THE BEST TESTIMONY.  
BEST MEDICAL AUTHORITY.

PENNSYLVANIA HOSPITAL.  
[FROM OFFICIAL HOSPITAL REPORTS.]

MAY 10, 1860.—Ellen S., 28, single, never was very strong. Two years ago she had an attack of acute rheumatism, from which she was confined to her bed for two weeks and subsequently from a relapse for four more. She has been well since that time, but on the 1st of June, 1860, she was again attacked, the attack being in her back, felt cold, but had no decided chill. Two days later her ankles began to swell, which was followed by swelling of the knee joints and of the hands. She has now dull pain in her shoulders, and her knees are very tender, red and painful; both hands are affected, but the right is most so. This, then, is a case of acute rheumatism, or, as it is now fashionably called, rheumatic fever. The case, and from time to time call your attention to the various symptoms which present themselves. My chief object in bringing her before you now, is to call attention to the remedy which has recently been recommended in the treatment of rheumatism. I mean propylamine. Dr. Avenarius, of St. Petersburg, recommends it in his highest terms, having derived great benefit from its use in 260 cases which came under his care. Various commendatory testimonials respecting it have appeared in our journals, and I propose therefore to give it another trial. I must confess I am always incredulous as to the worth of new remedies, which are vaunted as speedily; but this comes to us recommended so highly, that we are bound to give it a trial.

SAME CASE FOUR DAYS LATER!  
MAY 23, 1860.—I will now exhibit to you the patient for whom I prescribed Propylamine, and was then laboring under an attack of acute rheumatism. She has steadily taken it at night. The day after you saw her, I found her much more comfortable, better than she expected to be for a week or more, judging from her other attacks. (The patient now walked into the room.) The improvement has steadily progressed, and you cannot fail to notice a marked change in the appearance of her joints, which are now nearly all of their natural size.—Thus far our experiment would have seemed very successful; but, gentlemen, we must wait a little while before we can give a decided opinion as to what it is to be the result.

Here is another patient who was placed on the use of the same medicine on Sunday last; she has long been suffering from chronic rheumatism, and I found her at that time with an acute attack upon her right knee. The attack was not severe, but she was much swollen and tender. She took the color of Propylamine in three grain doses every two hours, and you will perceive that the swelling of the joints has much diminished.

THREE DAYS LATER!!  
MAY 28, 1860.—This is the case of acute rheumatism treated with propylamine, the first of those to which I called your attention at our last clinic. She is still very comfortable, and is now taking three grains daily. In this case it has seemed to be followed by very satisfactory results. The second case to which your attention was called at our last lecture, has also continued to do well. I will not bring before you a very chronic case of acute rheumatism, and if the result be satisfactory, I think, as good judgment, we shall justly render our verdict in favor of propylamine.

He is a seaman, 29, who was admitted a few days ago. Has had occasional rheumatic pains, but not so as to keep him out, until eight days ago. The pains began in his right knee, and he was confined to his bed. He was later, the joints of the upper extremities. These joints are all swollen, tender and tender. His tongue is furred; his skin, at present dry, though there has been much sweating. His pulse is full and strong, and about 90. He has now used propylamine for twenty-four hours. This gentleman is what may be called a strictly typical case of acute rheumatism. There was exposure to cold and wet, and this exposure was followed by a feeling of coldness, severe articular pain, beginning at its usually does, in the lower joints. There is fever and the profuse sweating, so generally observed in acute rheumatism. I did not bring this patient before you with the intention of giving you a lecture on all the points connected with rheumatism, but to again give a trial to the new remedy we have used. It was therefore steadily given in three grain doses every two hours for five days. The patient has got along very nicely, and is now able to walk about, as you see. I do not hesitate to state that in the case in which we have tried the Chloride of Propylamine, the patients have recovered their health much earlier than under the treatment ordinarily pursued. I wish gentlemen, you would yourselves try it, and report the results.

THE RESULT.  
A FAVORABLE VERDICT.

JUNE 8, 1860.—The next of our convalescents is the case of acute rheumatism before you at our clinic of May 26th, which I then called a typical case, and which was remarked was a fair opportunity for testing the worth of our new remedy. It was therefore steadily given in three grain doses every two hours for five days. The patient has got along very nicely, and is now able to walk about, as you see. I do not hesitate to state that in the case in which we have tried the Chloride of Propylamine, the patients have recovered their health much earlier than under the treatment ordinarily pursued. I wish gentlemen, you would yourselves try it, and report the results.

For a full report of which the above is a condensed extract, see the Philadelphia Medical and Surgical Reporter. It is the report after a fair trial by the best medical authority in this country, and makes it unnecessary to give numerous certificates from astonished doctors and rejoicing patients.
