This test should be used always before sending milk to the factory, all. There are a few plants, like panales though perhaps it is not so important primulas and cornelias, that like the shade and thrive in northern light, and a northwhen the milk is peddled on a route, though this colostrum tends to save the ern window is useful to place blooming plants in from time to time, thus promilk in warm weather .- American Dairy-

APPLE BUTTER FOR MARKET.

Why do not farmers who have large ounts of apples that do not pay for drawing long distances to market try the plan of turning some of the surplus into apple butter? It requires considerable labor, as it is a branch of manufacture; day. A higher temperature is only needed by somi-tropical flowers. but the farmer who has invested labor in this way is surer to get pay for it it is neglect of this fact that is one of than he is for most of his work on the farm. As far as possible the farmer should put the product of his farm in in the evening if the gas in the room is the form where it will bring him most money, and if he thereby turns his farm at some seasons into a factory he may be none the less prosperous.—New York Herald.

AN ELECTRIC INCUBATOR.

A novelty in the hatching of eggs has appeared in the shape of an electric incubator. The special feature of this machine is that the heat of the egg drawer is automatically regulated to the fiftieth part of a degree Fahrenheit. It consists of a tank incubator, heated by radiation from the bottom of a water tank, which is constructed on the multitubular system. When the egg drawer reaches the temperature of 104 degrees should also be shielded from the dust Fabrenheit an electric thermostat connects a dry battery with an electro-magnet which actuates a damper, allowing the heat to escape through the open air instead of passing through the flues of the water tank. This entirely automat-ic device is said to effect a saving of thirty per cent. in the fuel used for heat-ing.—Boston Trauscript.

COWS IN WINTER.

and exhaling oxygen is taken from them. Showering plants over a tub or sink is a Feed to a considerable extent detergood way to remove dust, but hold the mines the quality and quantity of the milk and butter. It does not pay to plant sidewise, so both sides of the leaves will be reached by the water. Large plants which cannot be easily keep a cow on half rations and hardly moved should have their leaves washed get a good milking at any time during the winter. In most cases both the milk and butter are of more value during the gently with a sponge on both sides .-Boston Globe.

winter than at any other time, and generally enough more to make it worth while to give the cows good treatment during the winter. They must be fed enough to live, at least, and they ought to have enough to keep them thrifty, as there is no advantage in letting them run down during the winter and then be obliged to take the best part of the spring to make up what has been lost. A little additional feed will not only keep them thrifty, but in many cases insure a good flow of milk, and this implies a profit rather than a loss, as is so

often the case when the cows are fed on

HOUSEHOLD AFFAIRS.

NAKE BREAD DURING DATLIGHT. All kinds of raised bread or cake rise such quicker in a kitchen in the day when the kitchen is warm, than at night, when the fire is out. Therefore five or six hours in the day are equal to twelve hours at night. In cold weather anything made with yeast should be made early in the evening, that it may get started to rise before the kitchen is cold. Some housekcepers keep a piece of an old ironing blanket, kept clean, to

fold and lay over the cotton or linen bread cloth, to keep the bread warm while rising.—Boston Cultivator.

TO PRESERVE PEPPERS.

Take a mixture of red, green and yelow peppers, cut off the tops and remove he seeds, throw them into brine sufficleatly strong enough to float an egg, and stand aside for twenty-four hours; then drain and wash them, put the pepthen drain and wash them, put the pep-pers carefully into stone jars, sprinkle a layer of salt over each layer of peppers. When the jar is full put two or three cabbage leaves over the top, then a small saucer to keep them in the brine; stand in the cellar until needed. The der before new sich to use them takes longing the short life of the sprays of The best success in indoor plant growth fifty to sixty degrees at night and from sixty to seventy-five degrees during the day before you wish to use them take a sufficient number from the brine and soak them over night in cold water. ture in the night, but also darkness, and They may then be stuffed with a mixture of meat and rice or rice and tomatoes

Certainly the hardest working woman

in the house should have at night as comfortable a bed as anyone, but very often this is not the case even in luxget sensitive, and are liable to suffer if urious houses, a springless cot being there is a sudden fall in temperature, thought good enough for the girl's room. Though in a city home, the room of the maid-of-all-work is a small but if they are given plenty of fresh air daily, unless the day is very inclement, hall bedroom on the top floor. This may still be neat, even fine in its applants in winter weather, but rather let pointments, with dainty spreads, con-venient toilet articles and a whole lookthe fresh air filter in more gradually ing-glass. There should be a bureau of Plants in windows should be turned some description, with a draw reserved once or twice a week. A fine form, for her towels and bed linen, so that she need not call on the mistress for these things common enough in the rest of the chambers, but luxuries here. A which arises in sweeping and dusting very good way to appreciate a girl's weariness by those who seem never to

dream that she can get tired, is to try some day to take her place. After get-ting thoroughly tired out with half the work undone, the mistress begins to understand what day after day of domestic toil means. When on Tuesday an ambitious girl is hurrying to complete a large ironing in one day, it is hardly fair to call on her repeatedly to do something else, as often happens when there is only one servant,-Detroit Free Press.

CHEMISTRY OF THE BAKED POTATO.

Usually the first vegetable prescribed by the physician for the sick person who is beginning to use solids is a baked potato. A baked potato, however, may be no better than a boiled unless it be Hens will not lay when shivering with done in so high a temperature that the starch is affected. Boiled potatoes cannot be subjected to a higher temperature than 212 degrees Fahrenheit. Baked potatoes may be done in such Dispose of any old hens you do not a way that they are little better than boiled-for instance, done in a slow oven. On the other hand, if they are The size of the sheep should be gaged put into a temperature of 380 or 490 Cornmeal and brau with milk is a degrees Fahrenheit, or what is calle I a "hot oven" they will be done in such a manner that the conversion of starch will in a degree take place and the potato be consequently palatable and easily digested. Potatoes roasted in hot embers are delicious and for the same rea-son. The high degree of heat cooks

the starch properly, but it must not be understood that by cooking potatoes in a high temperature the starch which they contain is all changed into dextrine. This does not usually take place except in slight degree; however, by the high temperature it is better prepared for this change in the processes of digestion. Probably what does take place is a sort of hydration of the starch, resulting in the complete swelling and final bursting of the granules. Just at the moment when this takes place the potatoes are done and should be imme-diately taken from the fire and served at once.-St. Louis Republic.

The Ho, s'ead.

It has been suggested that as skins and hides formerly did duty as bottles and womels for carrying wine and other liquors, the hogshead or hogshide was originally a barrel of the same capacity as a liquor containing vessel made of the skin or hide of a hog. Others think it may have been "oxbide" from which the word was derived. As the Dutch and Scandinavians called this kind of a cask by some equivalent of oxhide, there is some probability that this may be the true origin of the word .- House Fur-
