

Account From Constantinople.

CONSTANTINOPLE, Oct. 22, 1854. About mid-day the fleets stood in to engage the batteries at the mouth of the bay. It is said that some disagreement took place between the French and British authorities, and that Admiral Dundas gave in to the views of his French colleague, whose plan was adopted. At all events, the French went in and engaged the batteries on their right. The fire of their vessels was as effective as could be expected, and in better circumstances the combined fleets might have won an easy victory. But nature interposed difficulties perfectly insurmountable. The water in the neighborhood of the works on each side is shoal, and it is impossible for even a frigate to run in closer than from 800 to 1,100 yards. At such a distance the action of shot upon stone walls is only trifling. The consequence was, that although the enemy were several times driven from their guns, of which not a few were dismantled, yet the damage done to the works which guard the entrance to Sevastopol was extremely small. The precise loss of the French we have not yet learned. The Ville de Paris engaged the Quarantine battery, and after an hour's firing, the Russian gunners were driven off; they, however, returned shortly afterward and renewed the fight. At about 3 o'clock they seem to have begun to open with red-hot shot. Some time after this a shell came into the Ville de Paris, and blew away a great part of her poop-deck, killing and wounding a considerable number of men.

The English had come up within range of the batteries on the left, shortly before 1 o'clock. The Agamemnon steamed in and engaged Fort Constantine with great determination. The Britannia was towed in, I believe, by the Retribution, then followed the Arctus, Albion, and London. The Sphinx, newly arrived from the Baltic, went in firing her long range and aft guns at Fort Constantine with considerable effect, for the enemy took especial pains to be rid of her, and the shot which fell round her kept her in a continual foam. Two or three Turkish sails of the line also stood in and fired at the batteries on the Constantine side. Their practice was not bad, and the effect of their aid would have been more acceptable had they not placed themselves between the Queen and the Russians, so as to prevent that ship from engaging until she had changed her position. The British line was anchored all along the left point of the entrance, at a distance of about nine hundred yards. The Agamemnon poured in an incessant fire on Fort Constantine, and at about 3 o'clock a loud explosion took place inside, which no doubt occasioned great damage, for the Russian fire slackened considerably for nearly half an hour. But from the distance of the vessels, the shot could have little effect on the stone walls of the forts, and the British were exposed to a severe fire, not only from them, but from other batteries, the work of the last few months. It appears that the enemy have constructed a sunk battery of great power between Fort Constantine and the hill which lies further on. The effect of this, when it opened on the British line, was very great. The Agamemnon was very much cut about. The Albion received several shells close to the water-line, and was once or twice on fire. She is expected down here hourly to repair damage. The Arctus experienced nearly as much damage; her hull is very much injured. She has four men killed and twenty wounded. At about 3 o'clock the Russians had opened with red-hot shot, and it was from this that the chief damage arose, so many of the ships were on fire three or four times. The sunk battery was never injured, but Fort Constantine and the Quarantine Fort must have had many of their guns dismantled. Finding that there was no possibility of making any impression on the forts from the distance at which the ships were placed, and that any effect was only temporary, and consisted merely in driving the Russians from their guns, it was resolved to retire, more particularly as it was growing dark, and all idea of storming the place that day had been given over on account of the unsatisfactory nature of the operations on the land side.

The attack was bold, if not skillfully planned, and cannot be said to have failed, for it was only intended as a diversion, and it was discontinued when the cause for persevering in it existed no longer. So far as it goes, it furnishes an argument for those who declare Sevastopol impregnable from the sea. What was done on Tuesday last might have been done last April, and it was only the strong conviction that such an attack would fail which deterred the Admirals from the undertaking months ago. But there are other circumstances which take away from the blame of failure, if failure it can be called. It must be remembered that the fleet was only half manned, and that a large proportion of sailors had been sent on shore to join in the main operations, to which the attack only formed a diversion. The Arctus had only 15 guns out of 50, and huller crew were with the army in the trenches before Sevastopol. The British position is at such a distance from the base of operations at Balaklava, some of the guns having been dragged nine miles along a rocky road, that the labor of the sailors has been very great, and the necessity for a large number of them remaining on shore was unavoidable. It is not probable that with its entire strength the fleet could have destroyed such works at such a distance, but its fire would have been much more effective—the batteries would have been silenced, and the damage done by the Russian guns comparatively small. It should also be borne in mind that an attack on Sevastopol by an independent fleet would be carried out in a far different manner. It seems plain that the only course would be that recommended by the boldest spirits. To go right in, unmindful of the fire of the batteries, and to anchor entirely within the bay, is a course which might end in success; for the town might then be shelled and the shipping destroyed.—London Times.

War is the cutting off of an elephant's head so widely different from cutting off any other head? Ans.—Because, when you cut the head from the body, you do not separate it from the trunk.

Raising—the price of Newspapers.

BUSINESS DIRECTORY.

MAN, KNOW THYSELF!

An Invaluable Book for 25 cents—Every Family should have a Copy! 100,000 COPIES SOLD IN LESS THAN A YEAR. A new edition, revised and improved, just issued.

DR. HUNTER'S Medical Manual, and Hand Book for the Afflicted.

Containing an outline of the origin, progress, treatment and cure of every form of disease contracted by promiscuous sexual intercourse, by self-abuse or by sexual excess, with advice for their prevention, written in a familiar style, avoiding all medical technicalities and everything that would offend the ear of decency; with an outline of complaints incident to females, from the result of twenty years' successful practice, exclusively devoted to the cure of diseases of a delicate or private nature.

To which is added receipts for the cure of the above diseases, and a treatise on the causes, symptoms and cure of the FEVER and AGUE. Testimony of the Professor of Obstetrics in the Pennsylvania College, Philadelphia—DR. HUNTER'S MEDICAL MANUAL.—The author of this work, unlike the majority of those who advertise to cure the diseases of which it treats is a graduate of one of the best Colleges in the United States. It affords me pleasure to recommend him to the unfortunate, or to the victim of malpractice, as a successful and experienced practitioner, in whose honor and integrity they may place the greatest confidence.

From A. Woodward, M. D., of Pennsylvania University, Philadelphia.—It gives me pleasure to add my testimony to the professional ability of the author of the Medical Manual. Numerous cases of Disease of the Genital Organs, some of them of long standing, have come under my notice, in which his skill has been manifest in restoring to perfect health in some cases where the patient has been considered beyond medical aid. In the treatment of Seminal weakness, or disarrangement of the functions produced by self-abuse or excessive venery, I do not know his superior in the profession. I have been acquainted with the author some thirty years, and deem it no more than justice to him as well as kindness to the unfortunate victim of early indiscretion, to recommend him as one in whose professional skill and integrity they may safely confide themselves.

ALFRED WOODWARD, M. D.

"This is, without exception, the most comprehensive and intelligible work published on the classes of diseases of which it treats. Avoiding all technical terms, it addresses itself to the reason of its readers. It is free from all objectionable matter, and no parent, however fastidious, can object to placing it in the hands of his sons. The author has devoted many years to the treatment of the various complaints treated of, and with little breath to puff and too little presumption to impose, he has offered to the world at the merely nominal price of 25 cents, the fruit of some twenty years' most successful practice.—Herald.

No teacher or parent should be knowledgeable imparted in this valuable work. It would save years of pain and mortification and sorrow to the youthful student who reads it.

A Presbyterian clergyman in Ohio, writing of "Hunter's Medical Manual" says—"Thousands upon thousands of our youth, by evil example and influence of the passions, have been led into the habit of self-pollution without realizing the sin and fearful consequences upon themselves and posterity. The constitutions of thousands who are raising families have been enfeebled, if not broken down, and they do not know the cause or cure. Anything that can be done to enlighten and influence the public mind as to check, and ultimately to remove this wide spread source of human wretchedness would confer the greatest blessing next to the religion of Jesus Christ, on the present and coming generation. Intemperance (or the use of intoxicating drinks) though it has slain thousands upon thousands, is not a greater scourge to the human race. Accept my thanks on behalf of the afflicted, and believe me your co-worker in the good work you are so actively engaged in."

One copy (secretly) enclosed will be forwarded free of postage, to any part of the United States for 25 cents, or six copies for one dollar. Address, (post paid) CHASE & CO., Publishers, or Box 196, Philadelphia.

Booksellers, Converses and Book Agents, supplied on the most liberal terms.

October 12, 1854-ly.
