: "When the phenomenon which you have just ascertained has occurred, every chance is lost, and death is only a question of seconds. In fact, you see, I am going to die. . . I am dying." . These were his am dying,"

DUSTRY IS CONDUCTED.

The Men Work in Pairs, a "Hooker and a "Scutter"-Great Dexterity and Endurance Required.

CTIVE life on a sponging ves-sel begins about 3 A. M. in fine weather, all hands being then called by the cook to prepare for the labor of the day. After the men have dressed and washed, coffee is served to them, and when that is disposed of they turn their attention to mending any cars, poles or boats that may need repairing. Breakfast is served about dawn, and finished before it is light enough to begin the work of the day. In summer the men are often in their boats at 4:30 A. M., and searching for sponges as soon as they have light enough to distinguish one species from another Two men work in each boat, and

while one sails it the "hooker" lies on his chest near the bow and closely scans the depths below through his water This apparatus consists of an ordinary wooden pail with a piece of glass in the bottom. It is kept as deeply buried in the water as the "hooker" can keep it with one hand without putting

The sea being usually clear the man can descry sponges fifty feet below him, and, if he is experienced, can distinguish the various species at a glance, each having some peculiarity of eye or form to mark it from its congeners.

On noticing a valuable sponge the "hooker" signals or calls to the "sculler" to stop the boat, then takes hold of the long iron-prouged pole which lies in "chocks" beside him, lifts it over his shoulder with the right hand and sinks it to where the marine growth he desires is fastened. If the prongs get under the sponge the "hooker" gives his wrist a peculiar inward and upward turn which may loosen the bunch immediately, or he may have to work at it a long time before bringing it to the surface.

The poles used for gathering sponger vary from eighteen to forty-four feet in length, and while pliable and well balanced are difficult to handle in tideways and deep water. They are generally placed in "chocks," lengthwise the boat, about five feet of them being in front of the "hookers." These men must, therefore, lift the remainder over their shoulders by main strength, raise the further end almost perpendicularly in the air, and send the hooked end down to the sponges as promptly and directly as

When a sponge is torn from its home and friends it is placed in its natural po-sition in the boat to allow the blackish fluid called "gurry" to flow away, and to prevent the bunch from being injured in shape and texture, for shape has much to do with its sale, the roundest and most even bringing the highert price. Spongers usually work with the tides and take every advantage they can of currents and shoals.

As soon as a boat is loaded, the seul ler lifts an oar as a signal to his vessel to come up. The cook, who has charge of the vessel while the crew are at work, promptly responds to the signal, and on oming up to the boat receives its load aboard, each bunch being carefully placed upwards along the railing. The cook is kept busy aboard the

vessel, for he must not ont only prepare the meals and arrange the spong deck, but he must also sail his craft in such a manner that he will be able to keep in sight of all his crews, which may number from two to nine, and respond promptly to their signals of "boat full; take us aboard.'

About 12 o'clock the chef sails his craft as closely as he can to the center of the widely scattered boat crews and blows a long, loud and mellow blast on a punctured conch shell to announce that dinner is ready. This melodious call is answered by an immediate cessation of work, and within fifteen minutes every boat's crew is aboard. After washing themselves carefully, they sit down to an oon is similar to that of the morning, and is comprised in sculling, "hooking or in vain efforts to find marketable

The "sculler" only uses one hand at a time and can rest that at intervals, but the "hooker" can have no change except to transform one form of arduous labor from his chest to his arm, and as that is done by the same set of muscles he is often so weary at the close of the day that he can neither sleep, eat nor think calmly about any matter. The constant leaning with his chest on the gunwale of the boat while searching for sponges through the water-glass produces blo "hoils," which often burst while he is tugging at a refractory bunch, and the steady use of his right hand in handling a heavy pole causes the veins on his biand neck to swell and become so sore that he cannot bear to be touched Some become so inured to the labor after a while that it does not cause them any great inconvenience for a few years, bu the majority have to finally relinquish it

for something less arduous.

Even the "scullers," whose lot is suposed to be an easy one, are not as onstant standing in the hot sun, and the using of their arms give them severe headaches and necks and faces that resemble boiled lobsters in hue.

The spongers work as long as it is light enough to enable them to see the growths on the bottom, then return to the vessel. The vessels engaged in sponge gathering in Florida work over three separate long stretches close to the western and southern coasts of the State. The most northern grounds extend from Cedar Key to Apalachee Bay; the second from Cedar Keys to Anclote, and the third from Biscarne Bay to Key West.

The best grounds range from five to lifteen miles from the mainland, and have a depth of water varying from two to seven fathoms. This proximity of the grounds to harbors of refuge makes ponging comparatively safe, even in the stormiest weather. - Detroit Free Press.

The first ingot of nickle steel to be used for the manufacture of armor for the United States Navy was cast in a mold weighing fifty-six tons. The ingot weighed 60,000 pounds. This armor plate will be used on the Maine.

A snake moves by means of the ribs and the scales on the abdomen, to which each rib is attached by a set of short muscles. These scales take hold of the surface over which the serpent may be passing, and in that manner aid the creature to glide, often very rapidly, around the trunks of trees and along the smaller

Machinery is now made for the manufacture of all kinds of casks and tubs, so hat no handwork is required. Flour barrels are made in this way for six cents each, and other kinds in proportion. If butter firkins sell for forty cents each, it seems as if the business of making them, where lumber is cheap, might be profitable, if the cost of shir ment was paid by the purchaser,

A Norwegian farmer has invented a curious lock in which the bolt is released by a stroke from a pendulum bob. The pendulum, invisible from the outside, is moved sufficiently by blowing sharply several times through a hole in the door, but the puffs of air can be given at the proper time only by swinging a key pendulum, previously adjusted, to vibrate in unison with the lock pendulum.

Air plows, V-shaped contrivances, to be placed on the front of engines of fast express trains, are the latest scheme to get more speed by overcoming much of the natural resistance of the air to the front of the locomotive. The plow extends from a few inches above the track to the top of the smokestack, the sharp rdge, of course, in front. "Shoveling log" is a common expression among rail road men, but plowing wind is a new

Saved From Snicide by His Dog.

An intelligent pet dog owned by Louis Schmidt, of Camdem, N. J., has prevented him from committing suicide. Schmidt is just recovering from a serious attack of typhoid fever, which left him very nervous and subject to fits of melancholia. He was seized with one of those spells Monday night, and while his wife was asleep stole to the kitchen Here he procured a rope, and, making a noose, tied one end to an iron hook in the wall. Then procuring a chair he adjusted the rope, and kicking away the chair swung himself off, as he thought, into into eternity. But, unknown to Schmidt, his faithful dog had followed him, and instinctively knowing some thing was wrong the intelligent animal went back into the bedroom whining pitifully. Finally he awoke Mrs. Schmidt by tugging at the bed clothing and rubbing his cold nose in her face, and sh she missed her husband. There she found him hanging from the hook. She managed to cut him down in time to save his life,-Philadelphia Times.

An Epidemie of Heliotrope.

We are about undergoing an epidemic of heliotrope and the green tints; we are going to have it bad. The trouble will run its full course; it will be something like the vallery greenery craze that struck us along with Oscar and his long locks some ten years ago, and is directly traceable to the prevalence of the seventeenth century styles in decoration, and we are sorry for it, for those delicate colors which looked well and were charming against the fresh painted faces of the court beauties of Lous XVI and the powdered wigs and silken attire, white stockings and laces, would show to horrible disadvantage against our modern dress and honcomplexions .- The Upholsterer.

GOLD IN THE STARS.

[A meteorite recently found contains gold in its composition. Several scientific Ho, poor folks all over the earth! Have you heard it, the beautiful news, To relieve you from poverty's dearth,

And to save you from poverty's blues? A meteor fell in the West That was striped with auriferous bars, And scientists therefore have guessed That there's plenty of gold in the stars,

Then away with all hunger and woe, And away with all sorrow and want, Let your spirite exultingly flow While you join in the glorious chaunt,

Oh, why be with sorrow oppressed! There is gold in Arcturus and Mars, In the Dipper, the Twins and the rest-There is plenty of gold in the stars! O, ye toilers with sensitive souls.

Who are chained to a tedious grind, Now the burden away from you rolls And is left in the distance behind. Cast the shackles that bound you away And forget the disfigured scars-You can soar as you will from to-day, There is plenty of gold in the stars

Oh, ye slaves to the rigors of fate, Who live but to struggle for bread, Whose love has been curdled to hate Till ye sigh for the peace of the dead; Bid good-by to the era of wrong, Bid good-by to the pitiless bars Behind which ye have struggled so long, There is plenty of gold in the stars.

Let us hear of injustice no more. Nor of riot surrounded by dearth; God is merciful now as of yore, And has never forgotten the earth. Ye who grovel in poverty's ditch, Look to Jupiter, Venus and Mars; They are nearer by far than the rich, And there's plenty of gold in the stars#

ger-"What's the matter; trichinosis!"

-New York Sun. Serious Artist-"I think you knew the model for this figure—poor beggar, deaf and dumb." Light-hearted Friend "I know-used to sit at corner of street. Deaf and dumb! By Jove, you've made a 'speaking' likeness of him! Wonder-

Johnny-"Where are you going?" Tommy-"Home. Don't you hearmaw a callin' me?" "That's nothin'. Sho called you two or three times before." "Yes, but she's out at the peach tree now cuttin' off an ultimatum." -Indianapolls Journal.

"There go the Spicer Wilcoxes, Hadn't we better call?" tainly not, dear. If they're dying to know us, they're not worth knowing, The only people worth our knowing are the people who don't want to know us!'
