SHAFT COUPLING!

THE principal objections to most of the Shaft Couplings now in use are that they necessitate a great deal of labor in changing from Shaft to Pole, or vice versa. It generally takes from twenty minutes to half an hour, besides one wrench, and sometimes two must be used. It is also a well-known fact that the nut on the bolt of the old style couplings will not stay on if the Pole and Shafts are changed frequently.
 After the nut is off the bolt will come out, the Shaft drop down, and the result is a run off, a broken vehicle, or perhaps, as is sometimes the case, a loss of life.
 In offering this new Coupling to the public, the Inventor has designed to obviate these difficulties. How well he has done it, the hundreds in use themselves can testify. Its prominent feature is convenience of operation. The Pole can be taken off and Shafts put on in half a minute. No wrench used. It is perfectly secure, the bolt being driven in place and held there by a spring. Everybody who has occasion to change their Pole and Shafts should try them. They give satisfaction wherever used, and are destined to come into universal use. Simple in construction, any ordinary blacksmith can put them on. Volumes of testimonials can be produced if necessary.
