WIRELESS IN PUBLIC SCHOOL.

Two Detroit Boys Install Apparatus Which Works Well.

Harry Stewart and his chum, Royal Bolger, have provided the annual training department of the Franklin School in Detroit with something which few if any other schools in the United States possess at the present time. This is a complete wireless telegraph outfit capable of receiving and sending messages over long distances, according to the "American Boy." Stewart is 14 years old, while his chum is a year younger.

For a long time these boys have been interested in wireless telegraphy and Stewart has had a wireless outfit in his home for the last eighteen months. These boys conceived the idea that it would be both instructive and interesting to provide their school with this apparatus, and after considerable argument induced their principal and the Detroit school board authorities to permit the installation. Not only did these boys put in the apparatus but they made in the annual training department of the school all of the woodwork which the wireless requires. Harry declares that they have caught messages from Cleveland and Toledo and that the school apparatus has a capacity of sending over seventy miles.

How an Old Hunter Cooks Wild Ducks

Many persons imagine a wild duck should only be roasted or baked, whereas that is the poorest and most unsatisfactory method of all. Nine times out of ten a baked wild duck comes to the table dry shrunken. There is nothing but the flavor and a little meat on the breast and thighs left.

A better way is to joint two or three ducks (three to five if they are teal or butter ducks) in small pieces, put in a pot with pickled pork, sliced short, and one good sized onion to the duck. Salt to suit the taste, and set on slow fire, where they should stew gently four hours, never less than three. After this has cooked down to a sort of broken pot roast the whole will be found succulent, juicy in dressing ducks and all wild game the better.

Deserving of Promotion.

Sol Gage, superintendent of transportation, recently recommended a man in the Lake Shore's employ for an increase in pay. Mr. Gage and this employee engaged in some correspondence over a technical detail of some transportation regulation. In reply to Mr. Gage's third letter this letter came:

"Instead of clarifying the situation your letter of yesterday serves rather to obfuscate it."

"Any servant of a great corporation who can use the word 'obfuscate' and use it right, deserves more than \$50 a month, and I am going to see that he gets it," says Mr. Gage.—Cleveland Leader.

Window Display Forms.

New in fixtures for window display are for women's waists and for men's and women's hosiery, forms that are made not of wax or other opaque or solid material but of glass. By day these forms are used just as any similar forms would be, by night they are lighted up by electric lights placed within them, the glass of which they are made being frosted to diffuse the light evenly. Thus illuminated these glass forms show the goods displayed upon them, in pattern and color, even more strikingly by night than by day.—New York Sun.

The Push Man Train.

One of the quaintest sights in Japan is the "push man train," a little rail way which runs for nine miles along the seacoast between Aiumi and Odawara, taking four hours to complete the journey.

Each car is hauled and pushed up hill by coolies and then allowed to run down the next incline by its own momentum, the coolies jumping on behind. When skirting precipices and rounding sharp curves this becomes somewhat exciting, the sensation is rather like being in a runaway switchback car.

Typoid Fever Specific.

A Cape Colony (South Africa) doctor has recently been experimenting with a new drug in the treatment of typhoid fever. It is an extract of the plant called monsonia biflora, and contains, besides tannic and gallic acid, an active principle or principles which Dr. Maberly has named entericin. The result of the doctor's experiments seem to indicate that entericin may be a useful remedy in typhoid, but his cases have been too few to justify any definite conclusions.

Bantam Hen Quail Brood.

Lee Botts, son of Dr. A. T. Botts of Glasgow, had five almost full grown quail that were hatched and raised by a bantam hen. They imitate chickens in all of their habits except to go on a pole to roost. The mother's repeated attempts to induce her flock to observe the customs of fowling have failed, and she goes with the quail to a corner of the henhouse, where she hovers them all night.—St. Louis Globe-Democrat.

The heaviest rainfall ever recorded for a single day on the isthmus of Panama occurred during the great flood of December, 1910, between the hours of 10 a. m. December 28, and 10 a. m. December 29, when the rain gauge at Porto Bello showed a fall of 108.6 inches. The total fall for the month was 58.17 inches, which is equal to an average rate of nearly two inches a day.

Signs of the Times.

"I see the young lady next door has a beau." "She assures me that it is purely a platonic affection." "In that case you had better look over something cheap in clocks, or something of that kind."

Having an Ideal Means Much.

"Your circumstances may be un congenial, but they shall not long remain so if you but perceive an ideal and strive to reach it. You cannot travel within and stand still without."—James Allen.

SIZE OF THE STRONG LADY

She is Almost 5 Feet 10 Inches Tall and Weighs 210 Pounds.

New Yorkers who have been taking the children to the circus and who noticed a somewhat solid lady by the name of Sandwina flipping a mere man up and down and casually holding him at arm's length by the scruff of his neck may be interested to know something about her.

Her measurements are: Height 5 feet 9 3/4 inches; weight, 210 pounds; shoulders, 16.2; chest depth, 38.8; hips, 15.3; neck, 14.9; normal chest, 33.3; expiration, 40.8; inflated, 44.1; waist, 29; hips, 43; right thigh, 25.2; left thigh, 24.8; right calf, 16.1; left calf, 16.2; right biceps, 12.6; expanded, 14; left biceps, 12.6; expanded, 13.7; right forearm, 12, and left forearm, 12.

According to "Leslie's Weekly" these measurements are absolutely perfect so far as relative proportions go. Frau Sandwina, who was born twenty-five years ago and is still as strong as the other woman of her age, has never been ill a day in her life.

How He Killed a Caribou.

"The only caribou that I ever shot," said Dr. Oscar H. Sellengens, "came my way in a somewhat peculiar manner. I was up in the New Brunswick country for big game and my guide and myself had tramped about the country for hours without seeing any. We were going through the woods when the guide remarked, 'Well, just in the spot where you are standing a doctor from Boston got a caribou last year. Maybe we'll see one now.' The guide had scarcely got through talking when I happened to turn around and there was one of the big animals tramping along, but beyond gunshot. He was coming my way, however, and I prepared for him.

"I aimed between two trees and just as his head appeared, fired and he crashed down and was dead when we got to him."—Columbus Despatch.

The First Champagne.

When champagne was first introduced into England it was still red wine. How to make it sparkling and effervescent was the invention of Dom Perignon, a Benedictine monk of the Abbey of Hautvillers, who died in 1715.

The secret was discovered about 1692 and revolutionized the trade of the district. Whether it was entirely the old monk's own invention has been called in question, but it is certain that he was the first to use corks for closing the bottles of wine, which up to that time had been stopped merely by hemp soaked in oil. Not until the end of the eighteenth century did the sparkling wine become favored in England.

Byron's Grammar School.

J. Pittendrich Macgillivray, sculptor has informed the committee that he will have the Byron statue for Aberdeen completed by June, 1913, so as to coincide with the jubilee year of the Grammar School's entry on its present buildings.

The poet was a pupil at the Grammar School when it stood on School-hill. The figure, which is to be of bronze, will be nine feet high and placed on a granite pedestal twelve feet high. The movement for a statue to commemorate Byron's connection with the seminary was originated by Dr. Morland Simpson, the present rector.—London Globe.

Founder of Anti-Treating League.

Dr. W. H. Cocker, J. P. of Blackpool, who died recently, was the founder of the Anti-Treating League. "Pay for your own drinks," was the doctor's motto in founding the Anti-Treating League. "I believe," Dr. Cocker would say, "when men pay for their own drinks the consumption of alcohol will greatly diminish. The treating evil is greater than drink itself, because the man who is treated is always expected to treat back. If we stamp out treating we shall have done something to make England sober."—London Evening Standard.

Monster Gar in Ohio Creek.

Thomas Q. Pringle while fishing in George Dohr in Deer Creek near Mount Sterling recently pulled out a monster gar three feet long. Mr. Pringle slashed off the head from the long, snake-like body and preserved it as it is a decided curiosity, a gar of that length not having been taken in a hook in that vicinity for years. The cruel jaws with the needle-like teeth are about four inches long and the coloring of the head is most beautiful. It is a light gray or silver and is handsomely tinted with purple flashes throughout.

Celluloid Collars for John Bull.

White celluloid collars, shirt fronts and cuffs, are selling well in Manchester, and Vice-Consul John W. Thomas thinks that the trade should prove attractive to American manufacturers. The English workingman with a family finds in these articles a great saving both in washing and durability. The retail price averages 12 to 16 cents each, the manufacturers having their own retail stores.—Daily Consular and Trade Reports.

Killed Big Turkey in Kentucky.

E. D. Polley, a farmer of the Lime Fork Creek section of the county, killed one of the largest wild turkeys, a gobbler, shot in the mountains in many years. It measured five feet and ten inches from tip to tip and weighed twenty-three pounds. The first was an exhibition in the 10-day home.—Whitesburg correspondence Louisville Courier-Journal.

Putting it the Wrong Way.

"Many a speaker is landed as 'having a fine command of language,' of whom it might better be said, that his language has a command of him." He has the same 'command of language' that a rider has of a horse that is running away with him.—Whately.

Be Ready for Opportunity.

"There is scope for chance everywhere; let your hook be always hanging ready. In the eddies where you least expect it, there will be a fish."—Ovid.

Suits to Order, \$12.50 to \$35.00.

Shirts to Order, \$2.00 to \$12.00.

There Will Be

At least one time this coming summer when you would give your very life if you were sure your clothes were absolutely right. Why then do you want to take chances? Buy
