Steel in Shipbuilding.

Steel has been used for shipbuilding only about twenty years, yet it is estimated that ninety-six per cent. of the vessels built at the present day are of steel .- Hardware.

How to Relax.

Cold weather, whether damp or dry, will produce, even if we are extremely careful, sudden soreness and stiffness of the limbs and muscles. This is much owing to sudden shange of temperature from a warm room to cut-doct air. Cold contracts and warmth expands or relaxes, and it is for this reason that when one is sore and stiff from sudden cold, the application of St. Jacoba Oli brings immediate and sure relief, as it gives warmth and relaxation to the stiffened muscles and makes supple the sore and cramped limbs. With a vigorous rubbing with this great remedy for pain, no one need suffer with soreness and stiffness more than a very short time. It is especially the best reamedy for suffering where we require a prompt cure, and it is particularly the test because its cures are permanent. and muscles. This is much owing to sudden

California now exports about \$3,000,000 worth of carried feathers yearly.

If you have tried Dobbins' Floating-Boran Sons you have decided to use it all the time. If you haven't tried it you owe it to yourself to do so. Your grocer has it or will get it. He sure that wrappers are printed in red.

Hood's Sarsaparilla

Rood's Pills cure Liver file; easy to take, easy to operate. Ele. Happy and Contented Beaf Children,

It is generally supposed that the deaf have a tendency to moroseness and melancholy. This is lesst true of the orally educated adult, and among the children in the oral schools is not true at all. I know of no happier or more contented lot of children than are to be found in these schools. The visitor who expects to enter a place of silent halls, quiet play-rooms and noiseless yards is much surprised to hear peals of childish laughter and cries and shouts as the children romp and frolic out of school hours .-Century.

The first number of a new paper entitled the German Industrial Advertiser, in the Japanese language, has

The most dangerous wrong step is

WOMAN'S LONG HOURS.

SHE TOILS AFTER MAN'S DAY'S WORK IS DONE.

What She Has to Contend With-Work That Sooner or Later Breaks Down He

Deliente Organism. The great majority of women "work to live" and "live to work," and as

areyet performed, and many personal matters to be attended to. They have mending to do, and dresses or bonnets to make, and long into the night they toil, for they must look neat, and they have no time during the day to attend

to personal matters. Women, therefore, notwithstanding their delicate organism, work longer and more closely than men.

They do not promptly heed such signs as headache, backache, blues, pains in the groins, bearing-down, "all gone" feeling, nervousness, loss of sleep and appetite, whites, irregular or painful monthly periods, cold and awollen feet, etc., all symptoms of womb trouble, which, if not quickly checked, will launch them in a sea of

There is but one absolute remedy for all those ills. Any woman who has to earn her own living will find it profitable to keep her system fortified with this tried and true woman's friend. Lydia E. Pinkham's Vegetable Compound speedily removes the cause and effects a lasting cure.

We are glad to produce such letters as the following from Miss M. G. Mo-Namee, 114 Catherine St., Utica, N.Y.: "For months I had been afflicted with that tired feeling, no ambition, no appetite, and a heavy bearing-down feeling of the uterns. I began to use Lydia E. Pinkham's Vegetable Com-

pound. Soon those bad feelings passed away; I began to have more ambition, my appetite improved and I gained rapidly in every way, and now I am entirely well. I advise all my friends to use the Compound, it is woman's truest friend."

PISO'S CURE FOR N Bust Cough Syrup. Tastes Good. Use CONSUMPTION

FOR THE STRAWBERRY BED. Get your strawberry plants as near plants out just as early in the spring as you can prepare the land. Culti-vate a great deal to keep weeds down for mulch. Next best is horse manure with lots of straw. Leaves may be used if they are removed in the spring. -New England Homestead.

NEW BUDDING METHOD,

Here is a brief description of the method practiced at the Texas Station: After cutting off a bud with some wood attached cut a slip of bark, with some wood attached to it also, down about an inch, leaving it still attached at the lower end. This cut must be made about the size of the cut bud, so that the bud will fit evenly over the cut place. Part of the loose slip should be cut off and the bud slipped down squabs for market over other poultry between the wood and the slip. Tie the are these, says a poultry paper: Less method in January. The buds soon work, and when a pair of pigeons are knit firmly and can be forced out in once firmly mated they will remain so spring. This method can be used to and do well for ten or twelve years advantage in dry weather when the unless separated by accident or disbark refuses to slip, or on stock which case. failed to take when budded in the usual way during the summer. Roses to the profit. From a pair of first-and many kinds of trees have been class bi is you can depend on raising

REFECT OF FOOD ON EGGS.

The Rural New Yorker has lately been making inquiries from prominent poultrymen in regard to the effect of feeding upon the size of eggs; also whether the size will make any difference in the number which a hen will lay. The varied answers show that even the most experienced feeders are very much in the dark upon this sub-It may be inferred, however, from the answers that the grains have much less effect in increasing the size of eggs than have meats, bran and other nitrogenous foods, but grains fed in excess will make the hen too fat, and her eggs will either be small or be retained until abnormally large. As to the effect on the number of eggs opinions are about equally divided. Perhaps the answer to either question depends more upon the breed than upon any particular food. The ideal food for laying hens as given by Mr. I. K. Felch is as follows: "The combination of thirty pounds of corn, fifteen pounds of oats, ten pounds of wheat, ten pounds of barley and fifteen pounds of wheat bran, thoroughly mixed, gives the largest number of eggs possible. This is used as the morning soft food, with twenty-five per cent. of meat feed, the afternoon feed being mixed grains."

HOW TO PACK BUTTER.

Butter is never so good as when used within one week from the time it leaves the churn. It possesses then a delicate aroma and a peculiar, indescribable flavor, which soon passes away and is never 'present thereafter; but butter properly made can be kept

sweet and in good order for months. Get the butter in good condition as soon as possible after churning and pack it firmly in gallon or half-gallon jars are bought ask the seller, as he them, so that a record of the amount of butter in each jar can readily be kept. Pack the jars level full, tie a round piece of strong, thick cloth over the top and place it bottom side up into a new, large crock. Do not pack butter made at different times in the same jar, but store only those jars

that can be filled at one churning. Make strong brine, using all the salt the water will absorb, adding to each gallon a teaspoonful of saltpeter and teaspoonful of granulated sugar. Scald the brine and skim it thoroughly. When cold strain through a wet thick cloth into the crock. Add more brine from time to time to keep the jars covered two inches in depth. Tie a thick cloth over the crock to protect from dust, and over this piece wooden cover to exclude the light.

Do not keep the crock on the cellar floor, even if it is a cemented one, but on a platform if possible, with slate underneath the crock to insure free circulation of air. This will prevent mold forming on the bottom of the crock.

Several smaller crocks may be used in which to store the jars rather than use the large crock. To clean jars and crocks, use a bath of hot lime water or strong hot soda water.— New York Farmer.

TIME TO MAKE CUTTINGS.

During the winter months is the During the winter months is the especially the blue jay. We catch time to make cuttings of such trees them and let them go unharmed. and shrubs as it is desirable to increase. Quinces, currants, gooseberries and grapes are readily increased by cuttings. In the case of shade tering against the net. My man went trees willows and poplars are easily insde and chased him from one side to grown from cuttings, but the great majority of trees need to be raised his hands on him at where the fence from seeds, layers, or by budding or rail met, but the bird managed to slip grafting. But when it comes to the through his hands and down between flowering shrubs which adorn our the net and the outside of the fence lawns, cuttings are the chief reliance and gained his liberty. All this time of propagators. The time to make be hung on the berry and flew away them is while vegetation is dormant, with it. That certainly is a good it and it is better done at least a month | lustration of bird pluck. or more before spring comes. The beautiful golden bell, weigla, mock orange, spire, duetzia, and athaea among many others are easily raised

in this way. The best shoots for the purpose are and the most striking feature of the those of last year's growth. The ex- view is the absence of chimneys. There act length is not particular, so that is not a chimney in all Mexico, not a two or three joints are included in grate, nor a stove, not a furnace. All each one. About nine inches is a good the cooking is done with charcoal in ength for most sorts, though grapes Dutch ovens, and while the gas is having the joints far apart may be a sometimes offensive one soon becomes

when the lower part is ent just below an eye that rooting is easily accom home as possible. The Bubach is a plished, so cuttings are usually made good variety. As soon as the plants in that way. It is not so essential at the upper end where the cut is made, ten with much. Got the strawberry but as the buds push from the joints all wood above the highest one is useless. After the outlings are made place them in a cellar, buried up in even though you see no weeds. Do not cover in the fall until the growth has ceased. Cover with marsh grass spring. When the work is done about February, it will be found that the cuttings are nicely healed over by the time spring comes, which is in favor

of the success of the operation. When the winter is over and the soil is in good condition for working the planting may be done, setting them so that two-thirds of their length are in the ground and one-third out. ordinary season the most of them will be well rooted by fall.-Practical Farmer.

BAISING SQUARS. The main advantage of raising squabs for market over other poultry bud tightly with raffla or corn shuck. competition, less trouble in attending success has been attained with this to young, the old birds do all the

This, as any one can see, adds greatly budded in this way. This method eight or nine pairs of squabs per year, greatly prolongs the season of bud- which can be marketed at the rate of ding and will to that extent somewhat lessen the cost of the work.—The Silcost of feeding the old birds will not ver Knight. a sitting, one day intervening between the laying of the first and second egg. The incubation takes about eighteen days, and while attending to the young in one nest they generally build another nest and have eggs before the young are capable of taking care of themselves. The young, when ready to fly out—which will be when about thirty days old-are marketed. birds breed all the year with the exception of the molting season.

The first thing connected with a business of this kind is to have good, warm quarters, although artificial heat should not be used. On almost every farm there is some small loft or building which might be used for a pigeon cote if properly sheathed with paper or otherwise.

As pigeons do very well in confinement, those who wish to keep them in this way must build an aviary made of poultry wire. In the interior arrangement of the house two sides should be given to nests, of which two should be provided for each pair of birds (nests should be about one foot square) and one side for roosts, of which the inverted V shape is the best.

We now come to the stock, which must be good, strong, vigorous birds, which are good parents and prolific breeders. We find all this in the homer, which derives its name from its love for its home, and which I consider the best bird for our use. We cannot say too much in its favor.

To prepare the birds for ing they should be mated and not allowed to choose their own mates, which they will do when about five months old. For this purpose a medium size box with a wire partition in the middle is needed. Place the cock and hen, one in each compartment, for a day or two; then place them together and they will mate. jars. Those containing five or six pounds are preferable. When the with a large hen. If one bird is a marks the weight of each, to number year older than its mates the results will be better.

The birds should be fed three times a day on red wheat, white Canada peas, small, whole or cracked corn, with now and then some bread crumbs or a few handfuls of hemp, canary and millet seed. Hemp seed is very beneficial [during the molting period, as it is very stimulating. Only as much feed should be given at one time as will be all eaten. An abundance of fresh water must always be on hand, and a shallow vessel for bathing, to be used except in very severe cold weather. A lump of rock salt, which must be wet every morning for them to pick; plenty of grit, some old plaster for the eggshells and tobacco stems left on the floor for the pigeons to build their nests of, which will keep out all vermin, should be provided. The floor should be covered with sand or gravel and everything kept as clean as possible.

A Pincky Blue Jay Thief,

My raspberry patch if fifty feet square, surrounded by a wire fence, says a contributor to Mechan's Month-So many birds make their home in the wooded rooms within ten feet that it is necessary to protect this patch by netting, which is supported by wires strung overhead. The net hangs over the sides of the fence three or four feet. Occasionally a bird gets inside,

Yesterday my man and myself were near and saw a blue jay in there with a ripe red raspberry in his bill, flutanother three times, and finally got

TEMPERANCE.

A TRUMPET CALLS When song springs from the vine
And chants the praise of wine,
The evil seeds
In such smooth words and torse
With not a hint of ourse
To soul and home and purse,
Will grow bad deeds,

A legion cups are thine,
But each, or coarse, or fine,
Will taint the breath;
They tempt souls to their fall,
A lie lurks in them all—
Sweet first, at last as gall,
The end is death,

A piedge we sign with joy.
Up, every girl and boy,
To fight the drink,
Let each one find his place,
And then from God seek grace
To set through life the faces
Against the drink,

Would we our country save
We must be true and brave
And steadfast stand.
Have laith in God and pray:
Work, vote, and haste the day,
That from the domon's sway
Shall free our land.

—Rev. A. G. Lawson, in the Temperance Advocate.

In a recent Issue of the North American Review was an article by the Hon. J. C. Parker (since deceased), who for twenty-five years was Judge of the Federal Court for the Indian Territory and the western district of Arkansas. During this period nearly a thousand men stood before Judge Parker charged with murder. He sent more criminals to the gallows and jails than any other judges in America. WHISEY AND CRIME.

America.

"When we go to facts," said the Judge, "we find that during the last six years there have been 43,902 homicides in the United States, an average of 7317 per year. In the same time there have been 723 legal executions and 1118 lynchings. These startling figures show that crime is rapidly increasing instead of diminishing. In the last year 10,500 persons were killed, or at the rate of 875 per month, whereas in 1890 there were only 4200, or less than haif as many as in 1895. This bloody record shows a fearful increase of the crime which destroys human life."

Asked as to the part whisky hail played in this awful carnival of blood, Judge Parker replied:

"At least three-fourths of the homicides committed in this country are attributable, directly or indirectly, to the use of intoxicants. The question is not a new one to me. It has been forced upon my attention almost continually since I have been upon the bench. I think the same ratio of whisky homicides would hold good in this court. The number that were influenced indirectly is hard to estimate, and it is more than probable that in every case of homicide whisky has played its part, either on the side of the oriminal or of the victims. To my positive knowledge whisky was the direct cause of twenty-five out of twenty-six murders committed in one locality during the past twenty-one years, the parties to the quarrels having been drinking at the time or immediately before the tragedies occurred. The remaining one was committed by a young boy, and I am not positive now but that either himself or the man he nurdered was under the influence of liquor at the time. It is really difficult to recall a case in which whisky did not figure one way or another, and the examples are prominent in which murderers were excited immediately to the commission of their crime by becoming intoxicated. 'At least three-fourths of the homicides

TES OR NO.

We take from Our Parish Calendar, of Lawrence, Mass, the following excellent presentation of an important question:
Whiteh do you think is for the best interests of the community?
Den't allow yourself, in considering this question, to be prejudiced against any class of people in making up your mind—ministers, politicians or business men. The questions for each voter to weigh conscientiously before casting his vote are these:

Is the granting of licenses in this city for the moral good of the city?

Is it an advantage to have saloons open in fifty different places in the city where men may congregate every evening and drink, and in general debauch themselves to that extent that their wives and children suffer in concequence?

Is it to the advantage of the city that, all day long, women may have convenient places in which to purchase that which degrades them and makes them unfit, for the duties of wife, mother, sister or daughter?
Is it to the advantage of the el

Is it right to develop the weakness of the

Are the evils flowing from the use of in-extenting liquors tessened by legalizing the aloon?
This is one of the moral political questions a which you are bound to let your con-

cience spenk.

A WIFE'S COMPLAINT, A wifes complained.

A majority of the mothers complain of the neglect and brutality of their husbands, raused by excessive drinking habits, and say they are hungry and almost shelteriess, not because they are poor through illness, or because of lack of work, but because the men spend their wages at saloons. One woman, aged about thirty-five, told a story more than half a century long in a few words: "I married a man who was good to me as long as I was young and nice looking. My mother as I was young and nice looking. My mother as I was young and nice looking. My mother hid the same thing with the same result, and her mother met the same fate nearly sixty years ago, and I suppose this baby will go and get a drinking husband if the sanitarium succeeds in saving her poor little life, if my husband had treated us right, I wouldn't have to come here with my baby nor would I have to depend on the matron giving me car tickets in order to get home and get tack to-morrow. I wish the rumholes of the city were sunk at the bottom of the lake."

What do you think of that sort of a record, and what about the value as citizens of the descendants of such a line?—Sacred Heari Review.

WHAT THE LIQUOR TRAFFIC DOES.

Sixty million dollars are annually exand punishment of criminals, made so by the liquor traffic; and 40,000 criminals are the liquor traffic; and 40,000 criminals are supported in the prison houses of the country at the public expense. Add to this all other expenses of government caused by the diquor traffic, such as the large amounts necessary to provide for the insane and the pauper classes that have been made such by intemperance, and you will discover that the amount annually expended by government in consequence of this traffic is enormous. Take the traffic away, and you remove the cause of this expense. The revenue from a sober people will then be amply sufficient for purposes of government,—Rev. J. W. Roberts, of Atlanta, Gs.

DANGERS OF DRINK.

This is the testimony of Police Commissioner Andrew D. Parker, of New York:

"My undividual testimony is infinitesimal as compared with the testimony of generations of public observers, of statesmen, of statisticians, of scientific and religious teachers and thinkers that there is no crime producting agency that anywhere. reactors and finited that there is no crime producing agency that anywhere approxi-mates the liquor traffle in its dreadful effi-ency. I am not a Prohibitionist, nor a Pur-itian, nor a member of a church, but no mar with eyes in his head and with the least particle of heart or conscience can fail to realize the danger and handleap that inten-perance is to our Anglo-Saxon cyclification perunce is to our Anglo-Saxon civilization especially when it does its work on ou nervous American organizations."

ONE TOWN'S PROBERTION RECORD. Prohibition has prevailed for twelve years in Delton, Ga., a town of 4500 inhabitants. During this time its property has increased in value ninery per cent.; its school attendance sixty per cent.; its ferms of court, both civil and criminal, have been reduced one-half, its police force the same, and its county poorhouse is almost tenantless.

TEMPERANCE NEWS AND NOTES. No man who is intoxicated, or whose breath is even tainted with strong drink, is allowed to take his post on a train on the Grand Trunk Hailway. From this it is inferred that the engineer blows his breath is the face of the imprector before he is allowed to enter the cale. to enter the calDled in Their Blue Coats,

Passenger cars to the number of 1934 were manufactured in the United States during 1895 for use in other countries.

Bullet in a Hallstone,

Colonel Clark R. Westcott, of London, who has been spending a couple of months in Chicago and the West, in the interest of a syndicate which owns considerable mining property in this country, is responsible for the following account of a singular natural phenomenon. His story is as follows:

"One hot day a couple of weeks since I was riding along a mountain road in Colorado on my way to s mine in which I am interested, when I noticed high above me, soaring in majestic circle, an eagle. I had a 45-90 Winchester slung across my back, and it was but the work of a moment to unsling the gun and fire at the bird, which appeared to be directly above me. The shot was a clear miss, and not earing to waste any more cartridges, I was about to ride on, when I was startled to hear what I took to be the dull 'chung' of a stone thrown by an unseen hand, which fell into a little gully partly filled with leaves, within twenty feet

of me. "I looked carefully about me in all directions, but could see no sign of a buman teing, and then dismounted, and, scraping back the leaves, was astonished to find a piece of ice as large as a goose egg, and about the same shape. I was further astonished to discover my rifle ball firmly imbedded in its center. I have specu-lated a great deal over this phenomenon since that time, and the only solution I can see is that the ball in passing through the cloud gathered the moisture and held it by its whirling motion, so that it was frozen at a higher altitude and fell to the earth as I have described. "_Chicago Chron-

Napoleon's New York Trees, On West 159th street and St. Nicholas avenue, Washington Heights, stand a number of remarkable trees. They were formerly in the grounds surrounding the old Jumel mansion, which is now known as Earl Cliff. They are Egyptian cypress, and have a history like everything pertaining to this remarkable mansion and its grounds. They were sent as a present to Napoleon Banaparte from the Sultan of Egypt, as a gift of bonor, but arrived at Havre, France, after the Battle, of Waterloo. Stephen Jumel, who was in France at that time, and a personal friend of Napoleon, succeeded in gain-ing an audience with the Emperor the night before he was banished to the Island of St. Helena. Napoleon presented these trees to Jumel, brought them to America on the clip-per ship Eliza, which he had chartered with the hope of aiding Napoleon to escape to this country. These trees, when brought here, had their native earth still clinging to the roots. They were planted as described above, where they flourished and grew to a large size, spreading out their peculiar branches wide over their adopted soil, a muto reminder of the decay of Em-pires, as well as people.—New York

"Walter Baker & Co., of Dorchester, Mass., U. S. A., have given years of study to the skilful preparation of cools and chocolate, and have devised machinery and systems peculiar to their methods of treatment, whereby the purity, palatability and highest nutrient characteristics are retained. Their preparations are known the world over, and have received the highest indorsements from the medical practitioner, the nurse, and the intelligent housekeeper and esterer. There is hardly any food-product which may be so extensively used in the household in combination with other foods as cooos and chocolate; but here sagain we urge the importance of purity and nutrient value, and these important points, we feel sure, may be relied upon in Haker's Cooos and Chocolate."—Dietetic and Hygienic Gazette.

t. Because it is absolutely pure. 2. Because it is not made by the so-called Dutch Process in which chemicals are used.

Because beans of the finest quality are used. 4. Because it is made by a method which preserves unimpaired the exquisite natural flavor and odor of the beans. 5. Because it is the most economical, costing less than one

a cup. Be sure that you get the genuine article made by WALTER BAKER & CO. Ltd., Dorchester, Mass. Established 1780.

An elderly lady living at Fordham Heights, a part of New York City, and who was known to be a warm advocate of Ripana Tabules for any case of liver trouble or indigestice, said ton reporter who visited har for the purpose of learning the particulars of her case: "I had always employed a physician and did no on the last occasion Thad for one, but at that time obtained no beneficial results. I had never had say faith in patent mediciones, but having seen Ripans Tabules recommended vary highly in the New York Heraid, I concluded to give them a trial, and I found thay were just what my case demanded. I have never employed a physician since, and that means a saving of \$3 a cc. dollar's worth of

Ripans Tabules

lasts me a month, and I would not be without them now if it were my last dollar."

At the time of this interview there were present two daughters who specially objected to their mother giving a testimonial which should parade ber name in the newspapers, but to this the sider lady argued: "There may be other cases just like mine, and I am sure I take great pleasure in recommending the tabules to any one affected as I was. If the telling about my case in the papers enables some other person similarly affected to be as greatly benefited as I have been, I see no objection." And the daughters, familiar with her case and knowing how earnestly she felt about the benefit she had received from Ripans Tabules, decided that their mother was quite right.

"A Fair Face May Prove a Foul Bargain." Marry a Plain Girl if She Uses

SAPOLIO

134 Leonard Street, N. Y. City for it serves the purpose of the great encyclopadius costing a hundred times the 50c, taked. It is completely Indexed, making the Information instantly available. With this values of the book you have a world of knowledge at your fingers' ends, and can be casily supply a lack of early educational advantages. When reading, the case of the case of
