The Burnside Expedition.

As this enterprise is now attracting the attention of the public, we have copied the following fist of its regiments, their colonels, with Gen-eral Burnside's staff.

The expedition is composed of an army, army transport vessels and navy co-operating ships. The cutire force is under the command of Act ng Major-General Ambrose E. Burnside. The forces are divided into three brigades, composed is follows:

FIRST BRIGADE—GENERAL JOHN G. ROSTER MECHANIST CONTROL OF THE CONT Connecticut 10th, " Charles L. Russell.

SECOND BRIGADE—GENERAL JESSE L. RENO. Massachusetts 21st, Colonel Augustus Morse. Pennsylvania 51st, John F. Harstantt.
New York 51st, Edward Fefrero.
New Jersey 9th, Joseph W. AllenN. Hampshire 6th, Nelson Converse. THIRD BRIGADS-GENERAL JOHN G. PARKS.

Connecticut 8th, Colonel Edward Hariand.
11th, 'T. H. O. Kingsbury
New York 53d, Ool. J't Lionel d'Epineuel
Rhode Island 4th, Colonel J. P. Bodman. 5th, Maj. J. W. Wright. (1 bat.) lew York 89th, Col. Harris'n'S. Fairchild. The following are the staff officers of General New York

Burnside's army : General Burnside's staff. Assistant Adjutant-General Captain Lewis Richmond Division Quartermaster-Captain Herman Assistant Division Quartermaster—Captain

Wm. Cutting.

Assistant Division Commissary—Captain E. R. Goodrich. Medical Director, Acting Division Surgeon Major W. H. Church, M. D.

Ade-de-Camp—Lieutenant Duncan C. Pell. Aid-de-Camp—Lieutenant Geo. R. Fearing Naval Officer—Commander S. F. Hasard, U 8. N.

GENERAL POSTER'S STAFF-FIRST BRIGADE. Assistant Adjutant-General—Captain Charles Brigade Quartermaster—Captain Daniel Mes

Brigade Surgeon Dr. Alf. Hitchcock, of Mas-GENERAL RENO'S STAFF SECOND BEIGADE. Assistant Adjutant General—Captain E. M

Quartermaster-Captain Chas. G. Loring. Aid-de-Camp—Lieutenant B. F. Reno. Aid-de-Camp—Lieutenant G. A. Morris. GENERAL PARKER'S STATE THIED BRIGADS.

Aid-de-Camp—Lieutenant M. A. Hill, Aid-de-Camp—Lieutenant Philip M. Lydig. The total land forces of this division may be summed up as follows: Fifteen full regiments and one battalion of infantry; one battalion six pieces of field artillery; forty-five rifled guns, distributed through the fleet, or a total of fifty-one guns at the disposal of the land forces. The regiments are with two or three exceptions up to the standard of one thousand men; and adding the gunners in charge of the fleet, the

total tighting force amounts to fully sixteen thousand men, aside from the naval vessels. The military forces of the expedition will be A. Howard, who is a person of great experience, having been for many years attach both the navy and revenue service of the United States. He was in the navy as midshipman while yet quite young, and, by his indus-try and off-hand manner, won the esteem of all his comrade. For some reason he left the service and entered that of the revenue marine, in which he continued for some time During the Mexican war he was engaged in the conflict, and acquitted himself nubly, adding fresh laurels to those he had already won. He was also engaged in the merchant service After being some years out of the service, he again returned to it, and, before the present expedition, stood in the rank of captain in

the revenue marine. The total number of vessels of all kinds, aside from the naval forces, is forty-five, and are divided as follows: Nine steamers, nine propellers or gunboats, four ships, five barks one brig, seventeen schooners and five floating batteries. These steamers are all unarmed, troops. Their capacity ranges from five hundred to one thousand men each, the Northerner being the largest and the Suwanee the

both carry troops and assist in attack.

A number of pontoon bridges, of a new and trusses, about two inches in circumference, inthe interlaced trusses guaranty. When thrown across a river, if properly secured, it will remain for a length of time in its position, so that if retreat becomes necessary among our soldiers

there will be no difficulty met with. The entire length of the bridge which car thus be formed is 5,440 feet, or a trifle over a mile. When the floats are wanted for some other point they can be taken out, put on wheels and axles made for the express purpose, and drawn by horses with as much facility as

FLOATING BATTERIES.

There are five floating batteries attached to

men who work the batteries. A large amount of machinery, which is required in the varied and peculiar operations of the batteries, is also and peculiar operations of the batteries, is also on board. The batteries are adapted for use either on the boats or on land, with almost equal advantage. The guns are understood to be principally nowitzers, and are, though comparatively large guns, very-light in proportion Howitzers, it will be remembered, are designed for rapid and destructive firing at short distances. The gun carriages are so constructed that, by exchanging the small wheels necessarily employed on the decks of vessels for larger ones, the guns may be used as shore batteries. The transfer can be performed with the ut-most facility. The boats of light draft—per-haps three or four feet—may approach near enough to a beach to permit one end of a car-

riage-way or "fram way" to be placed on siare.
The wings of the carriages he ag been changed, as before described, and the tram-way changed, and force described, and the tram-way adjusted, the guns may be run off, and be ready for operations on land in the space of one minute.

The batteries are, therefore, very effective as well as novel engines of war. They are of course designed to operate against land forces only, and in covering the disembarkation of troops. They would also perform exceedingly valuable service in securing a position after the landing of troops should have been accomplished. For reasons which have, been explained it would be almost if not quite inpiained, it would be almost if not quite inpossible to sink these vessels.

Two field batteries compose a part of the armament of the expedition. These are sending the completest ever manufactured, and completest ever manufactured, and completest ever manufactured advantages not possess. blue several important advantages not possessed by any other artillery. But few batteries—not ten in all—are thus far in use, and these, with the exception of three or four for Ohio, were made to the order of the government. The guns are of a new description, recently invented, and of which the extensive manufacture has but just begun. They are knows as "Wiard's steel rified cannon," and are claimed to possess extraordinary capacity. They have been just to many tests, and have successfully withstood them.

The carriages on which they are mounted combine several advantages over those hitherto in use. The principal one is the extraordinary elevation which may be given to the gun. For ordinary smooth-bored ordnance fifteen degrees are generally allowed, and for rifled twelve degrees have been deemed sufficient; but these guns may receive an elevation of thirty five of shelling, and even for seige purposes. These guns carry the Hotohkies shot and shell, and may be used to some extent as mortars as it is not difficult to obtain a sufficient degree of elevation to admit of dropping shells into a fort. The wheels of the carriage are of a peculiar construction. They are made in sections. The nave or hub consists of two flanges, which grasp the arms of the wheel and may be tightend at pleasure. Between the bises of the arms adjustable wedges are inserted. The im upon a principle similar to that employed a the hub. The advantage is that, if a wheel shall be struck by shot, the injured portion may easily be replaced; and, besides, the danger of breaking in consequence of contraction and consequent loosing is entirely obviated.

Each battery comprises six guns—found six pounders and two twelve-pounders.

These batteries are superior to any ever before manufactured in any part of the world. How to Walk.-Let any one take note and passed it. wherever he may chance to be, whether in city, in a country village or in some back rural ments to the consular and diplomatic appropritown—and he will be struck with the exceedation bill. They non-concurred in these, inaccompanied by a naval brigade, composed of ingly small number of persons who walk well—cluding Florence among the consul-general-sailors, who are to man the small boats and renthose who control gracefully, both their limbs ships, and striking out Hayti and Liberia, etc.

such violence to expose persons in the street to being struck with the paddles, so to speak, by which these peregrinetors propel along the sidewalks or highways. When such persons tarry a cane or umbrella, parallel to the horizon as is not unfrequently the case the case the case and colorized to the case the case are animal to the case the case the case the case the case the case are capital to the case t der valuable assistance in landing the troops, in case of attack or occupation. The brigade in walking. It is very common in walking to will be under the command of Colonel William swing their arms and hands to and fro with rear are quite sure of a caning, as more than one can testify from recent experience.

MARK ETS BY TELEGRAPH.

New YORK Jan. 94

The inference one would naturally draw from observing the swinging of the arms in travel-ling, is, that walkers in moving along the street are compelled to use their upper extremities as in awimming. This violent swinging of the arms and hands forward and backward while walking, with greater or less violence, just as the gait is quick or slow, is mostly confined to males, the other sex being generally free from this awkward and unseemly habit.

There are exceptions among those of the stronger sex; for not unfrequently is one observed with both hands plunged into the depths of his pockts, either of a sack coat or his breeches, as if in search of the last lone and are intended exclusively for carrying cent-a habit as vulgar as it is boorish, clumsy and unseemly. A few young ladies have been observed of late pocketing their hands. It is hoped they are not about to adopt this uncouth

habit of the other sex. /In walking, some few maintain an erect po-sition of the body, while others, the many, innovel character, will be taken with the expedi-tion. When run across the water they will be ble portion of the arc of a circle. It is redivided into sections of forty feet long, and entirely composed of wood. The weight of an tain an upright position of the boy while entire section is two thousand four hundred and standing or walking, though man is the sole seventy pounds, and it can be made ready for erect being that God made to inhabit the earth. A large proportion of children and youth in the elegance of a queenly grace adorns the civilized society, before they reach the age of gambols of babyhood. Unimpeded yet by the launching, by experienced engineers in the A large proportion of children and youth in space of five minutes. The chief point of excellence pertaining to the bridge is the means adopted for supporting it, which consists of wire weight of years. three score and ten. So unusually supporting it, which consists of wire weight of years. three score and ten. So unusually supporting it, which consists of wire weight of years. The chief point of excellence pertaining to the bridge is the means twenty one, are bowed down as if under the sweeping raiment to which she foolishly as ires, she glides among her grosser play-fellows like a supporting it, which consists of wire weight of years. weight of years, three score and ten. So unu-sual is it to see a man or woman that walks to see a man or woman that walks to yell yacht among a fleet of coal barges. Un-erect, that such are sure to be subject for re-consciousness (alas, how soon to depart!(has terlacing one another as they run. When erect, that such are sure to be subject for replaced perpendicularly along the bottom, that mark. In savage life the reverse is the case degree of strength cannot be arrived at which See the American Indians.

> SOLDIER'S LETTERS .- Our readers, and particularly those who have friends in the army, are always glad to receive news from the ticularly those who have friends in the army, are always glad to receive news from the several camps; and we have no doubt that if the soldiers would devote their leisure hours to writing letters for the papers, they would afford a great deal of ebjoyment for the "loved ones at home." Our columns are at all times open to the publication of letters from our gallant soldiers, sent directly to us, are furnished by their friends to whom they have been addressed.
>
> The Way to do It.—A gentleman who read the intermediate in the Telegraph, some time ago, in reference to the removal of "clinkers" in stone coal stoves, says that he tried the experiment, and found it to work admirable. He gives us of the publication of letters from our gallant soldiers, sent directly to us, are furnished by their friends to whom they have been addressed.

Washington, Jan. 24.

IN SENATE. On the motion of Mr. TRUMBULL, (Ill.,) the

bill in relation to certain judicial districts of the United States courts was taken up. The bill was passed, as reported by the committee. The case of Senator Bright was then taken Mr. Davis, (Ky.,) made an explanation of what Mr. Harlan, (lowa,) had said in reference to the law against teaching slaves. He said that where he lived they had day schools and

Sunday schools, where the slaves were taught to read. His own slaves when born were bap-tised in the rites of the church to which he belonged, and the female slaves given the same in marriage as white persons.

Mr. Rherr himself, who owned a large number of slaves, built a church and employed a preacher expressly for their edification. One

of the great causes of the rebellion which he omitted to mention yesterday, was the division of the church north and south. Mr. Cowan did not see sufficient cause for finding Mr. Bright guilty of treason, nor ex-

pelling him from the Senate.

Mr. Harris, (N. Y.,) could not convict the Senator of treason on the facts of the case. He thought care should be used in establishing so dangerous a precedent.

Mr. TEN EYCK, (N. J.) I opposed the expul-

sion of the Senator.

Mr. CLARK, (N. H.,) thought the Senate could not properly satisfy the country or support the

administration if we permitted such a Senator to retain his seat. The Senate went into executive session and adjourned till Monday.

HOUSE OF REPRESENTATIVES. The House passed the joint resolution from the Senate, appropriating ten thousand dollars to pay the expense of the committee appointed to inquire into the conduct of the war; also Senate bill appropriating twenty five thousand dollars to be expended under the direction of the Secretary of War, if, in his judgment the same be necessary, for the protection of emi-grants on the overland routes between the At-

lantic States and California, Oregon and Washington Territory.

Mr. Fenton, (N. Y.,) presented a resolution of the N. Y. Legislature in favor of the enactment of a law to prevent frauds on the Govern-

Mr. Fenton said that the special committee on war contracts had the subject of which these resolutions treat under consideration, and when MAN,) moved it be referred to the said committee, but the House determined to send it to the Committee ou the Judiciary, and he was not advised that it has been heard from in the House since. It was a subject of great importance, and required immediate legislation; therefore, he moved its reference to the special committee on the investigation of war con-

tracts. The motion was carried.

The House then resumed the consideration of the bill to amend the Indian intercourse acts,

The House considered the Senate's amend-

New York, Jan. 24. Flour firm, sales of 8,000 bbls. at \$5 50@ \$5 56 for State; \$6@\$5 05 for Ohio, and \$5 80@\$6 10 for Southern. Miss., 383; Missouri 6's, 427. Young Grais.—To our thinking there is no more exquisite creatures on earth than a girl from twelve to twenty years of age. There is a period in the summer's morning, known only to early risers, which combines all the tenderthe dawn with nearly all the splendor of the day. There is at least full promise of dazzling noon; but yet the dewdrop glistens on the half opened flower, and yet the birds sing with rapture their awakening song. So, too, in the morning of a girl's life there is no time like this, when the rising glory of womanhood sparkles from the thoughts of an infant, and all the effect of the highest breeding; freedom gives her elegance and health adorns her with beauty. Indeed, it seems to be the peculiar province of her sex to redeem this part of life from opproblum.
