put up between each layer of bundles to prevent their heating. They may either be kept in boxes in a cool cellar or pitted

in the open ground." The above direc-tions for preparing and storing the cut-tings are as given by the author of the

work named, and are those generally practised by market gardeners. The sets

are left undisturbed until the early plant-

ing of cabbages, cauliflowers and similar

vegetables is finished, then the horse-

radish sets are planted between the rows

and at about the same distance as the

cabbages. When the crop of early cab-

bages, cauliflowers or whatever it may

be, is removed, the horseradish receives

thorough and frequent cultivation up to

the time the roots are ready for digging

late in autumn. But If you do not care

to plant horseradish as a second crop, then put in your sets as early as con-

venient in the spring, planting them in

rows two or three feet apart and twelve

to eighteen inches in the rows. If set

three feet by one foot, you will need 14,-520 for each acre. The richer the ground the larger the roots, and while

stable manure is the best, you can use al-

most any good commercial fertilizer as a

substitute, applying from one-half up to

one ton per acre. The yield of roots, for what may be considered a good crop

of horseradish should be about five tons

ing will be more profitable.

Pens are always sown with oats when they are intended for fodder. The Canadian peas are preferred, as the seed is not injured by the weevil, and there is no loss by this damage. Weevil-eaten peas will not germinate when the germ is injured, as is generally the case, and if not, the substance of the pea being partly destroyed, the strength of the young plant is lessened for the want of nutriment that is furnished to it by the seed. One and one-half bushels of the peas and two bushels of the cats are own. The strongest kind of oats are chosen, as they hold up the peas better than the weaker kind. It is advisable to cover the seed with a cultivator or a harrow, as three inches of covering is necessary .- New York Times,

A SOILING EXPERIMENT.

The indications from this experiment are: The average cow will eat about seventy-five pounds of green feed a day, kept in the stable with grain ration ad-

That cows feed on oats and peas, clover and corn, fed green in the stable in midsummer, will give more milk than when feeding on a good blue grass pas-

That a cow fed on green feed in a stable darkened and ventilated will gain in weight more than she will in a wellshaded pasture.

That the cow responds as promptly to well-balanced ration of grain while eating green feed as she does on dry feed.

An acre of peas out green weighed 13.5 tons. An acre of peas and oats cut green

weighed 24 tons. An acre of corn cut green weighed 33.6 tons. The second cut of clover in a drought

It is not necessary to cut green feed oftener than twice a week, if it is spread

Articles on "Time of sowing grass seeds, winter wheat and oats."—James Wilson, Director Iowa Experiment Station.

SWEET VERSUS SOUR CREAM.

Still another of our old cherished beliefs knocked higher than Gilderoy's kite. It has always been a settled fact with butter-makers that when cream was allowed to stand until it became very sour, the acid developed in some way destroyed part of the butter fats, so that such cream would produce less butter proving the roads. than the same cream would have produced had it been churned while in a milder state of acidity. However, we are told by Professor W. W. Cooke, of the Vermont Station, that his experiments have proven that this acid does not in any measure whatever destroy the butter fats. He says: "We have followed a good many lots of milk all the way from the cows to the butter-tub. both when churned sweet and when churned sour, and the results check out the same in either case. A great many generally they are a nulsance. figures on this subject were published in the last report of this station, and many more on a large scale have been obtained since then, all pointing unmistakably to a non-destruction of fat during the process of souring." Perhaps this is another case of non-churnability. It may be that while the fat is there the churn can't get it, but we will probably know more about this by-and-by.

THE ADVANTAGES OF BITTING.

Where bitting is done properly it has many advantages, while the improper use of the bitting machine often leads to serious consequences. Many horsemen believe that if a colt has no style born in him he never will acquire it. However orous pet game cock with good partridge true this may be, it is possible, with the bitting machine, to greatly improve the style that a colt naturally possesses. Besides, it teaches him restraint that he would not learn otherwise. The ma-chine consists of a bridle checkrein, for a few days. girth, crupper and two side straps. Use a common straight bit, and, preferably, a side check, fastened high up on the bridle. The back pad of an old harness is good if the terrets and check-ring are taken out, so the colt can roll over if he throws himself. Put the back piece or girth on, and buckle it tight; fasten the check to it, and bring the colt's head up where he carries it naturally. The side straps are fastened about half way down on each side of the girth, and the loose the Toulouse gander with Embden ends buckled into the bit rings. These geese will secure this the most readily. are to prevent the colt from turning his head to either side, and should be light enough for this, but not to pull his nose in much. Put this on him every day for an hour, and turn him in a paddock, or loose box. Gradually take up the checkrein, until his head is brought where it is wanted. It may take two or three months. If the training is pushed too fast, or the check is taken up too much at one time, or the machine is left on too long, it may do irreparable barm. When done thoroughly this strengthens the muscles of the neck so the colt will always carry his head up. It will also help to improve his knee action. - American Agriculturist.

CULTIVATION OF HORSERADISH. It is estimated that between five and six hundred acres are devoted to the cultivation of horseradish by what are called the market gardeners in the immediate vicinity of New York, and perhaps as much more near other large cities. The author of "Gardening for Profit," gives explicit directions for the cultivation of this crop, or at least how it is cultivated by our market gardeners, for with them it is always grown as a second crop, as follows "In preparing the roots for market during the winter all the small rootlets are broken off and reserved for planting, leaving nothing but the main root, which is usually from twelve to fifteen inches long and weighing about three-quarters of a pound. The rootlets or sets are cut into pieces of from four to six inches in length, and are from one-quarter to one-half inch in diameter; these are tied in bundles from fifty to sixty, the top end out square and viz: their appearance upon the the bottom end slanting, so that in plant- stand in market is fine and cleaing there will be no danger of setting pin feathers being white, are no them upside down. These sets when pre- whereas every dark pin feather

TEMPERANCE.

Talk not of the failure of Temperance.

Nor ask where her triumphs have been,
For wherever her banner hath floated,
Oh, there may her trophies be seen!

And I know in a beautiful future,
Prom the dawn to the setting of sun,
A land she hath blessed and redeemed,
Shall tell — bright Temp'rance hath
done. THE TROPHES OF TEMPERANCE.

-National Advocate.

TEMPERATE SOLDIERS BEST. Out of 70,000 British troops in India 18,000 are teetotalers. Sir Frederick Roberts himself says that "for every 5000 teetotalers enrolled, the strength of the British army is practically increased by another battalion" The authorities in India make an annual grant of 5000 rupees for temperance work, and give the use of a room in every corps for meetings, as well as allowing refreshment bars to be opened, the profits of which go to temperance work, so that the men are encouraged in every way to remain true to their pledge.

RPECIALLY SIGNIFICANT.

It is stated that the publisher of the Wine and Spirit Bulletin has bought a tract of fifty acres of land in the suburbs of Louis ville, Ky., to be converted into a select mansion and villa district. It is also amounced that ten of Kentucky's leading distillers and wealthy liquor dealers have joined in the enterprise and have purchases: lots with a view of building. What is specially significant about this transaction is the fact that the title deeds for the estate contain a provise prohibiting the erection of places for the sale of liquors.—Chicago Standard.

PETITION BY TEMPERANCE WOMEN.

The petition of the World's Woman's Christian Temperanes Union, for the protection of the home, addressed to the Governments of the world, reads as follows: Honored Rulers, Representatives and Brothers—We, your petitioners, although belonging to the physically weaker sex, are strong of heart to love our homes, our native land, and the world's family of nations. We know that clear brains and pure hearts make honest lives and happy homes, and that by these the nations prosper, and that by these the nations prosper, and the time is brought nearer when the world shall be at peace. We know that indulgence in alcohol and optum and in other vices which disgrace our social life makes misery for all the world, and most of all for us and for our children. We know that stimulants and opiates are sold under legal guarantees which make the Governments partners in the traffic by accepting as revenue a portion of the profits, and we know with shame that they are often forced by treaty upon populations either ignorant or unwilling. We know that the law might do much, now left undone, to raise the moral tone of society and render vice difficult. We have no power to prevent these great iniquities beneath which the whole world groans, but you have power to redeem the honor of the nations from an indefensible complicity. We therefore come to you with the united voices of representative women of every land, beseeching you to raise the standard of the law to that of Christian morals, to strip away the safeguards and sanctions of the State from the drink traffic and the opinm trade, and to protect our homes by the total prohibition of these curses of civilization throughout all the territory over which your Government extends. PETITION BY TEMPERANCE WOMEN.

SPECIALLY SIGNIFICANT.

THE OCCASIONAL GLASS.

THE OCCASIONAL CLASS.

It is difficult to convince many otherwise excellent people that there is any harm in taking an occasional glass of wine or other intoxicating beverage at the table or elsewhere. They never drink to excess, it is said, and why should they deprive themselves of a harmless indulgence because other men are too weak to control their appetites. This is the usual argument, but in the present situation of things at least it is a cruel, selfish, unmanly and unchristian argument.

It is the old cry in a new form, "Am I my brother's keeper?" St. Paul answered this most effectively when he said, "If meet make my brother to offend, I will can no flesh while the world standeth."

There is true manliness in this, the true Christ-spirit. "I will deny myself," the aposth might have added, "even so harmless and so important an article of food as meat, if the eating of it shall cause my brother to stumble and fall into sin. It is not absolutely essential that I should eat meat to sustain my life. There are plenty of other kinds of food good and wholesome, to which I may resort. I will restrict myself to these if by so doing I can save a single one of my fellowmen from a life of sin and shame." Would that the moderate drinker would apply such logic as this to himself.—Sacred Heart Review.

PETITION BY TEMPERANCE WOMEN.

A few months ago I was present in Dr. Garnier's consulting room watching the prisoners from the depot filing past. We were informed that a child had been brought by its parents to be examined. These people were shown in; they belonged to the respectable working class, and were quiet and well mannered. The man was the driver of a dray belonging to one of the railway stations, and had all the appearance of a stalwart working man. The boy was scarcely six years old; he had an inteligent, rather pretty face, and was neatly dressed.

"See hare, M. is Doctent," said the father, "we have brought you our boy; he alarms us. He is no fool; he begins to read; they are satisfied with him at his school, but we cannot help thinking he must be insane, for he wants to murder his little brother, a child of two years old. The other day he nearly succeeded in doing so. I arrived just in time to snatch my razer from his hands."

The boy stood listening with indifference and without hanging his head. The doctor drew the child kindly toward him and inquired:

"Is it true that you wish to hurt your lit-

plied:
"I will kill him; yes, yes, I will kill him?"
The doctor glanced at the father and asked in a low voice:
"Do you drink?"
The wife exclaimed indignantly:
"He, sir! Why, he never enters a public house, and has never come home drunk."
They were quite sincere. Nevertheless the doctor said:
"Stretch out now."

doctor said:

"Stretch out your arm."

The man obeyed; his hand trembled. Had these people told lies, then, in stating that the man had never come home the worse for drink? No; but all through the day, whenever he had called to leave a puckage, the people of the house had given him something to drink for his trouble. He had become a crunkard without knowing it, and the poison that had entered his blood was at this moment filling the head of his little child with the dreams of an assassin.—Fortnightly Review.

TEMPERANCE NEWS AND NOTES. California brandy, according to Senator Standford, is made "to save the wins which would "spoil."

General Booth, of the Salvation Army, says that nine-tenths of the evil that he has to fight against in the social department of his work is caused by drink.

According to statistics the braweries of the world consume yearly 4,000,000 tons of barley and 70,000 tons of hops. British breweries consume 56,000,000 tons of barley and 70,000 tons of sugar.

England is known as a "bright little, tight little island," and it must have been very tight last year after consuming its share of the 142,250,000 pounds starting worth of alco-holic drink which represents Great Britain's "ias" for 1831. "jag" for 1891.

Mrs. Hitchcock, President of the Nebraska Woman's Christian Tamperance Union, writes that they have the names of 8000 children on the pledge cards, which will be used to decorated the white ribbon depart-ment of the Columbian Exposition. Ata certain intersection of streets in Phila delphia there is a saloon on one corner, a doctor's office and a drugstore on a second, an undertaker's establishment on a third and a burying ground opposite. The Ledger cuts this "a model arrangement."

The Templars' Standard, South Africa, anyotes nearly two pages to a graphic ac-count of a meeting held by "two American ladies" (Mrs. Elizabeth Wheeler Andrew and Dr. Kate Businelle, as a result of which a Woman's Christian Temperance union was formed in Johannesburg numbering sixty members.

Those who advocate the use of light wines as a preventive of droukenness, and point to France as an illustration, should read an article in a recent issue of the Petit Journal, Paris, which declares that of all, the dangers measure the agricultural population of France the gravest and most difficult to right is alcohol power. A Ventriloquist's Threat.

Professor R. H. Mohr, the ventriloquist, went through a strange experience the other day. In one of the laboratories of the Harvard Medical School he submitted to an examination of his throat and chest by a number of physiological experts, to determine what special formations gave him his peculiar powers.

The experts are uncommunicative concerning the results of the examination, and the professor, who is not a physiologist at all, did not learn much about him-

nelf. "They put mirrors down my throat," he said. "They led me by narrow passages into a dark chamber, and what they did there I don't know. After it was all over they told me that my larynx was flatter than that of other men and shaped something like n woman's, and also that one of the stops, in my throat was drawn downward instead of upward by the connecting muscles.

"I can't make much out of that explanation, but I can make a living out of my peculiar throat just the same.' Then the professor threw his voice un-der the table and laughed hoarsely.-

Questions Often Asked.

Boston Herald.

Q. What is Alabastine?
A. Alabastine is a durable coating for walls

Q. What is Alabastine?
A. Alabastine is a durable coating for walls and cellings.
Q. Is it the same as kalsomines?
A. It is entirely different from all other proparations on the market?
Q. Wherein does it differ from these kalsomines on the market?
A. It is made from a cement that goes through a process of setting on the wall, and grows harder with age.
Q. What are kalsomines made from?
A. From whitings, chalks, clays or other inert powders for a base, and are entirely dependent upon gine to hold them on the wall.
Q. Why do kalsomines rub and scale?
A. Because the gine, being animal matter, decays in a short time by exposure to air and moisture, and the binding qualities of the material are then gone.
Q. Does the Alabastine contain any injurious substance?
A. Alabastine has been most carefully tested.

Q. Does the Alabastine contain any injurious substance?

A. Alabastine has been most carefully tested, and is recommended by leading scattarians throughout the country, on account of its sanitary nature.

Q. What has the same investigation shown regarding wall paper?

A. Sanitarians condemn in strong terms the use of wall paper for walls of living rooms on account of the poison used in its manufacture.

Q. Can snything but plain work be done with Alabastine?

A. Any kind of work, from which the condemn in the c

labastine? A. Any kind of work, from plain tinting to

A. Any kind of work, from plain tinting to the most elaborate decorating can be done. Q. How can I learn to do this work and dec-erate my house? A.
