An advocate of electrical cooking claims that of every 100 tons of coal used in a cooking stove ninety-six tons go to wante.

The Atlanta Constitution figures that Massachusetts produced 89,662 poems last year, New York, 49,827, and the country at large, 2,888,954.

It appears that the detailing of officers of the army as instructors in colleges is growing in popularity both with the educational institutions and with Congress.

One hundred domestic servants are killed annually in England in the process of window cleaning. An invention recently patented is a window of which the outside may be cleaned without exposing the cleaner to any chance of a tumble.

Dr. Bertillon, author of the French system for the identification of criminals, says that, as a matter of fact, it is impossible among 100,000 individuals to find two persons with ears exactly alike, except in the case of twin brothers. This is one of the reasons why he was able to start a new era in police science.

Robert Moore, a Water Works Commissioner of St. Louis, made some remarks at the recent meeting of the Engineers' Club of Kansas City, which deserve more than passing attention from the commercial men of New Orleans. He said: "You ask me to talk on Missouri River navigation. It reminds. me very forcibly of the chapter on snakes in Ireland. There is no Missouri River navigation, and consequently I know you will excuse me from expressing my views on the subject." He added that the freight traffic on the Southern railroads was making river navigation even on the Mississippi almost a lost art.

The polyglot character of the Austrian army was abundantly shown the other day when the ancient custom of solemnly swearing in the recruits in the presence of the troops was revived, after having been discontinued since 1868. In Vienna alone the formula of oath to the colors had to be administered and read out in nine languages, to wit: German, Hungarian, Croatian, Bohemian, Polish, Ruthenian, Roumanian, Servian and Turkish, while the religious part of the ceremony was conducted by Roman Catholic, Greek Catholic and Greek orthodox priests, Protestant pastors, Hobrew rabbis and Mahometan ulema.

In answer to a recent inquiry made of the Secretary of the Interior by the Commissioner of Education in regard to a division of the fund to agri. cultural colleges in the South, the Secretary has decided that the division of the fund as already or hereafter to be made by the various State legislatures shall be approved by the depart ment, unless it is apparent that such suggested division is grossly inequitable and that in cases where the State legislatures have not yet proposed an equitable apportionment that the basis of division now in force shall remain till the legislative intent regarding the matter is made known. In the case of South Carolina the act of Congress of July 26th, 1892, applies not only to the sum due the State at the time, but to all sums becoming due under the act of August 30th, 1890.

A Washington letter says: Surprising news has reached the bureau of ethnology respecting the recent disentombment of the conque in Peru. It seems the corpse ex-hibits certain abnormaties which are in Peru. It seems thu extremely interesting from the point of view of anthropologists. The skull reveals all the marks of the criminal type, as recognized by science to-day. As shown by it the military hero, so worshiped and revered even now in South America, was a murderous and bloodthirsty brute. The cranium has even the so-called "fossa of Lombroso," which modern criminologists have never discovered except in confirmed and habitual enemies of society. The skull is abnormally broad. Another anatomical peculiarity is the instep, which is extraordinarily high. The latter was a feature of his couquering race. It recalls the warrior indefatigable on the march, whether on the desert tracts of the coast, or in the wilds of the Peruvian Cordilleras. As to his age, reliable evidence is to the effect that Pizarro was a little more than seventy years old when he

DAN'S DISCONTENT.

don't know what's come over Dan,' said Mrs. Dawson. as she placed the steaming coffee-pot on the Sunday breakfast-t a b l e. "He was always the brightest and best-tempered of my children, and downhearted and

discontented that I skeercely know him. He hain't seemed to take any interest in his work lately, and now's talking about goin' to sea, or 'listing in the

stay a year longer at the 'Cademy school." "If Dan wants to go, mother," said

Maria, a bright-looking girl of twenty, don't know himself what he wants. Let him go, and my word for it, in six months he'll be glad to get back and have a fatted turkey killed for him, since we don't raise calves. And Maria laughed, as she went to

call Dan to breakfast.

Dan, meantime, was leaning over the front gate, gazing absently down the

straw, he turned round, facing the look so bright and cheerful. house, and, with his hands in his pockets, looked moodily about him.

house, with its deep vine-shaded porch; and was introduced to Dora. there was the well of delicious cool water, under the big elm tree, and the and gave him her hand, and as Dan produced from the use of plant juices row of bee-hives by the garden fence, and the little orchard in the rear.

A pleasant picture it made to the eye of the passers-by, and it had always seemed pleasant to Dan until this unaccountable mood of discontent had come over him, and made him restless

He tried to persuade himself that his him, and that he could do better out

in the world. Teddy away at school, he would have

And just here it was that Maria raised the window and called; "Dan, breakfast ready!"

Her light, careless tone irritated She knew that he was not in good spirits, and yet never seemed to have any sympathy with him. So he took no notice of the sum

mons, and presently she called again: "Dan, are you coming, or must gers as they split the crisp pods and mother and I keep the breakfast warm dropped the little, shining green balls

and wait for you?"
"Bother!" he muttered, in reply, Yet he walked slowly to the house, and when his mother had said grace, took his place at the foot of the little

"You don't seem to relish your breakfast, Dan," Mrs. Dawson said. "I thought you'd like the fresh eggs and new potatoes, and the cakes you're so fond of.

"It's a good breakfast, mother, but I haven't got much of an appetite."
"Aren't you well, Dan!" she inquired, anxiously.

"Not particularly, mother, I think. There's a queer, all-gonish sort of feeling, a kind of emptiness and faintness, and-I can't exactly describe it, but it appetite. I've been thinking that from Cousin Lydia herself that, tonic medicine.

Martha laughed heartlessly. 'That's all your imagination, Dan. You know you never had a day's sickness in your life, and you look stout and strong enough to knock down an ox. I guess It's only that you're in love with somebody-Matilda Price, maybe, or Sophy Howells. Which is

Dan received this suggestion with supreme contempt. He made a boast having never been in love, and though the girls mentioned by his sister were the helles of the neighborbood, and had each tried the power of her charms upon him, he had remained carnest about going. I felt somehow obdurately indifferent toward them.

and Sophia vain and affected, and it I needed a change of some sort. But would take a very nice girl indeed to I'm getting over it now.

'It's 'most time to get ready for church, ain't it, Dan?" said Martha, home for the hard life of a sailor or glancing at the clock on the chimney shelf. "Matilda "It have on her new "Do you think it pleasant?" he shelf. "Matilda 'll have on her new bonnet to-day. I tell you she'll be asked, with a sudden light of interest

"Stuff! I'm not going to church."
"Why, Dan'el!" said his mother,

reproachfully.
"What's the use, mother? Just to see old Deacon Ball asleep, and hear Miss Beckey Jones screeching the hymn out of tune, and listen to Parson Tanner's tiresome-

"Dan'el!" interrupted his mother,

"Well, mother, I'm tired of it all. I believe I'll go over to Radway and see Bill Brewster. He's going on a voyage next week—bound for the West about wanting a tonic, and I've spoken I haven't made up my mind yet about | She says you're needing quinine and the army-recruiting business that the calomel, or gentian."

starting to her eyes. Dan was very fond of his mother, and it went to his heart to see her in not takin' an interest in anything-

"I don't say that I'll go mother, so long as you oppose it. But I wish you'd

"Do let him go, mother!" said wanted—that's all.'
Maris, sharply. "It will likely do him And as he hasti

It was late that evening when Dan, who had spent the day at Radway, came home to supper. He noticed that the parlor windows were lighted; but that was always the case on Sunday, child?" when Maria's beaux were calling on

As he stepped into the kitchen entry he was greeted with a savory odor of pies and cake, and saw that the table was nicely set with the best moss rosebud tea set. Maria, who had heard garden there-how happy they both his step, came to meet him.

"Oh, Dan, I wanted to tell you! We've got company arrived—mother's cousin Lydia and her daughter Dora. They've been visiting Uncle Erasmus, in Huttonville; and to-day he's brought them over to spend some days with us. "I don't know what we'd do without I hope they'll stay longer, for they're Dan'l," added the mother, with tears in her eyes, "and Teddy wanting to and brush yourself up, for supper'll be ready in a minute.

"Bother! I won't go in to supper. They needn't know that I'm here. anything more to vex mother. She's "why, let him go. He's got no cause anything more to vex mother. She's to be discontented, and I believe he worried enough about you already; and I've left her in the parlor with Cousin Lydia to talk over old times; and Dora's helping me to get supper. She's the nicest girl!"

Maria disappeared; and Dan, as he stood hesitating, had a view into the neat kitchen.

There he saw a slender and very kind relations. He did not know why as she laughingly replied to some refied, and as he stood there, chewing a he had never before seen the kitchen

> Deepest Metal Mine in the World, The United States has now, we be lieve, the deepest metal mine in the world. For some time that claim has been made for the Maria shaft, at the mines of Przibram, in Austria, which was 3675 feet below the surface at the time of the great fire in 1892; and nothing, we believe, has been done upon it since that time. It has now en surpassed in depth by the No. 3 shaft of the Tamarack Copper Mining Company, in Michigan, which on De-cember 1st was 3640 feet deep, and is now more than 3700 feet, the average rate of sinking being about seventy-five feet a month. This makes it beyond question the deepest metal mine in existence, and only one other shaft has reached a greater depth, that of a coal mine in Belgium, for which 3900 feet is claimed. - Engineering and Min-

An Almost Unknown Country. Lower California, which somebody periodically threatens to purchase and bring under the territorial dominion of the United States, is the longest of North American peninsulas. It is of about the same area as Florida. Its greatest length is about 800 miles, and its greatest width about 156 miles. The whole peninsula is subtropical in climate and productions, and its extreme southern end is just within the torrid zone. The coast line on gull and ocean is about 1700 miles in length. The population is sparse, and veloped that it is one of the most remote regions in the civilized world, mother, wouldn't it? She would miss The gulf ports are almost unknown to the people of this country. - San Fran-

THE "BARREN GROUNDS" OF CAN-ADA SWARM WITH GA ...

Twenty Acres Covered With the Animals Standing Thickly Together -A Veritable Hunters' Paradise. B. TYRELL, of the Geological

Survey, and his party, says an Ottawa correspondent of the New York World, tell marvelous stories about the game they say on their recent journey through the great "barren grounds" of Canada's Northwest. No one dreamed that Canada possessed such immense herds of deer as were seen by Mr. Tyrell's

party.
"The sight at times was marvelous," said Mr. Tyrell. "When we reached the edge of the woods north of Lake Arthabasca, in about the beginning of August, we commenced to meet a few deer every day. One evening, just after going into camp, a deer was seen standing on a little island not very far away, and my brother went over and shot it. It was very poor in flesh; nevertheless we found it made pretty good meat. On the following day, as we were paddling along a moderately large lake, one of my half b.ceds drew my attention to what he thought to be the earth moving some distance away, and on looking through my glass I saw that it was an immense herd of reindeer. We equipped ourselves with firearms, paddled ashore and walked toward them. There were thousands in the herd. They were in bands of two or three hundred each, and crowded as close as possible together. It was presumed they did so in order to partially escape the torture of the black flies. Walking in between a couple of bands we opened fire, and they stampeded in every direction. One of the party was obliged to take refuge behind some heavy brush to prevent the deer from tramp ling upon him. We killed about seventy of them. Many were too poor for us, but the fatter ones furnished rich, juicy meat. The choice meat of each

about twelve pounds. "After remaining there two or three days, during which we were engaged drying the meat, we started taking photographs. We could walk right into the midst of the deer. As we did so they would push a little way to each side to allow us to pass, and then close up the ranks immediately behind us. The sight was amazing. There we stood, surrounded on every side by the deer, swaying their long, slender horns to and fro. As far as we could see there were countless herds, covering about twenty acres each, and standing as thick as they

deer, when dried, would average only

could mass together.
"As we proceeded further north herds were constantly met with grazing on the sides of the hills. weather was something like that of November here, but the ground was always wet. In the summer the deer live on grass and in the winter chiefly on moss. After the month of August we shot very few, the old ones we saw being wild and almost unapproachable. In the fall and winter they make their way to the edge of the woods in order to get shelter from the fearful gales that blow over the barren ground.

"Those deer differ considerably from the ones in this part of the coun-They are about the height of try. They are about the neight the Virginia deer, but somewhat stonter and heavier; their horns are larger and more branching. They shed their coats in July, and at that time are often very rough in appearance and poor in flesh; but towards the end of August, when they get their new coats, they begin to pick up and fatten. Their skins are good and warm, but the hair, being brittle, breaks off and renders it valueless as

Apex of Frugality. A wealthy and very parsimonious person who recently died in England, and who was called a miser by his relations after his death, because he preferred public charities to them in his will, was fond of attending theatres, and on secount of his very great regard for his health always took his overcoat with him. But where should he leave this garment during the performance? The box-keepers would expect at least six pence; and, should he leave it at a coffee-house, he must spend three pence for house room for His invention supplied him with method cheaper and equally sceure. He pledged his garment, every evening that he attended the play, at a pawnbroker's near the theatre door for a shilling. This sum he carried back at the close of the play, added one penny to it for interest, and received his great-coat again safe and sound, as it had literally been laid up in lavender. -- New York Sun.

Where Machinery Fails.

Many attempts have been made to supplant the glass-blower by machinebut up to this time none have attained commercial importance. Either the cost of production has been found to be higher than by the timeonored method, or the work produced was not of a quality up to the demands of the market. This is more especially the case in the kinds of bottles used to contain effervescent drinks which must be capable of withstanding a pressure of several atmospheres with-This, in fact, is the critical point in

the automatic manufacture of bottles, since the difficulty has always been to obtain a distribution of the glass forming the walls of the bottle as uniform as in the hand work. The attempt has been made to press the body and bottom separately and to unite the two by fusing them together, but the bottles made in this manner were very heavy and of poor appearance. - China,

In water in which decaying vege tables have been infused the microscope discovers little animals so minute that ten thousand of them would not exceed in bulk a grain mustard. Yet these creatures are supplied with organs as complicated as those of a

It is believed that whales often attain the age of four hundred years. The number of years these huge creatures have lived is ascertained by counting the layers of liming forming the horny substance known as "whale These lamine increase yearly, just as the "growths" do on a tree.

The prevalence of crimson colors in certain fishes on the New England coast on portions of which scarlet and crimson seaweeds abound, is explained by Professor J. Brown Goode by the red pigment derived by the crusta-ceans from the seaweeds they devour, and which in turn form the food o the fishes.

A Tacoma (Wash.) man, George R. Cowls, is said to be the inventor of a process for making illuminating gas out of wood. From one cord of wood he gets gas and products worth \$48, so it is claimed. If this be true, then Washington State can use up all its long tree stumps in the manufacture of gas and get so much clear gain out

The thinnest part of a soap bubble is where the black, or rather gray, tint appears just before it breaks. This thickness has been calculated by the laws of optics to be less than one one hundred and fifty-six thousandth of an inch. From this minute amount the thickness of the bubble may increase up to quite a perceptible

quantity. Bricks are now being burnt by electricity. This promises to revolutionize the industry by greatly reducing the labor and cost. The kiln-drying p cess is entirely dispensed with. wet clay is put into a sort of covered iron mold, which holds about 1000 bricks, and a strong current of electricity is then turned on, and in very short time the bricks are dried and burnt and all ready to be turned

The Humming Bird at Home. While spending the winter in Cali-

fornia, writes Frank Ford, in the Magazine of Natural Science, I made my first acquaintance with Madam Hummingbird "at home." In the first place the location could not have been improved on. Just picture in your mind a lawn dotted with orange, lemon, fig and palm trees, with here and there a giant century plant, or bunch of pampas grass, and no end of flowers. While a cypress hedge, overshadowed by stately encalyptus and pepper trees, separated the lawn from the street. One day while gathering oranges, I was startled by the rapid and angry darting of a humming bird near my face, which led me to look closely in that part of the tree, which resulted after a little search in the discovery of my first humming bird's nest. It was placed on a twig not as large as a lead pencil, on one of the lower limbs of the orange tree, and it was so covered with lichens the same color as the bark of the tree that it was difficult to find it again even after I knew about where it was. The nest is about the size of the burr oak acorn cup, built almost entirely of the feathery plumes of the pampas grass, covered with green lichens, and all held together, and to the limb, with something greatly resembling spider web. Within this "marvel of construction" were two semi-transparent eggs, almost too small to describe, and my efforts to use the blowpipe on them blew them all to smithercens.

Before taking the nest, I visited Madam Hummingbird several times, and nearly always found her at home. She never left the nest but a few minutes at a time.

When Water Boils.

Water boils at different temperatures, according to the elevation above the sea level. In Baltimore, water boils practically at 212 degrees F.; at Munich, in Germany, at 2091 degrees; at the City of Mexico, in Mexico, at 200 degrees, and in the Himalayas, at an elevation of 18,000 feet above the level of the sea, at 180 degrees. These differences are caused by the varying pressure of the atmosphere at these points. In Baltimore the whole weight of air is to be overcome. In Mexico 7000 feet above the sea, there are 7000 feet less of atmosphere to be resisted, consequently less heat is required and boiling takes place at a lower temperature -- Boston Cultivator.

Charlie?" Charlie-"He is the head of our firm. "-Spere Moments. Nell-"How do you know she is ia love with Jack?" Belle-"Because she told me he was peerfectly horrid, wouldn't have anything to do with

him."-Philadelphia Record. Footman-"Say, Jeems, what would we do if we found a pocketbook with \$20,000 that the boss had left in the carriage?" Coachman - "Do? We wouldn't do nothing at all. We'd live

on our income."-Texas Siftings. Customer-"Why is it you charge as much for a six-pound pig as you do for a sixteen-pound pig?" Butcher-"The smaller the pig, mum, the worse it hurts us to kill it. Got to charge somethin' fur our feelin's, mum." Chicago Tribune.

Miss Seare-"Jack Marblehead gave ne a great reception yesterday. has a campon on his yacht and when I came on board he fired a salute of ever so many gaus-forty-nine, I think it was." Miss Smarte-"One for every year of your age, I suppose."-Vogue,
