## FARM & KITCHEN. Preserving Fruit without Sugar.

We have received numerous applications for information about the modus operandi of putling up fruit so as to preserve it in a fresh state, without cooking, packing, drying, or packing in sugar. It is a business that cannot be so well done, as in farge manufactories where every thing is arranged for conveniences but still, with a little experience and careful attention every family can save enough of the various fruits of the season to furnish

their tables with a great delicacy during that portion of the year, when they can get nothing of the kind. The whole secret consists in expelling the air from bottles or cans, by heat, and then sealing up the contents hermetically. If the article to be preserved is peaches, select such as you would for sweetmeats, and pair and cut them so they can be the least possible delay, or they will be colored by the atmosphere.

Some persons who want them to retain their natural whiteness, put them under watand wire down the cork with very little projection above the glass. When you have boules enough to fill a kettle, such as may be appears to be full of steam-the atmosphere having been forced out through the cork. As soon as the bottles are cool enough to handle, dip the corks in sealing wax so as to cov-

er them quite tight. An additional precaution is used by some in putting tin foil over the wax.

Another plan is to cook the fruit slightly in a kettle, and then put it in cans or bottles, and pour hot syrup of sugar to fill up the interstices, and then cork and seal-the heat of the fruit and syrup answering to expel the air. But the less they are sweetened, the more natural will be the taste, like fresh fruit, when opened. We have eaten peaches a year old that we could not tell from those sugared an hour before.

Tomatoes are very easily preserved, and rctain their freshness better than almost any other fruit. The small kind are only used. Scald and peel them without breaking the flesh. Bottles should hold about a quart only, because, when once opened, the contents must be used up at once. Bottles made on purpose with large throats, and a ring on the inside, are the best, and bottles are better than cans for all acrid fruit. The cans, however, are more easily secured by solder than the bottles by cork and wax, as the air is let out through a small puncture after the large opening is soldered up and cans heated, and that hole stopped with a single drop of solder.

Every article of fruit will keep fresh if the nir is exhausted and the bottle sealed tight. The least particle of air admitted through any imperfection of the sealing will spoil the fruit. If the air could be driven out without subst there may advertisements inserted at a rea isonable discount on the foregoing rates. heat, there would be no need of any cooking, and just enough should be given to expel the air and not change the taste. Many persons prefer to add syrup made by about one pound of sugar to a quart of water, to all suitable

of the country, beside the great amount of fertilizing matter in water at all times. The windmill could be used too for all grinding of grain for farm use, driving the washing machine and churn, pumping the water from the well or spring matten one of the hardest kind of labor about the house. Liquid manure and the solid excrement made of liquid could be sent to a field through leading pipes by the same power.

such a drought as prevails now in many parts

#### The Potato Discase.

After a series of lengthened investigation upon the subject by several members of the British Meterological Society, the following conclusions were arrived at :

That the vital energy of the potato is un mpaired, and that it never becomes diseased until the stage of flowering, which is about one hundred days; or about three months from the time of planting; that the cause put in the bottle, and you must do this with are simultaneous in their action over a large tract of country, and at greater distances, and are peculiar to the soil and air. The

cr.-When the bottle is full, cork it down are moist and clayey; and of the latter barometrical and thermal state, and hygrometical condition, with southern directions of the wind and atmospheric zone. That the object most convenient, put them in and boil with water all around up to the nozzle, for about fifteen or twenty minutes, or until the bottle economize the vital power of the plant at the dry, is now prepared to manufacture most kinds of time of flowering; and the removal of the flower before the formation of the seed would Mill Cranks, Mill Gearing, Slides, Balseem to contribute to this end.

> WHEY FOR PIGS. - A neighbor, extensively engaged in the manufacture of cheese, uses

the whey of his dairy, with an admixture of meal from corn, oats, and grain that he has to spare, as feed for his pigs, and thinks that they thrive upon it very much indeed. The meal is sometimes stirred into the whey in a raw state; at, other times it is boiled in the whey, making a thin pudding; and at other times still, the whoy is heated and poured upon the meal and then stirred. A little salt is used in the latter modes of preparing this food, about as much as would make a pudding palatable to human beings. Do not many waste their whey? Might not those who make cheese on a large scale, make the raising and fatting of pigs an appropriate ac-companiment to their dairy business.-Coun-

STOYES!! STOVES U THE KING OF STOVES NO ? 8 Q f 너 뇌 胷 M e Ņ M Þ 片 閞 0 Ħ Z Ħ H H Q Ľ) Ô IF WRITE #4

Among the approved Stoves of the age I am thoroughly convinced that the KING OF STOVES intraly named, and must take the lead of all Elevated OvenStoves. The principal advantage claimed in this, over all other stoves, (Elevated Ovens in particular,) is in its diving or reverting flues, the exclusive right of which is guaranteed to the subscriber by Letters Patent from the United Sintes. There being two currents of air passing up and down at the same time on each side of the oven, perfectly enveloping the oven in a current of hot air that cannot escape short of traversing a distance of about twenty feet, all told, making

#### THE MOST PERFECT BAKER

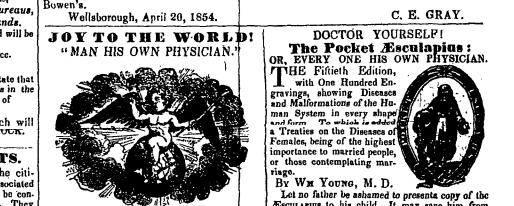

that can be desired. It has a perfect draft and flues easily cleaned out. There is a damper so constructed as to give a direct draft where heat is not wanted for baking or wnrming. The amount of heat is immease for the quantity of fuel consumed. The Four Boiler is properly a Village Stove, and works well with wood or coal. You can get a meal for ten persons in thirty-five minutes, with seven pounds of dry maple wood. Its appearance is grand, and it is a very pleasant stove to do work with. It is very appropriate for large sitting or dining rooms, and warms with less fire than any parlor stove. The Six Boiler King works equally well, has more capacity, and is adapted to the wants of large families and public houses. This s, in truth, a FARMER'S STOVE. What can you desire in a Stove that cannot satisfy? If you want capacity for do-ing large business, you have it. If you want to warm cold houses or large rooms, it can-

not be beat. Draft good, and will burn much or little wood as may be necessary. If you want to enjoy the greatest blessing that science has ever rendered accessible in the shape of a Cook Stove, buy the King. The King of Stoves is, in fact, what the name indicates. It is the Chief of Stoves.

It does possess the long sought combination, the principle of the Low in the position of the Elevated Oven. If you want a direct deaft for boiling, you have it. It you want the revertable flue oven for baking or warming, turn the damper and you have have it in its greatest perfection.

I also intend keeping a large assoriment of Low Oven Cook Stoves, the most suitable for this section. Also, as fine an assortment of Parlor and Box or Plate Stoves as has ever been kept in Northern Pennsylvania. Ido say boldly, that I will not be undersold, and it is certainly to my credit to deal in none but the most approved of stoves. I take pleasure in showing my stock at all times, if I cannot sell.

Wanted, in exchange for Stoves, Wares, &c., old Iron, Copper, Brass, Pewter and Rags, for which the highest market price will be paid. Call one door below Truman &

TY, are second to none in the market. He will endeavor to keep on hand all articles o HOUSEHOLD FURNITURE—such as

sume them, quite unlike, in that respect the common preserves,

We have known fruit for pies put up in three quart cans, by partially cooking in an use, and putting the fruit in the cans hot, and soldering immediately. It kept thus perfectly.

Some fruits keep much better, and with less heating than others. Peas are among the hardest articles to keep; they contain so much fixed air.

We advise every family in the country to try this plan for putting up fruit for winter use, on a small scale this year, and if successful enlarge upon it next year .-- Exchange paper.

#### Self Regulating Windmill.

Daniel Halliday, a mechanic in an obscure country village, Ellington, Connecticut, has done what the world of mechanics have sought for in vain for centuries. He has invented and put into successful operation a windmill with self-furling sails. The mill built by him has five wings, that is, the diameter of the wind wheel is ten feet, and it has been in operation for six months without a hand being touched to it to regulate the sails. It run fifteen days at one time, without stopping day or night, and it has stood through some hard gales; the beauty of the improvement is, that it does stand still when the wind blows hard est, with the edge of the wings to the wind, and as it lulls they gradually resume their position for a gentle breeze. It is so contrived that nothing but a squall of great severity falling upon it without a moments warning can produce damage.

The mill mentioned, has drawn water from a well twenty-eight feet deep, one hundred feet distant, and forced it into a small reservoir in the upper part of the barn, sufficient for all farm purposes, garden irrigation, and " lots to spare." The cost of such a mill will be \$50, and the pumps and pipes about \$25. It is elevated on a single oak post, a foot square, the turn circle being supported by iron braces. The wings are made of one ongitudioal iron bar, through which run half an inch , thick are filled, holes being | pared to manufacture on short notice, and bored through from edge to edge, and screwed together by note on the ends of the rods. This makes strong; light sails : but as will of any style or description to suit the purchaser, be seen are fixtures not to be furled or clewed and of the very best materials. All kinds of rebored through from edge to edge, and screwed up ; but they are thrown up edge to the wind | pairing done forthwith and on the most reasonable by a very ingenious and simple arrangement of the machinery, which obviates the great objection to windmills for farm use the ne. cessity of constant supervision of the sails to suit the strength of the wind. Wind is un-doubtedly the chespest power that a farmer can use, and not with standing its inconstancy, if this improvement operates as well as it bids fair to in a single mill erected, it will be ap-plied to meny valuable uses. By windmills, swamps may be drained and upland irrigated a

**医**输出的 DR. PHILIP LEDDY'S DEATH-TO-PAIN

The great American Remedy for Fever & Ague, Rheumatism, Dysentery,

Cholics, and Griping Pains, Bruises and Strains, Burns & Scalds, Fresh Wounds, Dyspepsia, Coughs & Colds.

AND ALL OTHER KINDRED DISEASES

THIS Medicine has proved, and will prove an unconditional PAIN DESTROYER in all cases, whether External or Internal. Hence it has recei-ved the appropriate name of "Deuth-to-Pain." It has, by being kept on hand by families who know its value, been the means of saving money, and often life, by its timely use in sudden attacks, and in case of acoidents. In all broises and flesh wounds this Death-to-pain is the best embrocation that can be found. The soreness is immediately extracted -swellings reduced-and profuse bleeding stopped. A single dose will case the most severe griping pains in the bowels, and a few applications will case the

severest rheumatic and nervous pains. Dyspepsia and its train of diseases is driven from its strong hold. "Fever and Ague," in the language of and western agent "can't stand before old Leddy and live." Indeed it is so with nearly every discuss in the catalogue. A Mediciae for the Million!

The remedy is composed of a large number of articles, all entirely regetable, each a remedial agent in itself, yet so united as to form a most powerful in itself, yet so united as to form a most powerful combination, and to take away one of these algents would materially detract from its merits. One, and the most powerful, of these articles, is a root procured for this medicine only from the island of Taumago, in the South Pacific, called

TAYU, OR LIFE ROOT! It is used by the natives in almost every disease,

and the secret of its virtues was impa riedly the proprietor by a native. D For certificates, &c., see pamphlets to be had

Address, (post paid) DR. WM. YOUNG, No. 152 Spruce St., Philadelphia. March 16, 1854-19.

STEARNS'

Self-Setting Mill Dogs. THE undersigned having purchased the right of using the above Mill Dogs in Tioga county, would announce to the public generally that he is ready to furgish them at short notice, to. any part of the county, on the most reasonable terms, and warrant them to set correct from half an inch to two inches in thickness. They are the vhenpest and the most durable Dog m use. They are very simple in construction, consequently very aesily kept in repair. They can be used for two

saws in a gate just as well as for one. Terms, \$50.00 per sett for one saw, (the man own-ing the mill finding the headblocks and boarding

the men while putting them in) and \$55.00 for two 88.W8.

N. B .- All orders promptly attended to.

D. B. WILCOY WELLSBOROUGH, Dec. 5, 1853.

I would say that we have used the above descri-bed Mill Dogs for about four months, and our sawyers like them much and think them prefera-ble to any they have used. S. E. ENSWORTH. I have a set of the above described Dogs in my

mill, which I purchased after a years trial, and

can recommend them to do their work well. Wellsboro', Jan. 5, '54-1y. J. I. JACKSON.
