is desired to have the inp come up or

"The hand that rocks the cradle," etc. Is woman going to rule the whole world in form as she already does in substance? England, Spain, Holland and China all have women on the

Thirty prominent women of Bowling Green, Ohio, led by the wife of a State Senator, have donned calico dresses and begun work peeling tomatoes at three cents a bucketful. They do this to set an example to many girls of the place who need employment, but are too proud to seek it in a canning factory.

The bureau of police and health officers of Pittsburg, Penn., have placed conspicuously around that city printed signs requesting all persons not to spit on the sidewalks or street crossings, says Municipal Engineering. This effort is made in the interest of public health, and if it does not have the desired effect, an ordinance will probably be passed fixing a penalty for spitting on the sidewalks.

An interesting development of civilization in mid-Africa under British rule in the holding of a fine agricultural fair at Inluge. You will not find that place on any ordinary map, but it is not far from the famous Murchison Falls on the Shire River, in that region south of Lake Nyassa which was the scene of Livingstone's early labors. The show is reported to be particularly strong in exhibits of cattle, poultry, horses, wheat and oats, and fruit. The country is highly prosperous, and its salubrity and fitness for colonization by Europeans are established beyond dispute. It is by no means improbable that the early part of the coming century may see the basin of Zambesi the seat of a populous and enlightened empire.

The return of the Chicago and Atlants to service marks the accomplishment of a very interesting step in navy making, says the New York Commercial Advertiser. These-with the Boston-were the first eruisers in the new navy. They have been so surpassed by the newer cruisers that in ten years from their completion they were obsolete. Now they have been so remodelled that they are new again: their armament increased, military masts added, and new engines put in which give them eighteen instead of fifteen knots speed. This is the first example of modern navies of bringing an old ship perfectly up to date. If the same thing can be done with battleships it will improve greatly the efficiency of the navy. England has some twenty battleships whose low speed, thin armor and muzzleloading guns make them almost useless in combat against the ships which every great nation is now building. These ships are carried on the admiralty list as effective, but are admittedly relied upon for coast defense only. It will be interesting if Yankee inventiveness shall teach European nations to rebuild obsolete battleships and make their paper squadron effec-

What is called the "A B C" of the Swedish educational gymnastics has been in use in the Boston primary and grammar schools since 1891. It has pleased both teachers and pupils, and this year an advance will be made to the higher course, such as has been used in the schools in Sweden and Norway for more than thirty years. Its introduction is expected to place Boston schools at the head in the matter of physical training. One of the prominent parts of the new order is that it introduces into the schools a schedule of games with balls, beanbags, etc., intended to develop a quick and responsive mind. Ten minutes of the forenoon session will be devoted to instruction in the Swedish movement, and during about six minutes each afternoon the pupils will have the use of the school-rooms for marching and for games. Of course, the yards will be used for the marching and games exercises when that is more convenient. In the past the exercises have been the same for girls as for boys; but the new order provides for a slight difference in this respect. A further plan under consideration is to install in the grammar schools a set of Swedish apparatus such as a stall-bar. a "boon," or horizontal bar, a balance board, etc. When these are installed and ready for use, the physical training will be practically the same as it is in the high school for girls.

TREES WHICH DRAW LIGHTNING.

Seject Beeches For Shelter During a Storm

and Avoid Oaks.

Alex. McAdie has asked the Weather

Bureau to investigate the question

why some trees are more frequently

struck by lightning than others.

Apart from the importance of this

subject from other points of view, it

demands attention primarily as a mat-

ter of saving human life. As Mr.

McAdie shows, many people, particu-

larly farmers and those who work in

the fields exposed to thunder storms,

will work until the storm is almost

upon them and then run to the nearest

If the tree is an oak, and the charged

thunder clouds are moving toward it

with high electric potential, the per-

son or persons under the tree are in

the line of strain and all unconsciously

are contributing to the establishment

of a path for the lightning discharge

through themselves. On the other

hand, if the tree selected for shelter

happens to be a beech tree, there is

some reason to believe that it will af-

ford safety as "well as protection,

though the reason why is not at present made clear. It is known that the

oak is relatively the most frequently

and the beech the least frequently

Based on the somewhat loose colla-

tion of figures on the subject hereto-

fore available, it is estimated that in

the matter of relative attraction of

lightning, if the beech is represented

by 1, the pine stands at 15; trees,

collectively, rank about 40 and oaks

54. The trees struck are not neces-

sarily the highest or the most promi-

nent. Oak trees have been struck

twice in the same place on successive

days. Trees have been struck before

rain began and split, and trees have

been struck during rain and only

It is suggested that the division of

forestry and the division of vegetable

pathology shall combine with the

Weather Bureau in an exhaustive in-

vestigation of this subject, and that

those familiar with forests in their re-

spective neighborhoods will tender

their experience as to the relative fre-

quency of lightning strokes on differ-

ent kinds of trees. But before any

statement is made as to the danger of

standing under certain trees during

thunder storms, the more general

questions of the effect of lightning

upon trees will have to be gone into.

Such a study will deserve the co-oper-

ation of statisticians, physicists and

vegetable pathologists.—St. Louis

for the first time.

On the evening of the 4th of October, 1889, George and Alfred Cotgrove were engaged in trawling for soles near the spot already described. black clouds overhead, moving swiftly before a strong south-westerly wind, indicated to the practiced eyes of the fishermen the prospect of a dark night -one of the famous Leigh "bawleys" before, and her navigators-hereditary sailors, as all the Leigh fishermen are -were conscious of no presentiment of danger as darkness fell; and No. 416, catching the foam-crested waves on her weather bow, drove the spray aft in blinding showers. Sailing close to the wind, with topsail stowed and two reefs in her mainsail, the sturdy little craft made light of the gathering storm; and having taken those preoautions which are the second nature which came so suddenly upon them.

It was at 7 p. m. that the wind. veering suddenly round from southwest to northeast, struck the boat and the water rushed into the open hatchways. The squall was so nnexpected and the change of wind so sudden and complete, that the boat was flung on beam-ends before a single step could be taken to avert the steering, while Alfred was engaged with some tackle on the weather-deck.

George Cotgrove had only time to cry out, "Oh dear, Alf!" before a craft, swept him into the dark waters

With that last despairing cry still ringing in his ears, Alfred made a frantic effort to lower the mainsail. calling loudly to his brother at the same time. But George Cotgrove had weather-beaten "bawley" was sinking rapidly. The tiny boat which hung astern had gone down, and just before the larger craft made her final plunge beneath the seething waves, Alfred Cotgrove realized that his only hope lay in the direction of the topto reach the summit of the mast before the "bawley" sunk. Not a sec-

HE following re- | terrible to contemplate. A rising markable story of tide and a raging sea lay beneath a prolonged strug-gle against death overhead. The night was pitch black is well illustrative and bitterly cold. Clasping the iron of the power of staff with both hands, and clinging to human endurance the slender topmast with crossed under conditions knees, the unhappy man realized that of the most ex- he would probably be swept into hausting and terri- eternity at high water, and that, even fying nature. But fishing population of Leigh; but hav- the sail had only been lowered for the ing obtained full particulars of the purpose of hauling in the trawl; and tragedy from one of the chief actors, in another moment the boat disthe writer is now in a position to re- appeared slowly into the darkness, late the story to the reading public leaving me well-nigh frantic with de-

spair. The tide had now reached Cotgrove's knees, and the agony he endured as wave after wave swept over his body can neither be fully Daylight was fading rapidly, and the imagined nor described. The most hideous nightmare that a distorted imagination can conceive loses all its horrors before the kindly light of day, and can only be described by and "dirty weather." But their craft the sufferer, in all its gruesome detail, within a few moments of its oc--had weathered many a fierce gale currence. It is impossible for a man adequately to describe the sufferings of another, and it is an equally hopeless task for the suffer himself to convey to another miad the multitude of sensations which have crowded themselves into the one supreme mo-

ment of a lifetime. We can only imagine a frail human form clinging desperately to a few feet of mast, amidst a wilderness of whitecrested billows. We can understand the hopelessness of such a situation, of every born sailor, the brothers had intensified by the horrors of darkness no foreboding of the appalling disaster | and uncertainty. But the most emotional or imaginative reader would fail to comprehend a tithe of the mental torture endured by this man during a single minute of that proheeled her over to such an extent that tracted struggle for life. Cotgrove was clinging to the summit of the mast of Bawley No. 416 for thir-

teen hours! For the first five hours the tide rose steadily; but it was at the expiration of the fifth hour that the strangest of darkness was enacted. With the icy cold waves actually lapping his waist, Cotgrove believed that the final wave, breaking aboard the swamping moment had at length arrived, and he resolved to struggle no longer. Yet even while the fisherman, resigning himself to the fate which he now considered to be inevitable, was actually endeavoring to unclasp his numbed fingers, a strange gleam, similar to the flash of a search-light now passed beyond human aid, and illumined the broken waters, revealing the shadowy outline of a man

standing in a boat hard by. "For a moment," said the narrator, "I thought it was one of my mates come to take me off, although the attitude of the figure, standing in open boat with arms outstretched, caused mast. Acting on the inspiration of the me to tighten my grasp instinctively, moment, he made a superhuman effort | instead of letting go. And when the craft and its queer navigator had disappeared with the momentary gleam, ond too soon his fingers clutched the I felt convinced the vision had been few inches of iron forming a tiny sent as a warning. This convic-"staff" for the flag which decorates tion had no sooner entered my the mast-head on "regatta day" and mind than I felt the sunken wit's end. "Why, David," David!" festive occasions. No. 416 sankatthe bawley move slightly beneath me, same moment. The tide had just and in another moment she changed the child, "what ever is the matter? commenced to flow, and some fifteen sides, swinging the mast suddenly "Well, my dear," responded the great feet of the topmast remained above over in the same direction. The sensa- naturalist, simply, still gazing at the tion of flying through space in that baby, "it's very strange, but I can't Cotgrove was now safe for way was really terrible, and I was im- find a bottle large enough to hold him

change of the position, however, was a certain sign that the tide had turned, and I realized that the water would now begin to fall. This change occurred within a minute of the appearance of the vision.'

The knowledge that the maximum depth of water had been reached inspired Cotgrove with new hope, and he resolved to retain his hold of the mast until daybreak. It was midnight when the tide turned, and the fact that some seven hours must yet elapse before the welcome light of dawn could appear was almost too terrible for contemplation. Although the water fell gradually away from the body of the lonely watcher, the cold of those early morning hours was in-

"I kept holding on with one hand while I put the fingers of the other in my mouth to warm them," he said. "I felt no strain on my hands and knees at that time; the muscles seemed to be fixed in position, and my limbs were completely numbed with the cold. My thoughts were naturally of home and what my wife would say if I ever got there again. I had only been mar-ried a twelvemonth. My brother George left a wife and four children.'

Daylight broke at length, but it was nearly eight o'clock before the fisherman, more dead than alive by this time, descried a "bawley" boat scarcely a mile and a half away. He tried to wave his cap to attract the attention of those aboard, but his numbed fingers refused to close on the brim. Scarcely daring to hope that deliverance was now at hand, Cotgrove could only gaze despairingly at the distant brown sail, and pray that he would not once again be doomed to endure

the bitter agony of hope deferred.

The "bawley" altered her course and approached rapidly. The weatherbeaten form had been descried through pair of marine glasses, and a couple of willing hands were already preparing to put off in the smaller boat. Then the sails of the smack disappeared suddenly from sight, and a few minutes later a little craft manned by two sturdy figures in oilskins, bounded swiftly over the waves toward the partly-submerged mast which, for thirteen hours, had held Alfred Cotgrove above the jaws of death.

When asked what had become of his brother, the sufferer could only point dumbly into the broken waters. And it was not before he had been carried below, and revived somewhat with such simple restoratives as were at hand, that he was able to whisper hoarsely of the disaster and its miracu-

Strange to relate, the first "bawley" which came within speaking distance at that which had effected the rescue was manned by Cotgrove's father.

"Get under deck, mate-don't let your father see you!" cried one of the rescuers, addressing Cotgrove, who had erept on deck. Alfred hid himself as advised, and his father called out: "An awful

night, mates! I've had a barge run into me, broke my skiff adrift, and nearly sunk the old 'bawley' herself." "We've worse news than that for you," was the reply. "Poor George's boat was capsized in that squall. George has been drowned, and we've got Alf

Such was the simple fisherman's notion of breaking bad news as gently and as expeditiously as possible, and it is far from probable that a man of greater culture could have seized a more opportune moment or employed better words for the purpose.

Alfred Cotgrove was dangerously ill for many weeks after his terrible experience. His heart was seriously affeeted by its prolonged contact with the mast. At St. George's Hospital, to which institution the sufferer was ordered by the local doctors, he was informed that the vital organ was actually bruised by the continued pressure brought to bear upon it. He also suffered greatly from acute melancholia and headache. Night after night the grim tragedy was repeated in imagination; and no sooner did sleep close the weary eyes of the invalid than the bed appeared to turn completely over, and Cotgrove would awake with the last cry of his brother ringing yet again in his ears. He has never recovered his lost nerve sufficiently to face the stormy waters of the Estuary again by night; and his mates, realizing this fact, have shown their smypathy in a practical way by purchasing for him two handsome pleasure-boats.

The body of George Cotgrove was recovered, close to the Nore Lightship, a month and three days after the disaster. A knife belonging to Alfred, which had been borrowed by the deceased a few moments before and most thrilling scene of this drama the boat capsized, proved the only means of identification.

Such is the true story of the experience of a real individual. There is not a single line of fiction in the narrative, neither is it the excessively 'padded" or elaborated yarn of a longshoreman. Any of the older residents of our picturesque town will verify every detail of the story. Yet what writer of fiction would be bold enough to place one of his characters in the position of Alfred Cotgrove for a like period. Or what novelist would dare to afflict his hero with so unique a complaint as a bruised heart?-The

Wide World Magazine.

The naturalist's wife had gone out for a few minutes and left the baby in charge of her absent-minded husband. When she returned she was not a little disturbed to discover the baby crying dismally, and its father, with collection of his largest bottles of alcohol before him, evidently at his cried the good woman, snatching up but his position was mersed in still deeper water. "Edith," he said to his only daughter, "if you should learn that I was on the brink of financial ruin and might not have a penny to leave you, what would you do?" "I'd break my engagement with the English lord and marry an American," she replied promptly, thus showing that she was a resourceful young woman. - Chicago Evening Post.

First Discovery of Aluminum. The first discoverer of aluminum had the reward of genius. Pliny tel's us that in the reign of Tiberius (41 B C. to 37 A. D.) a worker in metale presented a beautiful metal cup resembling silver, but lighter, to the Emperor, who questioned him, and learned that he had extracted the new metal from clay. The secret, he said. was known but to himself and the gods. The sage Tiberius reflecting that if this metal could be made from earth it would lower the price of silver and gold, decapitated the artificer in order that his secret might remain with the gods, and so deprived the world of a most useful metal for eighteen centuries.

An example of the high develop-

ment of the social instinct in birds has recently been communicated to the Asiatic Society of Bengal. A young Indian sparrow hawk, which had been trained to catch various birds, was sent after a party of "seven sisters" (the jungle babbler) feeding on the ground. One was readily caught, but the rest of the flock returned to the assistance of their "sister," and after a sharp and fierce conflict compelled the hawk to relinquished the grasp or the victim. Mr. B. B. Ormaston, who communicated this phenomenon, states also that he has had the same result whenever he has flown a shikra at a group of babblers.
