THE DREADED CHOLERA.

Some Interesting Points About the

Cholera is an ancient disease. East Indies are never entirely free from it. The pestilent deltas of the Ganges and the Brahmaputra are regarded as the breeding places of this disease. During the long period when there was practically no communication between that locality and other parts of the world, it was confined to the native Indian population, and when it made its appearance among the Europeans in Calcutta and other cities of India it was believed to be a new disease. Its known history begins with an epidemic in Ceylon in 1804. In 1817 it raged with great violence in Calcutta and spread all over by the children and an excellent male India. It broke out in the army of the Marquis of Hastings, quartered near there, and counted its Florims by the thousands. In 1819 it made its appearance in Ceylon and was carried to the coast of Africa. The next year it appeared in Asia and followed the ture of the day; all were moved to tears, rivers into China. On the Island of and the hearty applause which followed showed the deer appreciation of all. Java alone 150,000 people died: Cholera made its first appearace in

Europe in 1822, just seventy years ago. It was carried across the Persian Gulf by vessels, and spread in many directions, following the waterways. It was then checked for seven years, when the Master's service. it broke out again in Russia, without any apparent cause, and in 1830 occurred the first general spread of the disease in all parts of western Europe. In 1831 it reached central Europe, breaking out in Berlin in August and England in October. The next June it had reached America, appearing first at Quebec and Montreal. It was especially violent in New York, and spread as far west as Chicago. It was at this time that Henry Clay presented a resolution to Congress requesting the resolve, President to set spart a day for humiliation and prayers for deliverence. In 1833 the disease reached the ports on the Gulf of Mexico and Cuba, and was carried thence to Spain, and spread along the coast to all the cities of the Mediterranean.

In 1837 the cholera disappeared from Europe, but ten years later it reappeared through the same gateway from the Orient, following practically the same course. It reached Hamburg in September, 1848, and two months later broke out simultaneously in New York and New Orleans, brought over by immigrants. Its next appearance was in 1853-54, when occurred the terrible epidemic at St. Petersburg. The next visitation was in 1865, when 7,000 persons died in Paris in five months. The following year the Prussian army passed through a district which had been infected by cholers died than had been lost in the Austrian war. In 1873-75, and several times since, cholera has prevailed in some Among other things the Grand Jury enjoyed a long period of immunity. But we have learned the vast im-
