The sugar palm of South America is a rival of the New England maple.

Australia has more places of public worship in proportion to population than any other country.

The peasants of Pergine, near Triente, are using electric light in their houses, as they can get it cheaper than kerosene.

There are more paste diamonds and artificial stones of all kinds made in Glasgow, Scotland, than in any other city in the world.

Whenever a murder is committed in Argentina it is customary to put every possible witness in prison and keep him there until the real culprit is convicted.

Of the 5,000,000 inhabitants of London more than 1,000,000 have to live on less than \$5 a week for each family, while more than 300,000 are in chronic poverty.

Mme. Blanc says that Bret Harle is, of all the American authors of the times, the most popular in France and that Howells is not generally liked by the French.

"Fugitive trains" was added to railroad nomenclature during the big strike. It applied, explains the Chicago Herald, to freights that started out for a certain destination not knowing whether they would "git there" or somewhere else.

It seems to the New York Advertiser as though in many ways the authorities of Great Britain were adopting American methods. The latest instance of this is shown in the investigation now progressing of the cruelties perpetrated upon prisoners confined at Dartmouth.

There is great consternation among the lovers of bull-fighting in Spain because Guerrita, the only remaining great fighter, has declared his unalterable decision to retire from the ring. The reason given is that he is worth over \$200,000 and that his wife suffers terrible anxiety every time he fights.

Most of the States have had a system of commutation for good behavior of prisoners. Massachusetts is just putting that kind of a ticket-of-leave law in force. The first subject for clemency is a man now in the thirties, a splendid specimen physically, who fourteen years ago was given an eighteen-year sentence for burglary. He has been a model prisoner and means to begin life anew.

E. B. Bolton, of the Royal Society, has been conducting some interesting experiments to show the effect of environment on animals. The pepper moth was the particular insect he studied. He found that if an egg was put into a pill box lined with gilt paper the caterpillar produced would be golden in color. When the box was black the caterpillar also became black. And lastly, when he mixed different colors the caterpillar became mottled.

Referring to the common statement that electricity is still in its infancy, Professor Dolbear recently said: "Electricity is not in its infancy. Despite what has been done there is nothing in the present use of electricity that has not been known for many years. Are lights were known eighty years ago; the telegraph is sixty years old, the telephone thirty, and the incandescent lamp ditto. We are not at work with new things or on new principles. If you are running a motor with electricity, it is not a new discovery in electricity to apply the same power to the operation of a fath or a street car."

Christian people who spend any length of time in Europe are often somewhat at a loss, avers the New York Independent, with regard to church attendance. In almost every important center there are Evangelical churches of various denominations; but they are not always widely known, and it is sometimes difficult to learn the full facts as to the provision for public worship. In Paris and Berlin the American chapels are well known. In Dresden where there is an English and American colony, chiefly American, of about 3000 people, comparatively few have known of the Presbyterian church, which is rather a union church under the care of the Rev. J. Davis Bowler, one of the most eloquent preachers on the Continent. The church has no distinctive church building, but meets in a hall, and earnestly calls for the support of all Christian Americans who spend a time in that city.

Almost one-twentieth of the population of the United States is widowed.

With the additions recently announced the number of members of the British House of Lords is 573.

Wheat, cotton, iron and many other things which are produced in vast quantities in the United States are at wonderfully low figures.

That Americans have a "sweet tooth" is shown to the New York Mail and Express by the fact that they consume 25,000 tons of candy a year.

If America were as densely populated as Europe it would contain as many people as there are in the world at the present time, estimates the Detroit Free Press.

According to a recent article in the Railroad Gazette the steam city railroads of London earn only \$73,000 a mile, while those of New York City earn \$300,000 a mile per annum.

There is a boy in Sing Sing (N. Y.) Prison who was sent up for six years and a half, for stealing \$1.50. It has just been discovered that he did not steal it, and there is talk of his demanding an indemnity from the State.

Cities in Norway do not grow quite so rapidly as some of those in the West, muses the New York Tribune. Tromso, in that country, has just celebrated its 1000th anniversary. In that time it has grown from sixty people to 6000! The inhabitants are chiefly devoted to fishing.

It looks to the New Orleans Picayune as though every country in the world would be added to the list of sugar producers and refiners. A number of Japanese merchants representing large capital propose starting a joint stock concern, and establishing works for refining between Hiogo and Osaka and also near Yokohama; and it is said have already taken steps to import the necessary machinery.

Of all cities of the world, Paris presents a gathering of humankind most fearfully mixed in its elements of disorder. The criminal brought up from childhood in the capital will risk his life for the privilege of living there. Accordingly, many criminals who have been forbidden residences in Paris, in spite of the strictest surveillance of the barriers, will work their way in again and take up their career of crime under other names.

Three streets in Paris are to be named after the authors, Edmond About, Guy de Maupassant and Octave Feuillet. Taine, the critic and historian; Brillat-Savarin, the epicure; Charcot, the great physician, and Fourier, the socialist philosopher, whose communistic colony in New Jersey half a century ago was a more interesting experiment, the Chicago Record thinks, than even the Brook Farm—all these are to have their names perpetuated in the new baptisms of streets that is taking place in Paris.

A Bengalee magistrate, having been informed of the whereabouts of a mad dog, armed himself and went to the place where the rabid animal lay by a house door. He learned upon inquiry that two women were in the house and sent word to them that he was about to shoot the dog and therefore they should not be alarmed by the report, and that, as he might not inflict a fatal wound at the first fire, and, in fact, might miss, they should remain within until notified. Such a supreme courtesy is in marked contrast with that of western civilization.

While Russia is behindhand in most things pertaining to progress and enlightenment, she is distinctly in advance of the remainder of the world as far as the regulation of the bicycle traffic is concerned. Before anyone is permitted to ride on any public thoroughfare he is compelled to obtain a license at a cost of a dollar, and to have his name and address entered upon the police registers of his district, in token whereof he is presented with a square piece of leather with his number in large figures of bright metal. This he must have permanently affixed to the back of the cycle, so that it may be seen by the police. But, prior to receiving the license, the knight of the wheel is forced to undergo an examination as to whether he can ride sufficiently well to avoid becoming a public danger. This examination consists in the description of a figure 8 set round two sticks, and he is obliged to do this to the satisfaction of the official examiners, one of whom is usually the president or vice-president of the local bicycle club.

IF I SHOULD GO.

If I should go away, And you no more should meet me like the May— I say, if I should go, Who long have lived and long have loved you so— Would you not feel some natural, sweet regret? Would you remember yet? If I should go away? And you should see the breaking of the day— Would you not still remember how I stood And saw the same sun lightning all the wood Where the pines waved? Where all the flowers are wet With sweetest dew? Would you remember yet? If I should go away— Sweetest there are no words for me to say! I cannot go and leave you! God would not have any violet of our love forgot! But, if His violets with no tears were wet, Would you—O, sweetest, love of mine, forget? —Frank L. Stanton, in Atlanta Constitution.

TARSEY'S TEMPTATION.

BY TOM F. MORGAN.

UNLESS there was a horse-trade or something of equal importance on hand, Lyman Tarsey was pretty sure to be found at the postoffice at matitime; not because he expected a letter, but because the postoffice was in a grocery store plentifully supplied with comfortable box, barrel and counter seats. It offered abundant opportunities for sly nibblings of crackers and cheese, and was the clearing-house for the gossip of the village.

When, one day, the postmaster really did hand Tarsey a letter, he was much surprised and examined it doubtfully. The envelope was addressed plainly enough, and bore the New York postmark. Who in the world could be writing him from New York?

Tarsey went to one side and opened the letter with mingled eagerness and doubt. Perhaps somebody had died and left him a fortune? Stranger things had been heard of. When he had gained a partial understanding of the contents, he hurriedly left the postoffice, his whole lazy body quivering with excitement.

Around the corner he paused, undecided where to go to examine his prize in secret. Then he slouched with unaccustomed energy out of the village into the woods, turning abruptly from the beaten path as soon as he was out of sight of any house, and keeping on till he felt sure he was in no danger of being seen.

He wormed his way into the midst of a thicket, and re-examined his prize. The contents of the envelope consisted of a neat circular, printed in imitation of the work of a type-writer, a strip purporting to be a clipping from a newspaper and a small slip bearing a name and address.

Tarsey read the circular carefully. It was couched in a strain well calculated to flatter the vanity and whet the greed of the reader. After stating that the writer was desirous of obtaining a shrewd man to handle his goods, which were nowhere mentioned as counterfeit money, but always "goods," the circular continued:

"You can make money faster and easier by dealing in my goods than you ever dreamed of before in your life. It was never intended that one man should have millions and another nothing. The wealth and good things of this world are too unevenly distributed.

"Unless you have money enough to live on comfortably for the rest of your life, this is just the business you should take hold of, as my goods can be handled with perfect safety and immense profits, and enable you to provide yourself with a competence for your old age and pass your remaining years in ease and comfort.

"There is no wrong about it—Uncle Sam has millions of our money locked up in the Treasury, uselessly and unjustly so."

So on went the letter to a considerable length, in a way shrewdly calculated to find the weak point of such a man as Lyman Tarsey. When he had finished reading the circular, he was gasping at the magnitude of the possibilities which seemed suddenly to have opened before him. His hand trembled as he turned hungrily to the printed slip that accompanied the circular.

It purported to be a newspaper clipping, setting forth that, in spite of the utmost vigilance of the officials, certain engraved plates had been stolen from the United States Treasury, from which notes—exactly the same as the genuine except that they did not have the sanction of the Government—were being printed by the thousands of dollars' worth. The following extract is a fair sample of the sophistry of the article:

"As the case stands these people in New York have everything their own way, for their shrewd work seems to be carried on in perfect safety, and there is not the slightest chance of detecting them or the people with whom they do business. It seems to be a positive fact that they are in possession of duplicate Treasury plates exactly the same as those used by the Government, and the paper is similar to that upon which the genuine notes are printed. It is a profound mystery how and from whence they obtain it. The greenbacks which the New York

seconders are dealing in are so fine and perfect that there is not one chance in ten thousand of detecting them, and all the detectives have failed to unearth the slightest clue to makers or users."

Lyman Tarsey had never been desperate or depraved. His sins had been chiefly of omission rather than of commission. He had never stolen aught except precious time, and the happiness and comfort of his wife and children.

He had always been one of those sanguine souls who are content to wait patiently for something to turn up, instead of rolling high their sleeves and turning up something for themselves.

In the old home State he had done fairly well, till finally he had conceived the belief that in Missouri was located the El Dorado where kindly nature returned a maximum of reward for a minimum of toil. Thither he had journeyed with his little flock, and purchased a run-down farm "on time."

The succeeding season was a poor one, and Tarsey's minimum of labor brought him so little of reward that he was unable to make the necessary payments on the farm, and in due time lost it.

The family presently found shelter in a shabby rented house in the outskirts of the village, and Lyman degenerated by degrees into a good-natured loafer, a trader of horses and catcher of fish—a worthless lumberer of the ground.

The "green goods" circular came to him like a revelation. It aroused his avarice and his long dormant ambition. He had never had his chance before, he told himself; but now his chance had come. The artful arguments seemed prepared especially to fit his case. They stilled his sluggish conscience and blinded his dull eyes.

"The wealth and good things of this world are too unevenly distributed. It was never intended that one man should have millions and another nothing."

The words met with Tarsey's unqualified indorsement. The appeal to his desire for comfort in his old age seemed like the plying words of a kind friend. True, it was counterfeited money. Was it?

Did not the newspaper clipping state that the notes were printed from genuine plates made by the Government? What mattered it to him if these plates had been stolen? It was no affair of his. Was not the money the same, whether printed with Uncle Sam's sanction or without it?

The Government had millions, billions for aught he knew, locked up in the Treasury vaults, of no use to anybody. Why should not he profit by Uncle Sam's carelessness? The tempter won.

The coming of dusk admonished him of the flight of time. He placed the precious documents carefully in his pocket. When he reached home the seamy appar was waiting for him.

"Poppy's tum! poppy's tum!" whooped the little white head two sizes larger than the baby that wore it.

There was always a baby in the Tarsey household. These children loved the shiftless, worthless father, who was always good-natured, and who whittled little toys for them, and was ever ready with a story.

He had no relish for the simple supper that night. The food half choked him. He noticed, he knew not why, that his wife's cough seemed worse than common, though in truth it had been growing worse for weeks unperceived by him. But the poor woman looked more cheerful to-night than was her wont.

She was not patching or mending this evening, but was nursing the feeble baby in idleness. Her thin cheeks were faintly flushed. The little white heads were happy and excited over something unusual. "Does what, poppy?" piped the head that was two sizes larger than the baby. "I'm to git all the fine washin' an' ironin' from the hotel," said Mrs. Tarsey, with almost a happy smile. "I can make 'most a dollar a day out of it."

AN ICE CREAM FACTORY.

MAKING THE COOLING COMPOUND BY MACHINERY.

Things That Are Mixed Up For It and How They Are Treated—Ice Cream Bricks.

ICE CREAM is manufactured from a combination of milk, pure cream and gelatine, flavored with different extracts, such as vanilla, lemon, strawberry, etc., the ingredients being first mixed up together and placed in circular metal vessels or runners which revolve around inside of circular wooden tubs, the runners being surrounded by a quantity of cracked ice and rock salt. Each runner is furnished with a beater having a number of blades which revolve around on the inside, beating up the material, the ice and rock salt causing it to thicken and form itself into ice cream. Some manufacturers use eggs, corn starch, etc., and boil the ingredients before freezing.

The first process is the mixing together of the ingredients. About ten quarts of pure cream, ten quarts of milk and about eight pounds of granulated sugar are first mixed together. If the ice cream is to be flavored with strawberry, about six to eight drops of pure red coloring and one-quarter pint of essence of strawberry are added. A quantity of gelatine dissolved in about a quart of warm water is then added to this, bringing the solution up to about twenty-four quarts in bulk. It is then run through a strainer or fine sieve into the runner.

The runners are made of copper, the inside of which is coated with tin, which, after about four weeks' constant running, has to be renewed, the coating of tin being worn off by the working of the beater. The runners are about twenty-three inches in height and about one foot in diameter, and hold about forty quarts. The wooden tubs in which they revolve are two feet four inches in height and are about twenty inches in diameter on the inside, leaving a space of about four inches for the ice around the runner. Attached to the top of the cover of the runner and perpendicular shaft of the beater, which revolves in a socket at the top of the grinding machine, are two gearing wheels, which are geared to another attached to the shafting of the machine. When the machine is in motion the beater, containing ten 1/2 inch iron blades, and the runner revolve around in different directions, making about fifty-five revolutions per minute. As soon as the machine is set in motion, a small quantity of ice and rock salt is added, which is renewed every few moments until the tub is filled, taking in all about twenty-five pounds of ice.

The beating operation takes about twenty minutes, the salt and ice gradually freezing the mixture, leaving a space of about four inches for the ice around the runner. The grinding operation is completed when the ice cream shows or adheres to the glass windows in the cover of the runner. The wooden tub with the runner of cream is then rolled to one side and another is put in its place to pass through the same operation. The ice cream is then taken from the runners and put into cans ranging from one to ten gallons each and packed into ice and rock salt for delivery, which is ready in about two or three hours' time.

The machine for breaking up ice consists of a revolving cylinder four-teen inches in diameter and twenty inches in length, riveted to which are nine conical-shaped wrought iron teeth about five inches in length, which, when the machine is in motion, pass between a number of other teeth connected to the framework of the machine. The cakes of ice, which weigh about fifty pounds each, are first broken into two pieces and placed in the machine. The teeth of the revolving cylinder, which makes about 120 revolutions per minute, crash through the ice, breaking it up into small pieces at the rate of a ton in every twenty minutes.

Ice cream bricks are made by packing the cream into metal forms. These forms have a top and bottom cover. The ice cream is first put into these brick shaped forms and a strip of paper placed between the cream and each cover, which holds them firmly in place, and then they are packed away in salt and ice and frozen for about three hours. They are then taken out and the forms dipped into a pail of warm water, which loosens the cream from the sides. The top and bottom covers, after being wiped with a cloth, are then taken off, the attendant allowing the loosened brick of cream to slip out of the form on to a strip of white paper immediately covering it, and placing it into a pasteboard box and packed in ice again for delivery.

Neapolitan bricks of ice cream are made by placing one layer of cream over another, such as vanilla, chocolate, ice cream, etc. A great many metal forms are made of composition of lead and zinc, representing animals, fruits, vegetables, etc., the ice cream being packed into the forms and frozen in the same manner as the bricks. Forty-quart cans of milk cost wholesale about \$1.12 per can, pure cream about seventeen cents per quart, and ice about \$3 per ton. Two machines, with three runners, can turn out from 1500 to 2000 quarts of ice cream per day.—New York News.

The Chinese Government levies a regular tax on beggars, and gives them, in return, the privilege of begging in a certain district.

The coldest place in the world is Yakutsk, Russia; the thermometer sometimes falls to seventy-three degrees below zero.

"Duties I put away." Duties I put away; My heart keeps holiday. I flee the fervent heat, And seek the cool retreat, Where I can see the blue And silver river flow, And green and distant woods— Sweet silent solitudes. Here all is calm; the grass Scarce rustles as I pass. One work; I hear his boon, In honey-suckle blooms. Go, brown bee, go away; I love not work to-day; But with white clouds above That rove, my thoughts would rove In random luxury, Through earth and air and sky. Even the birds are still, And the wind upon the hill, Seem through the tremulous air, All things look calm and fair; And I with them would cease For this delicious peace, Letting the world go by, With for it all an eye. —W. F. Barnard in the Chautauquan.
