The demand for California canned and dried fruit has increased till, the San Francisco Examiner declares, it is almost a boom.

It is proposed to change the uniform of the Berlin police. The present "outfit" is too heavy and cumbersome, sapecially the helmet and sword.

For the first half of the current year the returns of no less than seventeen English railroads show a falling off, and the loss in coal freights is responsible for more than half of that.

The German merchant marine stands next to that of England. In 1889, the latest year from which figures have been published. German vessels made 66,834 voyages, carrying 21,398,522 tons of cargo.

The New York Commercial Bulletin says that "it may be necessary to secure Congressional action to relieve importers of the hardship of paying full rates of duty for merchandise that has been inpaired in value by processes of fumigation."

The presiding officer who used a revolver as a gravel, the other day, in an Atchison (Kan.) deliberative assembly, had no difficulty in maintaining order. The chair will always be respected, avers the Atlanta Constitution, when it is ready to blow off the top of somebody's head for un parliamentary behavior.

A butter merchant of London was recently fined rather heavily for selling butter that contained twenty-eight per cent, of water, whereas in ordinary circumstances the percentage ought not to he more than fourteen to fifteen. Is proved in court that at the time the sales were made the defendant was away on his wedding tour, and yet the court refused to accept the excuse, holding that an employe ought to know the law.

When the President passed through Philadelphia recently, the carriage conveying him to the ferry was temporarila delayed at Ninth street. A small news. boy standing on the curbstone called out: "Mister, give us a ride?" "Where are you going?" asked the Chief Magistrate of sixty millions. "To Camden." was the reply. "Jump in then," said the President, and the boy clambered eagerly into the carriage, his stock of papers under his arm. "When the ferry was reached," says the veracious Philadelphia Chronicle, "the newsboy presented the distinguished gentleman with one of his papers as a mark of gratitude, the gift being accepted with grateful acknowledgments."

A study of the meteorological data of Idaho leads to the conclusion that the humidity of the atmosphere is increasing year by year. Never since the settlement of Idaho has there been such an immense crop all over the State as during the present season. The product of grass and grain has been wonderful. Scientific estimates attribute this result to a change in climate produced by the multiplication of irrigating canals, which moisten a great extent of country and create a humid atmosphere. It has been observed that frequent rains now fall during the months of July and August. Nature is closing up the gap between the wet and dry seasons and equalizing the rainfall. Many believe that the time is not far distant when the arid lands will become arable.

Speaking of the establishment of banks for the benefit of farmers, a recent writer says: "The Ponch idea is for the Government to a vance \$2,000,000 as capital to enabl; each municipal district to establish a bank of simple form, which shall oe managed by an agricultural syndicate or a select number of farmers who would decide upon the solency of the applicants for loans, and who would collectively become a guarantee to the Government for the amount of the rebt. The money advanced by the State would be loaned at a rate of interest lower than that paid to depositurs in savings banks, and the State would have the right of inspection at any time of the bank's affairs, while the responsibility for its assets would rest with the farmers or body acting as a Board of Management. Paper would be discounted for as small a sum as one dollar, and the farmer would be able to deal direct with the wholesale vendor of seeds, fertilizers or agricultural implements, giving his paper in payment of his bill, the bank cashing the same for the merchant and the farmer redeeming it after harvesting his crops. The farmer would thus save the expenses of the middle man and also effect a saving of four to five per cent, in discounting his paper, the management, of course, being careful, as they would be responsible, that loans were made only to economical and progressive farmers of good standAUTUMN'S MIRTH

Tis all a myth that Autumn grieves, For, watch the rain amid the leavest With silver fingers dimly seen It makes each leaf a tambourine And swings and leaps with elfin mirth To kiss the brow of mother earth, Or, laughing 'mid the trembling grass, It nods a greeting as you pass. Oh Thear the rain amid the leaves-'Tis all a myth that Autumn grieves!

'Tis all a myth that Autumn grieves, For, list the wind among the sheaves; Far sweeter than the breath of May, Or storied scents of old Cathay, It blends the perfumes rare and good Of spicy pine and hickory wood, And with a voice as gay as rhyme, It prates of rifle I mint and thyme Oh! ecent the wind among the sheaves-'Tis all a myth that Autumn grieves!

Tis all a myth that Autumn grieves, Behold the wondrous web she weaves; By viewless hands her thread is spun Of evening vapors shyly won. Across the grass from side to side A myriad unseen shuttles glide Throughout the night, till on the height, Aurora leads the laggard light. Behold the wondrous web she weaves-'Tis all a myth that Autumn grieves! -Samuel Minturn Peck,

## THE CHILD.

monarchy, alighted from a back on the Pont Neuf, close to a liberty tree surmounted with its red cap. A man, who had been leaning for some time against the pedestal from which they had dislodged the statue of Henry iV., came cagerly forward and lifted his fur cap. His hair was close cropped in Revolutionary fashion, and he wore a ragged carmagnole open at the throat, without any cravat; but even thus disguised, the lady recognized Maurice Despies, one of the youngest and most promising advocates in the last Parliament.

"Maurice," she said, "your dress is admirable; but that does not insure your safety. I have sent for you to take me before the Revolutionary Tribunal."
"I, Delphine, take you before these executioners!"

"You know that our friend, Lefebvre, is brought to trial to-day."
"Yes, I know that, Delphine, and I know, too, that he will not be alive to-

"And I, Maurice, know that I ought to testify in his behalf. Since the 12th of July I have often heard him declare himself a Republican, and I can prove that he refused a place offered him as tutor of the Dauphin-against my advice, it is true. I can bring forward

'They will not listen to you. Write, send word; but do not go yourself." She looked at him beseechingly.

"Do not try and discourage Maurice. If you only knew how frightened I am in such a crowd and how hard it is to do my duty! I am trembling now, and I only go because I must." "You ask me, Delphine, to take you to certain death.'

"If you really love me Maurice, you would not have me cowardly." "But it is so useless."

"It is never useless to do our duty. I have been perfectly frank in acknowledging my weakness; but what would you truly think of me if I should follow your advice, turn now and go back to my house at Autenil?"

"Come theu," said Maurice. She took his arm and they walked along the quay, talking in a low tone of the old friend whose courage had brought him before the bloody tribunal.

"He was hiding," said Madame d'Athis, "at Macame d'Aubry's, my lacewoman's and he was perfectly safe there; but he insisted on leaving, because he had reason to think that his stay was endangering his benefactress. He succeeded in reaching Sevres in safety, but te was recognized in a wineshop by some Jacobins, brought back to Paris, and now he is in the Conciergeric awaiting his trial. It will go hard with him." "Thank you, Delphine, for sending to

"Who but the man I love, Maurice,

should share my danger?" As they turned the corner of the large square clock-tower that abuts on the jusy, they saw a crowd of armed men, umultuously swaying to and fro before the iron gateway of the Palace of Jus-Delphine quickly withdrew her

hand from Maurice's arm. "Keep me in sight," she said, "My courage will fail me if I do not feel that you are looking at me all the time, but it is best that we should not seem to be together. I had better appear to be quite alone; for I have an instinctive feeling that I shall be safer if these crea-

tures think me entirely unprotected," He yielded to her imperious sweetness stooped outside the gate, and then enteres, following at a distance the woman now threading her way through the brandished pikes and sabres. The wide staircase was crowded with a rabble in subots, carmagnoles, and red caps, slaging, shouting, and surging to and trances to the different Revolutionary tribunals, loudly urging summary proceedings and a general massacre, acusing the authorities of lukewarmness leniency towards the guilty. Newspaper venders came and went, crying: "Here you have the list of the lucky numbers in the lottery of the holy raillotine! Buy the treason of Joseph Lefebvre, former physician of the infamous Capet. Buy the account of the dreadful conspiracy of the traitor Le all good patriots."

Delphine made her way through the crowd. She was roing upsatirs when she was brought to a stand by a a man dressed in a carmagnole, a self-appointed sentinel. "Where are you going, citi-

"I am going, citizen, to attend the trial of Joseph Lefebvre; I am a wit-

He made no objection, and she was moving on when a hideous woman, with a baby in her arms, protested, declaring that aristocrats ought to be kept away from the tribunals, where they only went to corrupt the judges. She, for instance, that woman, would go and show her face, and veep and faint away and turn the heads of all those men inside. Such creatures know perfectly well what they were about, and that was the way justice was cheated and traitors escaped who let people die of statvation. But Delphine hurried on to the room where she heard the clerk of court reading the summons of Joseph Lefebvre.

Protected by his dress, Despies fol-lowed her unmolested. But the woman's railing had enflamed vindictive hatred, and on all sides cries arose of, "Marat has gone. We have lost our best friend. Since he was killed the aristocrats are raising their heads. Down with the aristocrats! Death to the conspirators! To the guillotine wish the enemies of the people! Death to false witnesses! Down with the sorceresses, the fine ladies!"

The indictment against Joseph Lefe byre was read, the interrogatory was over —the witnesses were to be heard. Every moment some one coming out of the court-room gave to the crowd outside a distorted account of some incident connected with the trial. Among other things it was asserted that it was proved beyond a doubt that the infamous Doctor Lefebvre had constantly administered poison, instead of medicine, to his poor patients. And when it was reported that woman had testified in favor of the accused, the tumult reached its climax and there were shouts of: "She is his accom-Send her to the guillotine with Then there were interminable disputes, shameful exhibitions of brutal ignorance and fiendish cruelty.

The hours wore away and the popular impatience grew more uncontrollable, kept at fever height by occasional runors of a possible acquittal. The cries, "Death to all false witnesses!" grew louder and louder. The September butchers, massed on the stairs, were talking of breaking down the door, when it opened and Delphine appeared. At the sight of the furious, threatening mob, she paused for a moment, proudly erect, but very pale. Maurice, who had followed her closely, pressed to her side as she stood there encircled by the bare, brawny arms, the clenched fists, and uplifted sabres of these bloodthirsty men, but she restrained him by an almost imperceptible motion of her head. The threats redoubled. The women's shrill cries rose fiercely above the drunken yells of some of the men. The most frighful of all these women, the same ccenture, with a child in her arms, who had kept the crowd in a state of continual excitement for hours, now pressed many instances of his patriotism that forward, and shaking her fist in Dellady, you have got to bleed for it!"

Then a half-naked, hairy-breasted giant pushed the woman aside and seemed about to strike. d'Athis bit her lips to bring back the obbing blood, and conscious that her lofty aspect of virginal purity and calmness was her only protection-that the terrified shrinking of a predestined victim would be instantly fatal-she cast her eyes about her and remarked the hideous mother who stood there still in a threatening attitude. Advancing to-

ward her, she simply said : "You have a beautiful Shild "

she had ever heard, the mother's heart was touched. Tears came to her eyes. the baby out to Delphine, who took him in her arms and walked down the stairs unharmed, smiling in the child's face, while the crowd, hesitating, subdued, taken by surprise, made way for her to pass. She walked thus across the court with her innocent protector and was safe. Outside the gate she gave the baby to its mother. Neither uttered a word but a tear fell on the child as she handed

him back. both took shelter in the carriage waiting for them at the clock-tower. Turning away, the wheels of their hack came in contact with the rough cart driving up to take Joseph Lefebvre to the scaffold

TEXAN'S THRILDING ADVEN-TURE AT A NOTED SPRING.

tion of a Coiled Rattlesnake in the

wouldn't lose any time in getting down into Texas," said J. T. Barnett, of El Paso County, to a New York Sun man. "When I see the rattlesnake they brag

about up North here I am amazed, for the biggest one I've seen yet seems dwarfish and lamblike compared with the interesting Texan rattler, especially the bloated rattler of the Staked Plains. I made my first acquaintance with the ordinary rattlesnake of Texas at the time the route of the Texas Pacific Railroad was being located through El Paso County. I was along with the engineer corps, and one Sunday I strolled out in the direction of the Sierra del Diablo, whose gleamy peaks and rocky front were apparently not more than a rifle shot distant, so clean cut did they stand out against the sky, but they were ten miles from camp. But the hills were not the attraction of my tramp. Some-where between the foothills of the Sierra del Diablo and camp was a famous spring, called Rattlesnake Spring, at which, according to the tradition of the Indians, two big rattlesnakes were constantly on guard. The water of the spring was alleged to have great medicinal properties, but it was death to any one who attempted to drink at the spring unless he first killed the two rattlesnakes, for the instant he stooped to quaff the waters one or both of the deadly serpents would strike him and sink their poison fangs into him, thus putting him out of the way of all future trials, tribulation and trouble. That a rancher had once been found lying dead with his face at the surface of the spring, where he had lain down with the evident purpose of quenching his thirst, two purple incisions in his temple and his bloated body showing beyond a question that he had been struck by a rattlesnake while lying in that position. was a well authenticated story in that part of Texas, and the snake that had doubtless bitten him was killed in the of the history and geography of the new rocks at the edge of the spring by the world, pointed out the real culprit, and person who discovered its victim. Still showed beyond question that the name I had my doubts that any of these venomous reptiles habitually lay in wait Latin treatise on cosmography, written there for thirsty roamers, and the pur- by one Martin Waldseemuller, and pub-

that water was under the guardianship hadn't been so terribly thirsty, I believe I would have come away without risking a drink, all the same; but as it was ren plain that lay between me and camp without quenching my burning thirst was not to be thought of, and I prepared to lie down on the rock at one side of the spring, just where they had found the dead and swollen ranchman, I suppose, and quench my thirst. I had bent

silage as a stock-feeding article was not long since accomplished in the United Water-A Close Shave. 66 EEMS to me, if I was going States is a matter of surprise, consider ing the fact that the system has been in to make a curious and varied collection of snakes, venomvogue in nearly all European countries ous and non-venomous, I

for years. About fifteen years ago the discovery was made by August Goffart, of Burton France, that placing corn fodder in a air-tight cellar or silo, it could be so preserved as to retain all its rich sue culent juices, and possess a feeding value for stock superior to any other winter forage. Goffart's first successful silo was established in 1873, and though many modifications have since been made in the construction of silos, the method in use at present is identical with the first plant erected.

In 1879, Francis Morris, of Maryland, built the first silo in this country. eneral use of ensilage was, however, long retarded, first, because of the ap parently heavy expense attending the construction of silos; and next, owing to the inability to secure the proper machinery for preparing the fodder for the silo. After many unfortunate and discouraging experiences, this difficulty has been solved, and ensilage has already become a standard product with a majority of the intelligent dairymen and stockraisers in the country. Of late years farmers' institutes have given the subject much consideration, and the establishment of silos have been generally recommended.

Manufacture of Ensilage.

That the extensive introduction of en-

In the State of Wisconsin the use of silage has become especially popular, and here, too, have been built the largest establishments for the production of machinery. Those who have investigated the subject thoroughly say that the doption of the silo means better kept stock; an increase of at least fifty per cent, in the winter product of the dairy, and the wintering of all kinds of stock in our northwestern climate for about one-half of the cost of feeding under the ordinary method .- Chicago Graphic.

Where And When America Originated. It was not until 1837 that Alexander von Humbolt, in his critical examination "America" was first suggested in a small pose of my trip that Sunday was to in-vestigate the matter. I went alone, be-a village situated in the upper valley of cause no one would go with me. I the river Meurthe, in southeastern Lorfound the spring. It was four miles raine, This little book was entitled from the foothills in a rocky basin, and Cosmographiae Introductio—Introducit came up from the white sand in cool tion to Cosmography-and the story of and tempting volume. I saw no sign of its authorship and publication, and the the presence of rattlesnakes, although unforseen part that it played in christenthe surroundings looked snaky enough, ing the Western hemisphere, forms one and no mistake. I was hot and thirsty, of the most curious narratives in the and after a close and careful scrutiny whole record of bibliography. Whether of all the rocks and scrubby bushes Humboldt made this interesting discovabout the spring I was satisfied that if ery by mere accident of research, or was led to it by Foscarini or Bandini-who of rattlesnakes they must have gone off in two successive editions of Solinus had duty for that day at least. Still, if I noted the suggestive passage in the Cosmographiae, without apparently comprehending its real importance-cannot now be ascertained. However this may a tramp of six miles back over the bar- have been, it was the author of Cosmos who first took up seriously the task of vindicating the long-maligned Florentine, and in so doing threw into the arena a topic in the discussion of which bibliographers have ransacked libraries, labored and disputed, until the whole line of evidence has been developed, army face so close to the water that I ranged, and the demonstration made could see myself and everything about complete. A publication which in the me reflected in the crystal depths as dim early twilight of American history made the little hamlet of Saint Die the It is, beyond question, well for me that godmother of our mighty continent is an object of no ordinary interest to Amerivivid, for I paused a moment to gaze in- cans, and this fourth centenary of to the water at the remarkable mirror- Columbus's discovery would seem to be ing. Suddenly something that I at first a fitting moment in which to bring tothought was the reflection of a nodding gether in simple narrative form the substance of what is known concerning the Cosmographiae itself, the men by whom back and forth midway between the it was written and published, the place glassy surface and white bottom of the where they lived, and the motive by spring; but as I gazed my heat turned to which their work was inspired .-

Insects generally breath through special pores in various parts of their body, and if these pores are closed by oit, they are suffocated. Any one may test this by dropping sweet oil on the thorax or back of a wasp; it very soon dies. this reason oil has been found one of the best things to use for the destruction of insects.

The stratified masses of the earth's crust, where most fully developed, attain a united thickness of not less than 100,000 feet. If they were all laid down at the most rapid recorded rate of denudation they would require a period of 73,000,000 years for their completion. If they were laid down at the slowest rate they would demand a period of not less than 680,000,000.

A few years ago five foot drivers were considered large on locomotives, but in this age of advanced railroading they have increased to seven feet in diamete Probably the largest diameter wheels in use in this country is that on engine 903 of the New York Central's passenger series that is one of the machin the Empire State Express. They measure seven feet three inches, while the next largest is six feet six inches on another engine in the same service.

French chemists have demonstrated that it is possible to produce heat without fire, and the discovery is to be utilized on the railways and street cars of the country. The device consists simply of a block of acetate of soda, which is plunged into hot water. As it solidifies after the immersion it gives forth as much heat as a coal fire for the space of live or six hours. There is no danger of fire from the use of the substance, and as the same fuel can be used a score of times its cheapness will be of great recommendation with many managers of

# The Story of a Picture.

The death of John Graves, a London print dealer, may recall to some the picture entitled "Can't You Talk!" history of its production, as told by Mr. Graves under the shade of the historic mound at Waterloo, is interesting. Seeing one of his children playing with a pet collie dog one day, the idea occurred him that the subject would make a charming picture, and he gave a commission to an artist to carry out his idea. The price was one thousand dollars, and the picture was exhibited at the Royal Academy's exhibition, where it attracted the notice of the Prince and that Princess of Wales, who expressed a desire to purchase it. Mr. Graves, who had placed on it what he considered the prohibitory price of \$5000, informed the Prince that as he had had the picture painted solely for the purpose of engraving, he did not wish to dispose of t; but the Prince granted gratiously the engraving rights and became its purchaser. Up to the present time reproluctions of the picture have netted more than \$120,000. Near the field of Waterloo Mr. Graves purchased an estate several years ago, and he was almost a monomanic on the subject of that decisive battle. He confined his reading exclusively to it, and he possessed a singular collection of books that had reference to it .- Boston Transcript.

Hatching Cateroillars in Pill Boxes. E. B. Boulton, fascinated the Biology Section of the British Association with the results of his experiments on catera pillers hatching in pill boxes. The pepper moth was the particular insect which be experimented on, and his experiments show that if you take an egg of one of these and grow it in a gilded pill box you get a golden enterpiller. Again, if he pill box be black, so is the cutersiliar; while a mixed cuvironment proiuced a muddled creature, just as in can the environment of the slum or the palace pretty much determines a person's characteristics .- Scientific American.
