A Missing Ring Story.

It would be difficult to find in the pages of fiction anything to equal the following prosaic fact, which has just happened in Scotland: A Captain Testheote rents a moor from year to year. Last year while out shooting he lost a dismond ring. This year he was reminded of it by the anniversary of his loss, and sitting by the fire and taking up a piece of peat to put on, he had scarcely uttered the words "It is a year to-day since I lost my diamond ring," than his companion was surprised to hear the words quickle followed by "and here it is." The ly followed by "and here it is." pest had been cut from the very moor where the loss had occurred, and hence its recovery. No other account of extraordinary recovery of diamonds could equal that, unless, perhaps, that of a lady who dropped s diamond into a pend and found it some months after on the leaf of s water lily which had borne it upward in its growth. - Leeds (England) Mer-

WALTER BAKER & CO.

BOLD BY GROCERS EVERYWHERE.

WALTER BAKER & CO. DORCHESTER, MASS.

This shrub needs coolness and shade. The bright, hot sun produces mildew, which stunts the growth. The bushes are, therefore, best grown in the shelter of some building and in cool, moist soil. Some native varieties are moderately free from this mildew, but American-grown berries will probably equal the fine ones grown in the cool English climste.—New York Times,

A DROUGHT-PROOF CROP.

Lucky is the farmer who in this year of droughts has planted some sorghum as a fodder crop. It is much botter to resist protracted drought on account of roots striking deeply into the soil, while corn is shallow rooted, and suffers whenever dry weather comes. At the West, where droughts are much more severe than here, sor-ghum is commonly planted for feeding. Its early growth is slow, but so soon as its roots strike down the stalks shoot upward, and two months after planting the sorghum will be larger and yield more tons per acre than will any kind of corn.—Boston Cultivator.

HOG CHOLERA.

Feeding hogs green cornfodder will not produce cholers, as an inquirer in-timates, says Professor J. H. Shep-perd of the North Dakota Agricultural College. That disease is caused by specific germs or micro-organisms which are in this case small plants. There are a great many kinds of disease germs, as well as germs that are beneficial in many ways. Most per-sons not acquainted with hog cholera call almost any swine disease by that name, and I feel sure that hops are in many cases thought to have cholera when in reality they do not. I have known of no serious results from judiciously feeding green corn fodder. Many tons are annually made use of in this manner. It is a succulent food, and a sudden change to an exclusive diet after feeding dry food might cause serious scouring of pigs. The change should be gradual. In cases of reported deaths from using this feed I would be inclined to think that a derangement of the digestive system was the cause and not cholera. It would diet exclusively, but given with a small quantity of dry corn or with bran and shorts I would not expect serious trouble.

cost of bad temper in the dairy? If allowed a rough guess at it, I would say that bad temper was the cause of more loss in the dairy than all other sources of loss put together. A man may have fine cows, a good stable, the best dairy implements and a good market, yet he is losing money all the time simply because he loses his temper when a cow gets contrary or acts in some way to irritate him. He then begins to swear and yell and act like Are you plowing about the same a general idiot. Now, a cow is a little swale that you were twenty od deal like a woman in one respect. years ago? You yell at her and she instantly loses her head. Her judgment is all gone and her nerves are on top. Now look out for a squall. Nature never meant that man should abuse the softer sex, at the remainder of the same safferer from Rheumatism. So much so that I could not at tend to my business and was confined to the house for weeks at a time. I was advised to try Hood's Sarsaparilla and have constantly improved since I commenced to take the modicine. She takes her revenge in a negative shape by not giving as much milk as she would have given had she been better treated. Not seeing his loss, the man does not appreciate how heavy it is until he given had she been better treated.

Not seeing his loss, the man does not provement in the horses produesd. appreciate how heavy it is until be comes to sum it up at the end of the season when he good naturedly to himself attributes his losses all to bad luck when it should be to fool temper .-- Home and Farm.

SMALL PLOCES OF POULTRY.

Farmers often keep too many hens in one place. Fifty is all that should be kept in one flock as the food will cost less, and more eggs will be laid in winter than if 100 are kept. The right way to do, where more than fifty fowls are to be kept, is to have another in some out-of-the-way place. If the houses are two or three hundred yards apart, fences will not be re-The houses need not be expensive, and most farmers have old lumber lying around, or an old shed are the ones who pay good prices for that ought to be tern down, and all horses when they find what they want. this can be worked into the poultry houses. The houses should, at least, be twenty-five by fifteen feet for fifty tablespoonful for a dose, is a remedy fowls. Have the roof firm and tight, for ropy milk. Ropy milk, however, and then line the house inside with seldom results unless the cow is milked good, stout building paper. Little too soon after calving; it disappears cracks in the sides of a house or damp- later on. ness is the cause of sick fowls during the winter season. The front and southside of the house should be seven or eight feet high and have two ordinary sized house windows therein, while the back or north side should be four or five feet high. The reason why the house should be large, light and dry, is because during the cold or stormy days of winter the fowls should be confined therein; and if plenty of litter is kept on the floor, and small grains are buried under this, the fowls will be kept busy and happy all day. This means plenty of eggs, and plenty of eggs in winter means plenty of money just when money is most needed. Do not be afraid of shutting the house up as tight as possible at night, but during the day, when the hens are confined, open the windows and give plants of in the windows better plan is to keep the supply in a and give plenty of air, using wire netting to keep the fowls from flying out.
It must be remembered that hens are dressed just as heavily in the daytime great extent if left exposed. as at night, and if kept too warm during the day they will feel the cold of keeps only one or stwo cows is more night more, and sickness will be the interested, or should be, in having

POTATOES FOR COWS,

The Veterinary School of Lyons France, has been making some experi-ments in the use of potatoes for feeding dairy cows. The results are summarized as follows:

Dairy cows, when deprived of all other neurishment than potatoes (which should be given raw and cut) will consume per day an average of seven per cent. of their live weight. Under the influence of this exclusive regimen there was an increase in the quantity of milk and a notable loss in live weight; this result was very clear and remarkable. Cooked potatoes were more readily taken by the cattle, but when they were given alone, and every other form of nourishment was excluded, rumination was affected or stopped, and digestion was hin-dered. The use of cooked potatoes could not, therefore, be persisted in.
Whether they are raw or cooked,
potatoes should be mixed with some other food to constitute a convenient ration, both from the double point of view of milk production and for fattening purposes. This mixture of ra-tions is also favorable to the mechanical and chemical acts of digestion.

From observations on a lot of dairy cows fed with a ration of which pota toes formed the half of the total dry matter, and on another lot where they only formed twenty-two per cent., it was fully recognized that the first or larger quantity was clearly preferable to the second or smaller. From other experiments it appeared that raw po-tatoes favored the production of milk, while an equal quantity which had been cooked fattened and increased the weight of the animals. Under the influence of a ration of which cooked potatoes formed the basis, the amount of sugar in the milk was tound to rise, but the increase did not continue when the ration was changed.

An analysis was made weekly during nearly four months of (1) the milk of eight cows whose ration contained about forty-four pounds of potatoes and (2) of another lot to which twentynot be advisable to confine pigs to this, diet exclusively, but given with a sity of the proportion of dry extract and caseine, and in the second an in-crease of butter and mineral matters, BAD TEMPER IN THE DAIRY.

Has any one ever figured up the lated by the fact of the milk being sold off the farm or used for butter or cheese making.

TEMPERANCE.

ARCHDEACON FARRAR OF TOTAL ABSTINENCE. Archdeacon Farrar, writing of total abstinence in the British Workmen, says:
"I was not a total abstance till after I was
forty years old, because the desirability of
setting the example had never been brought
home to me. But from the day that I became
one, the total abstantion from alcoholic
liquor has never given me the smallest frouble, nor caused me the least regret; nor
would it cause my real trouble to any
healthy man who had always been moderate
and temperate, and had never fatally porstanded bimself that drink was a necessity to
him."

I know of no real occasion for intoxicants, either as a beverage or medicine, for the use of human beings. It is impossible for alcohol to afford any real strength—simply a temporary excitoment, a dangerous agitation of the whole system, to be succeeded by a corresponding debility; such an excitement, such a stinulation, being simply a determined, a vigorous effort of nature to expel a foc as promptly as possible; every organ of the body, every membrane, every tissue and nerve robelling against the presence of such a disorganizer within the vital domain.—Dr. J. H. Hamaford.

THE TWO BOADS.

The following coincidence was related as having come under the observation of one of our leading ministers.

Of two young mee, one signed the piodge, while the other became very scornful and insisted that his friend could never amount to anything in politics or society unless he took a friendly glass. Years went on ; the one who "could never amount to anything was elected to a third term in the Senate, an bonored member; the remains of the scoffer were shipped home from the West in a pine box on which was written: "Died of delirium tremens." lirium tremens.

An enthusiastic giri often chooses for a lucismal the man that drinks to excess, against all the lessons of experience; he is so generous and noble-hearted when he is sober. Surely she can reform him—he has resisted the words of the priest, the grace of the sectaments, the tears of his mother, the entreaties of his sister—but she, and only she, can reform him, and change a satyr to Hyperion! And she rushes to a surer fate than does the Hin in widow to a funeral pyre. She is presumptions, if you will, and she safters. A woman may change utterly for the love of a man but few men—probably three in a thousand years—bave chanced entirely for the love of a woman. How many times must this be said in vain. There goes Castara, pale, worn, miserable, looking for her bushand—who swore last spring to reform for her sake—among the taverns of the city; and here comes Iphigenia, passing and pitying her, who to-morrow will marry Bubulous, in the belief that her influence will make a new man of him.—Maurice F. Egan. MARRYING TO REPORT HIM. A STUDY IS HEREDITY.

A specialist in children's diseases, who has for tweive years been carefully noting the difference between twelve families of drinkers and twelve families of temperate ones, reports that he found the twelve drinking lamilies produced in those years fifty-seven children and the temperates sixty-one. Of the drinkers twenty-fleve children died in the first week of life, as against six on the other side. Among the children of the drinkers were five who were thots, five so stunted in growth as to be really dwarfs, five when older became epileptic; one, a boy, had grave choren, ending in idicey; five more were diseased and deformed, and two of the epileptics became by inheritance drinkers. Ten only of the fifty-seven were normal in body and mind. On the part of sixty-one of the temperates; two only showed inherited nervous defects; five died in the first week of weakness, while four in later years of childhool had curable nervous diseases, and fifty were in every way sound in body and mind. National Temperators Alalist in children's diseases, who has eases, and filty were in every way sound in body and mind,—National Temperance Ad-

The proportion of abstainers amongst the greatest intellects of the earth is much greater than the proportion of abstainers in the community generally. Amongest them instance Sidney Smith, Cardinal Mannine, Professor Rolleston, Newman and Green, of Oxford, Archideacon Farrar, Dr. Lightfoot, late Bishop of Durham; Dr. Temple, Bishop of London; John Bricht, Dr. P. R. Lees, Dr. B. W. Richardson, Presidents Lincoln and Garfield, Lloyd Garrison, Wendell Phillips, Harriet Martineau, M. Chevreul, the great French chemist, who lived to over one hundred years, and of whom it was written, "Hedricks no wine and has never drunk any." Charles Waterion, the naturalist, who said: "I am now four score and one years. I do not even know the taste of wine nor of any spirituous liquors, and sixty-seven years have now passed since I drank a rines of heer." The late Sir William Gau! F. E. S., the renowned physician, said, "I think that instead of flying to alcohol, as many people do when they are exhausted, they might very well drink water, or they might very well take food, and would be very much better without the alcohol. If I am fatigual with overwork, personally, my food is very simple. I can the raisins instead of taking win, I have had a vary large experience in that practice for thirty years. "—Alliance News.

ALCOHOL ON THE CONTINENT. Alcohold on the continent.

According to an article by Dr. C. R. Drysdale, in the Echo (London), there is arising on the Continent a wave of medical opinion in favor of total abstinence of healthy persons from alcohold drinks. He quotes from an article by Dr. E. Jordy, of Berne, the following items from which is shown the current of medical opinion.

In 1898, one death in seventeen which occurred in Switzerland, was ascribed to drinking habits (thus including women and children).

Dr. Speyer says that one-eighth of the inane in public asylums were sent there from

In the Zurich Lunatic Asylum one-fourth of the cases were ascribed to drink.

Dr. Bur, a well-known writer on German prisons, alleges that forty-four per cent. of the prisoners were intemperate.

Mr. Otto Lang found that eighty-eight

Mr. Otto Lang found that eighty-eight per cont. of the crimes committed in Zurich were due to drink.

Professor Strumpell, of Erlangen, says that slooked has an evel influence in the causation of most diseases, and is the ruling came of dyspepsia in adults.

The noted professors of physiology, Gaulo in Berne, Hortgen in Lausanne, Bunge in Basic, and Schiff in Genevs, are total abstainers from alcohol.

Mr. Brassey found that burrow-men who avoided alcohol could do as much work in eight and a half hours as non-abstainers could do in ten hours. Swiss contractors find the same true among Italian workmen.

TEMPERANCE NEWS AND NOTES, If resolutions were ballots there would con be an end to the liquor traffic.

The Chicago School Board has discovered that its real estate agent has been renting school property to saloons and gambling

The World's Petition has been signed officially by the Pythian Sisterhood and Pythian Sisters, the two organizations aggregating a membership of 30,000. The number of "hard drinkers" in our country to-day is estimated to be 2,590,000. And an average of four other persons are iffected by each one's debauchery and

Superintendent of Police Byrnes, of New York City, says that 63,480 violations of the law are known to have been committed by saloon-keepers of that city in the three months beginning June 7th.

Discouraging to Burgiars,

There is little encouragement for a man to be a burglar nowadays. When he has an earnest aspiration to rise to eminence in the profession, inventive genius always does all it can to bother him. For instance, the vaults of the sub-treasury in San Francisco are fitted with wires laid between every two rows of bricks, so that any attempt to interfere with the cement or the bricks will disturb an electric circuit and sound a warning bell. -Boston Courier.

It is reported that France will have nearly 5,000,000 bushels of wheat for

ASSIST NATURE a little now and then in removing offending matter from the stomach and bowels and you thereby avoid a multitude of distressing derangements and discases, and will have less frequent need of your doctor's service.

Of all known

Of all known agents for this purpose, Dr. Pierce's Pleasant Pellets are the best. Once used, they are always in favor. Their secondary ef-Their secondary effect is to keep the bowels open and regular, not to fur-ther constipate, as is the case with

bowels open and regular, not to further constipate, as is the case with other pills. Hence, their great popularity with sufferers from habitual constipation piles and their attendant discomfort and manifold demagnements. The "Pellets" are purely vegetable and perfectly harmless in any condition of the system. No care is required while using them; they do not interfere with the diet, habits or occupation, and produce no pain, griping or shock to the system. They act in a mild, easy and natural way and there is no reaction afterward. Their help lasts.

The Pellets cure biliousness, sick and

malural way and there is no reaction afterward. Their help lasts.

The Pellets cure biliousness, sick and hillous headache, dizziness, costiveness, or constipation, sour stomach, loss of appetite, coated tongue, indigestion, or dyspepsia, windy belchings, "heartburn," pain and distress after cating, and kindred derangements of the liver, stomach and bowels. In proof of their superior excellence, it can be truthfully said, that they are always adopted as a household remedy after the first trial. Put up in scaled, glass vials, therefore always fresh and reliable. One little "Pellet" is a laxative, two are mildy cathartic. As a "dinner pill," to promote digestion, or to relieve distress from overcating, take one after dinner. They are tiny, sugar-coated granules; any child will readily take them.

Accept no substitute that may be recommended to be "just as good." It may be better for the dealer, because of paying him a better profit, but he is not the one who needs heip.

Revival of Archery.

There seems to be a revival in England of archery, the contrast between the hurried movements and unbecomng glow of the feminine lawn tennis player on one side and the graceful and stately calm of the fair archer on the other being altogether to the advantage of the latter. It is a graceful diversion, and one at which Queen Victoria excelled thirty or forty years ago, when archery was one of her fa-vorite pastimes. To this day she holds the office of dean of the most ancient guild of archers in the United Kingdom, and, like the Emperor of Austria and the Czar of Russia, has a body guard of archers. It constitutes part and parcel of the Scottish portion of Her Majesty's household, and only appears at state functions at which the Queen may be present north of the Tweed. Its Captain General, who occasionally wears the green and gold uniform of the corps, is the Marquis of Lothian.—New York Advertiser.

For Twenty Years Scott's Emulsion has been endorsed by physicians of the whole world. There is no secret about its ingredients,

Scott's Emulsion

because they know what great nourishing and curative properties it contains. They know it is what it is represented to be; namely, a perfect emulsion of the best Norway Codliver Oil with the hypophosphites of lime and soda.

For Coughs, Colds, Sere Throat, Bronchitis, Weak Lungs, Consumption, Scrofula, Ansmia, Weak Babies, Thin Children, Rickets, Marasmus, Loss of Flesh, General Debility, and all conditions of Wasting. The only genuine Scott's Emulsion is put in someon-

colored wrapper. Refuse inferior substitutes!
