business will kindly bear in mind that there is an era of Anglo-Saxon amiability which ought not to be disturbed.

An authority states that there are 7,000,000 harmonicas sold annually in this country. Is it any wonder that some persons look on a musical taste as a not unmixed evil?

Crime costs London more than \$7 .-500,000 a year, over \$6,000,000 of which goes to the Metropolitan police. This amounts to something like \$1.50 per head of London's population for their sins.

There is something grotesquely curious in the news that Sir Herbert Kitchener began recruiting from the captive Dervishes for his army the day after the capture of Omdurman, Of course, the curiosity lies in the nature of the Dervishes and the fact that such a thing is possible. The fact is that many of them are mere soldiers of fortune, who fought for the Khalifa simply for hope of plunder, and are as willing to fight for the Queen and the Khedive as for anybody else. But the incident is most impressive as showing Great Britain's policy of making every country which she controls do its own fighting. England furnishes the generals, but she enlists the Egyptians in Egypt, the Soudanese in the Soudan and the Sikhs and Goorkhas in India, and adds a few regiments of British troops, just enough to drill and encourage them.

The four monitors for which contracts have been awarded by the Navy Department will be in effect small floating batteries, designed to stick close to our coastwise harbors. They will be too small-only 225 feet long -to carry sufficient coal for a sea voy age, nor is it designed that they should at any time take the places of any of our warships in offensive operations at a distance from home ports. Vessels of the monitor class are believed by naval experts to be practically impregnable to hostile attack, except by torpedo boats, while they are capable of meeting in a sea fight anything affoat in the shape of a battleship, no matter how large or how avily armed. As movable auxiliaries to our elaborate but widely scattered coast defences the new monitors would be of great value should our coast line ever be menaced by a hos-

Mr. Kerr, the Secretary of the United States Golf Association, estimates that there is \$50,000,000 now invested in golf in this country, and that the expenditure this year for that sport will not be less than \$10,000,000 The money is well spent, in that it makes this country pleasanter for persons who are bound to have some sort of sport, and who will seek it abroad if they cannot find it at home. Bicycles, trolley cars and golf have worked miracles in the direction of mitigating the monotony of American life, especially of country or suburban life, and making it attractive to persons who crave reasonable variety in their existences. They are all cheap. and not one of them is nasty. They are all still extending, and it is an adventurous prophet who would attempt to predict the limits of their spread. With iron cheap, and growing constantly cheaper, Life predicts that there must be a continuous stretching out of trolley rails along the country roads.

The great waste and damage to a country's industries involved in a reat strike is well shown by some lately published statistics of the losses caused by the strike of the Welsh miners, which ended recently, states Bradstreet's. This cost is placed at \$30,000,000, or \$1,500,000 weekly during the period the strike lasted. If the damage were confined to the mining industry itself this would be bad enough, but the interdependence of modern trade and commercial life made it necessary that a wide circle of industrial workers and enterprises should drink from the same cup. For instance, it is esti. mated that the loss in coal freights alone was fully \$7,000,000, while the losses of the railroads are placed at fully \$2,000,000. That the wages of sailors, the amounts paid for dock dues and other fairly measurable items were heavily reduced goes almost without saying. The indirect loss, some of which may never be regained, caused by the diversion of the coal trade to other countries is, of course, incalculable, but the decided boom given to American export trade in coal to British colonial ports is of too close a date to be forgotten. It has even been stated-though, it is claimed, without adequate foundation -that the annual autumn maneuvers of the British Channel fleet were post poned because of the strike.

ADVENTURES AMONG CANNIBALS

The Strange Story Told by Louis de Rougemont.

count of the

king of a cannibal tribe. He says he vancement of Science, at Bristol.

M. Rongemont's tale has aroused unusual interest. It is said that his story has been investigated by famous standing that he received an invitais the story of his wanderings as prepared by M. Rougemont himself.

In the year 1863 I left home, a mere venture on board the Dutch schooner between the Australian coast and grees east, off the northwest coast of started. Australia. I was absolutely alone, favorable winds, we set out together the handiwork of a white man. Cambridge Gulf, on the northwest granite. coast. Of course, I made many exeither overland or by sea. Evidently, however, I drifted into the centre of

When we were perhaps seven months out we came suddenly upon even the exact outline of Australia, it four white men. At this time we were with a small party of blacks, who were journeys and years of suffering. As I on a punitive expedition. The party have already said, I landed on the had already been attacked by these east side of Cambridge Gulf, as nearly same white men and had retaliated, and, therefore, they were by no means disposed to be friendly. Naturally, in the excitement of the moment, I in the excitement of the moment, I for curious stones. In a great many forgot that I was virtually a black of these watercourses I found both man myself, and rushed upon them, I now know them to have in alluvial gold. been the Giles expedition of 1874. I sequence of the introduction and should point out that I was perfectly naked, like the savages, and was anointed with the same protective covering of black, greasy clay which is used by the natives to ward off cold and the attacks of insects, but apart from this, the sun had long since tanued my skin out of all resemblance to a European. Repulsed in this way more than once, I despaired of ever making my real character known, Two or three weeks after the encounter my wife came upon the tracks of a man whom she described as a white man, and as a man no longer in his senses. She deducted this latter fact from the eccentric circles which the tracks followed. Following up these tracks, we did find a white man pieces. tunately, lost in an encounter with a alone and dying from thirst. He was hopelessly imbecile. He lived with brance, and never regained his intelligence until just before he died. He asked who I was, and where he

finding water and procuring food, I seemed doomed to disappointment at length met a party of prospectors water. - The Outlook,

The people engaged in the scaling was with the scaling with the scaling was north of Mount Marga, the self to return to civilization, and nearest camp. partly, also, on the urgent solicitations of my wife and the tribes with whom I lived. They pointed out to me that and that I could be King among them. I ultimately became King or ruler over a number of large tribes. From this mountain home I made frequent time or another a great part of the in-

terior of the continent. Once I followed on the camel track came upon an Australian newspaper. ties I got back to Europe. I remember it was the Sydney Town and Country Journal, bearing date somewhere between 1874 and 1876. It was a surprise indeed. I read it over and over, until I had learned it by heart, and I preserved it in an possum skin cover until it was literally worn to pieces.

Much of the information this newspaper contained puzzled me greatly, and I nearly worried myself into insanity over a statement that "the deputies of Alsace and Lorraine had refused to vote in the German Parliament and had walked out." Turn it over how I might, I could not understand how the representatives of two great departments in my own country could possibly be in the German Parliament-knowing absolutely nothing, of course, of the war of 1870.

The tribe over which I reigned was composed of beings who were certainly low down in the human scale, but at the same time they have elaborate laws which govern their daily life precisely as in the case of civilized people. They are savages, repulsive in appearance, who have not even risen to such a point of civilization as to have permanent houses, abdicted to cannibalism, and altogether of a very

degraded type. While my natives did not, as a rule, paint the body on great occasions, such as corroborees, initation ceremonies and other festivities, they paint anddecorate themselves elaborately, each tribe having its own design of decoration, and even a geometrical design for each ceremony. The pigments used in decoration are of many colors, but chiefly yellow, red, white and black. Ordinarily the only clothing known consists of a coating of greasy clay, mixed with charcoal. This serves many purposes. It keeps off the cold during the winter, and is also a pro-In summer a special kind of pigment is used to keep off insects, and this material is scented with a kind of pennyroval.

Cannibalism prevails to a very great extent, but is governed by many rules. Usually it is the slain victims in battle that are esten by the victorious side, and as the object seems to be to acquire the valor and virtues of the pertribes from cannibalism by assuring man's hair, they would achieve their end equally well. When a family grows too large, and the mother-being the beast of burden-is unable to carry one of the children, the father orders it to be clubbed and eaten. This, however, is entirely actuated by love, as the natives have a horror of children are also killed and eaten. Women and people who die a natural death are never eaten. When a man has to be eaten there is always a grand corroboree. The natives are not ashamed to confessed cannibalism, nor is an individual considered unclean

From this account it may appear that my natives were not a pleasant people to live among. But I found the reverse to be the case. They were always cheerful, obedient and deferential in their manner, and many times did I owe my life to the care exercised by my faithful native wife. It was possible to devise many occupations, which were at least sufficent to pass the time. For amusement I used to search the beds of the watercourses coarse and find gold, and in some in-

I found great quantities of gem stones of every shape and color, which could be distinguished by look- and agglomerated with pitch. ing through them when wet. In some cases the prevailing color of the stones others blue, and in rarer cases green. This I took respectively to be ruby, baryta, which is finally converted into sapphire and emerald. On occasion I barium carbonate or sulphate, both of came across a range of granite hills extending several miles, and the adjacent creeks contained large quantities of pieces of broken reefs and lodes and water-worn pebbles, also given to a gentleman as a pet. Beavimmense quantities of heavy black

Taught by bitter previous experi-

ence, I knew that before I could appear among the whites I should have I hal everything a man could want, to get some of my natives to procure some clothes for me by any means It was, moreover, quite evident to known to them. When at length I them that my fellow white men did presented myself before the white not want me. Thus for something men I was afraid they did not at first like twenty years I made my home look with favor on their guest. I anwith them in the mountainous region | swered their questions, and when they near the centre of the continent, where heard I was without mates and had been journeying hither from the interior for nine or ten months they were convinced I was a person of long journeys and traversed at one intellect. A question of my own, "What year is this?" convinced them altogether that they were right in their conjecture. However, in the of a white party with the tribe for the end I obtained help and work, and in purpose of picking up empty tins and 1895 I reached Melbourne, whence by for other things useful to us, and I slow stages and not without difficul-

ROOFING A FARM.

Remarkable Precautions to Protect California Orchard From Frost.

Frost is a frequent feature of orange growing in California and many devices for keeping it from harming the orchards have been tried from time to time with only partial success.

During the day the earth and trees become warm, but as the night cools the atmosphere the process of radiation sets in and the heat from the earth and the trees is carried off, the cold, frosty atmosphere taking its place. This warm air must not be allowed to escape. The fact was evident that the trees must be covered.

A fog would do this effectually, but fogs cannot be manufactured to order. The idea was conceived by a Mr. Everest of covering the orchard with canvas, which could be rolled up in the morning and let out at night. One acre was covered in this way and it was found to be expensive and unstable, as the canvas would get wet and decay. Then Mr. Everest thought of a covering of leather, and it was tried, was a success and to-day is an accomplished fact.

A visit to this ranch would remove any doubts one might have regarding the feasibility of the new plan. A dial set in the ceiling of the house at the head of the stairs indicates the direction of the wind at any time of the night or day. At another place cau be seen a system of electric bells. These ring when the thermometer has fallen to a dangerous temperature, The men are then called up and a process of firing up is commenced. And yet with all these precautions the frost has often been too quick.

Now the trees are roofed in with canvas and laths. Although this shelter has been used over but fifteen as soon as the work can be done. Last spring the fruit which was covered matured perfectly, while that uncovered was more or less injured. The operation is perhaps considered

an expensive one, but when the value of a crop is considered it is infinitesimal. The cost is about \$400 to the acre. It has been demonstrated that the temperature is some five degrees son eaten I endeavored to wean the higher under the cover than outside, with no fire at all, while with a small them that, if they made bracelets, fire the temperature can be brought up eight degrees higher. With this cover the rancher is absolutely sure of a crop from any citrus orchard .-San Francisco Call.

SCIENTIFIC AND INDUSTRIAL.

Flour molded into bricks by hydraulie pressure is reduced two-thirds in natural decay. Maimed and deformed | bulk, and rendered proof against damp. By means of a toughening process, recently discovered, glass may now

be moulded into lengths and used as railway sleepers. Cast iron is now being used for stills for concentrating sulphuric acid, and it is confidently anticipated that it will supercede both glass and platinum

or that purpose. M. Victor, the French naturalist, says that a toad will live twenty-eight months completely embedded in plaster of paris poured on as a liquid, and then allowed to harden.

Guttapercha from the leaves of the caoutchouc tree is now being used by French makers of submarine cables, It has all the advantages of the product from incision into the tree, while less expensive and more durable.

A new kind of carbon for arc lamps is reported to have been patented in but they promptly fired upon us and stances the creeks were extremely rich Russia. It is made from ninety per cent, of very pure carbon and ten per cent. of carburet of silicium, the ingredients being very finely pulverized

To increase the durability of lime stones used for buildings, a French would be various shades of red, in engineer proposes to coat their surfaces with a solution of hydrate of which are hard and insoluble.

ladies wore diamonds."-Jewelers' Weekly. Mr. Borecastle-"At last I came to a place where it was so steep that it would be hardly safe even for a donkey to go down-so I turned back." Mrs. Downshire Tall-"Why?"-

He-"Stop! We can't sit down here-this is fresh paint." She (tearfully)-"I fear you don't love me blindly. If you did, you would never have seen the paint."-Fliegends Blactter.

Brown-"But why do you stop so often? Can't you keep up with me?" Typewriter (who is rather shaky in her orthography)-"Oh, yes, but your language is so eloquent that I frequently find myself spellboand."

"Well, Johnnie," said the minister to a little boy, "I hear you are going to school now." "Yes, sir," was the reply. "And what part of it do you like best?" asked the good man. "Comin' home" was the prompt and truthful answer. Mr. Bilking (looking up from the

paper)-"The eminent physician, Dr. Greathead, says there is no exercise so conducive to health in woman as ordinary housework." Mrs. Bilkins -"Huh! I'll bet he's married."-New York Weekiy. Papa-"Now, Johnny, I have

whipped you only for your own good. I believe I have only done my duty. Tell me truly, what do you think yourself?" Johnny—"If I should tell you what I think, you'd give me auother whipping."-Boston Transcript.

Citizen-"I hear Mr. Officeholder is dead." Statesman-"Yes; he died five minutes ago," Citizen-"I dislike to show any unseemly haste, but I desire to put in my application for appointment as his successor." Statesman-"Walk into the other room and take your place in the line."-New York Weekly.

Quaint sayings and doings characterized the children who attended the vacation schools which were open daring July and August of this year, Particularly when the little ones were taken to the country-there was an ex cursion each week-were they a source of delight to the directors and teachers of the schools. Many of them had never been on a street car, a trainor a boat, and the commonest sights of country life were wonders to them. Here is one of the incidents of the first trip, which was to Lincoln Park. One of the boys, seeing a chicken,

asked: "Teacher, wut's dat t'ing?" "That is a chicken, It's tha" "Wot yer givin' me? Dat ain', my chicken. Its got fedders ou. I know a chicken, I guess. My are she be t.a. chicken oncet for dinner, 'n' it dista' hev nut'in' on but akin "- Chicago
