Selling

# Wall Paper

at Dry Goods Prices.

. Do you realize what this means? Do you know that this department store system of ours brings the cost of all grades of wall paper down to half what the regular stores charge !

This may seem like an exaggeration, were we not able to back it up. We are the largest buyers of wall paper within a radius of 100 miles. We buy cheaper than most dealers and by selling at our department store basis of profit we can undersell our competitors fully 50 percent.

If you have any papering to do this spring, it will pay you'to run down and get our prices. We pay railroad fare on all purchases of \$10 or over, so you can trade here without extra expense and save enough to pay for your time thrice over.

To Encourage Early Buying We Are Now Selling.

A Lot of 5, 7 and 8c papers at 2c roll A Lot of 10, 12 1-2 & 15c papers at 5c roll A Lot of 18, 20 and 25c papers at 10c roll Inflammation of Stomach and Liver

We have under contract a staff of competent paper hangers, and are prepared to give estimates on all kinds of

# Carpets---The Opening Sale.

February brings the news Carpetings, and prices with-out a parallel in the history of this store. Clearance time is over and done for, and the choicest products of the best Carpet makers in America come forward for first showing.

Over 200 New Patterns of Carpets, a Quarter to a Third Under Price.

We never had so many patterns for choice at the season's beginning. We never had such rich and beautiful carpetings. Orders were given months ago when prices were lower, and special concessions even on those low prices were made on account of the magnitude of our orders. We have clipped a big slice from our usual profits, too, to make the offerings for this great opening sale.

### IMITATION JEWELS.

VENEERED DIAMONDS AND GEMS OF FINE COLORED GLASS.

Some of the Modern Tricks of the Trade-Fine Gold Settings Used For Bogus Stones-The Halo Around a

Although the imitation of jewels has been practiced for a century or more there are comparatively new developments in the industry every few years, and the business has of late attained enormous proportions. The majority of these stones are made abroad, and hence price. they are imported. But while they are exceedingly cheap and the duty is low the attempt is occasionally made to smug-gle them into the country, and a seigure Again, the imitation is some times so good that even the customs offiis always possible for an expert to tell the difference if he has sufficient oppor-

tunity to apply the proper tests.

Imitations of the diamond, topaz, emer old, amethyst and turquoise are usually made of paste or strass, which is nothing more than a particularly fine grade of class, to which, if the stone is colored, the proper hue has been imparted by the addition to some mineral substance. There is at least one European house, though, which professes to add carbon to greater hardness than would otherwise

In London still another plan is pursued to improve the paste diamond. Genuine diamond dust, produced by the cutting of jewels, is treated with acid, reduced to a plastic state and then rolled out in exceedingly thin sheets. This vencer is cut into the proper shape and cement-ed on the faces of the strass. Glass diamonds can be bought for a few cents when unset, but a veneered diamond is worth nearly \$1. A high degree of skill is required in its preparation.

There are several methods of distin-

guishing between a true diamond and paste. Hydrofluoric acid will eat glass, but will not affect the genuine stone. file makes no impression on the latter either. Finally a real diamond contin-nes to glitter when immersed in water. Some artificial rubles are of paste; others have the same composition as the genuine stone, which consists of corundum. The latter variety of imitation raiby has the proper hardness and spegravity, and the color is faultless.

It can be distinguished from the true ruby only by a powerful magnifying gluss. Singularly enough, the genuine article is identified by its defects. There are natural flaws in it not found in the imitation, although the imitation also possesses other characteristics (minute bubbles, for instance) which are readily ed. On some stones, like the topas and emerald, it is not wise to a file. They are not hard enough to re-sist it. The magnifying glass is the surest means of ascertaining the character

Owing no doubt to the fact that pearly are often worn in strings instead of sin-gly or in pairs, like diamonds, the busiof manufacturing imitations of them is far more extensive than any kindred branch of the industry, except perhaps
the making of bogus turquoises and emersias and ribies for belt buckles. And
industries for belt buckles. And
brought him to his death? "Don't cry,
mamma," he said after his crushed legs
had been amputated. "It wouldn't be the for anybody to buy them. Thus one may get a card bearing a dozen stickpins. And, with his hand clutching his mother.

There are several kinds of implation pearls. One is a glass bead filled with composition. The glass is aften not ove a sixty-fourth of an inch thick. Ther one looks very much like paraffin. One looks very much like parathin. A bead filled with that material would crush easily. In other globular pearls, pierced for stringing, a harder substance is employed. There is an imported initation pearl whose shell is said to be made of fishskin and whose filles is of fishskin and whose filling is a compearl, the lustrous lining of the oyster shell, wherein the real pearl is produced. This sort of jewel costs a dollar or two and a string of 60 would sell for \$150. Real pearls of the same size and beauty would bring fully a hundred times that

Although the manufacture of imitation

pearls was long confined to Europe, it is ow conducted in this country also, New York house, the first to engage the business, introduced a novelty to t trade a few years ago. It made solid pearls in addition to the filled ones. The composition employed is as hard as rock.

It is almost impossible to break these
jewels, and their luster, color and ingenious irregularity of form will deceive any one who does not use a magnifying glad on there. The head of this house tells many amusing stories about the mistakes made by expert jewelers and pawnbro-kers when these stones first made their appearance. Of course it is not easy to fool an experienced person; still the ex-pert must use a powerful lens in order to nscertain the real character of a pearl. He will not trust the naked eye. Occa-sionally a jeweler will say: "No. I cannot detect an imitation pearl eight or ter feet away, but if I hold it in my hand can see the difference between that and the real thing. There's a sort of holo around the genuine arficle which is un-mistakable." But other men in the trade frankly admit that only by means of a microscope can they distriminate

A fashion has sprung up of late years which enhances the deception produced by imitation jewels. If a paste diamond is set in a brass ring or an imitation pearl is mounted on a German silver pin, a sharp eyed observer might suspect the ting is of 14 carat or 18 carat gold and the numufacturer has lavished more or less artistic skill on the design of a ring

or stud or clasp a different impression is When one first gets an idea of the enormous extent to which imitation jewels are sold and worn, he naturally wonhas been affected. But a little inquiry it the proper quarter will satisfy him that it has not. The former are purchased by a class of people who cannot afford the latter.—New York Tribune.

To Clean a Leghorn Hat.

Stir a tenspoonful of powdered sulphur into the juice of a lemon. Brush this thoroughly into the hat with a toothbrush and when clean place it under a tap and let water run over to free it from the sulphur. Dry in the air out of the sun. Brush over with the white of an egg. True to His Chum.

It might have been a mistaken idea of boyish honor that prompted him to do it, but who could but admire the spirit of the little fellow who while he lay dying in a New York hospital refused to with initation pearl heads for from 10 tightly, the bey who was true to his to 15 cents. If the stones were genuine, they would be worth from \$100 to \$200. tightly, the bey who was true to his chum even to death passed away.—Lesting weekly.

# BAROSMA.

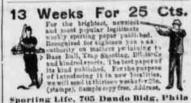

#### THE GREAT KIDNEY AND LIVER CURE

Is perfectly harmless in its effects and pleasant to take. Thompson's Barosma cures by gently stimulating the liver and kidneys to excrete from the system all particles of matter that are poisonous, not only to them, but also to the stomach, heart, blood and other organs of the

Barosma cures are permanent. When the liver is torp d or inactive the whole system must suffer, undergoing a process of slow poisoning; the stomach is filled with carbonic acid gas, inflaming the micous membrane or coating of the stomach, causing heartburn, palpitation, indigestion, latter taste on rising, a dul neavy sluggish feeling, a desire to sleep fullness and dizzy headed less. Thomp son's Barosma is an excellent stomach tonic, assimilating with the food neutralizing the acids and carrying the bile from the liver. If the bowds are costive or in liver trouble, Thompson's Dandelion and Mandrake Pills should be vegetable, and will not gripe,
