PENNSYLVANIA HOSPITAL [FROM OFFICIAL HOSPITAL REPORTS.]

[FROM OFFICIAL HOSPITAL REPORTS.]

[MAY 19, 1860.—Kiles B., set. 28, single, never was very strong. Two years ago she had an attack of acute rheumatism, from which she was confined to her bed for two weeks and subsequenty from srelapse fer four more. She has been well since then till last Satur day, while engaged in house cleaning, she took cold, had pain in her back, felt cold, hat had 80 deeded chill. Two days later her ankies began so swell, which was followed by swelling of the knee joints and of the hands. She has now dull pain in her shoulders; and her knuckles are very tender, red and painful; both hands are affected, but the right is most so. This, then, is a case of acute rheumatism, or, as it is now fashionably called, rheumatic fever. It is a well remarked typical case. We will carefully watch the case, and from time to time call your attention to the variest symptoms which present themselves. My chief object in bringing her before you now, is to call attention to a remedy which has recently been recommended in the treatment of rheumatism. Im can propytamine. Dr. Awenarius, of St. Pateraburg, recommended in the inglest terms, having derived great benefit from its use in 250 cases which came under his care. Various commendatory testimonials respecting it have appeared in our journaks, and I propose therefore to give it another trial. I must confess I am always incredulous as to the worth of new remedies, which are vanued as specifies; but this comes to us recommended so highly, that we are bound to give it a trial.

SAME CASE FOUR DAYS LATER !

Mil May 23, 1860.—I will now exhibit to you the patient for whom I prescribed Propylamine, and was then laboring under an attack of soute rheumatism. She has steadily taken it in doses of three grains every two hours (intermitting it a) with the control of the steadily taken it in doses of three grains every two hours (intermitting it at night.) The day after you saw her, i found her much more comfortable, better than she ex-pected to be for a week or more, judging from her other sitsox. (The patient now walked into the room.) The improvement has steadily progressed, and you cannot fail to notice a marked change in the appearance of her joints, which are now nearly all of their natural size.— Thus far our depriment would have seemed vory suc-cessful; but, gentlemen, we must wait a little white be-fore we can give a declaced opinion as to what is to be site result.

the result.

Here is another patient who was placed on the use of the same medicine on Sunday last; she has long been suffering from a bronio rheumatism, and I found her at that time with an acufe attack supervening upon her chronic affection. The wrists and knockles were much swollen and tecsu. She took she chloride of Propylamine in three grain doses overy two hours, and you will perceive that the swelling of the joints has much diminished.

THREE DAYS LATER !!

THREE DAYS LATER!!

MAY 28, 1866.—This is the case of acute rheumatism reases with propylamine, the first of those to which I salled your attendion at our last cities. She is still very comfortable, and is now taking three grains thrice daily. In this case it has seemed to be followed by very salsketory resalss. The second case to wanth your attendion was called at our last lecture, has also continued to lowel: I will now bring before you a very chrabiter stic case of acute rhoumation, and if the result be satted case of acute rhoumation, and if the result be satted case of acute rhoumation, and if the result be satted to the sature of the satted of th

He is a seaman, set. 25, who was admitted a few days ago. Has had obsasional rheumatic caunt, but not so as to keep his bed, mult clybt days ago. The pains began in his right knes, subsequently affected the left kneet, find later, the joints of the upper extremities. These joints are all swollen, touse and tander. His tongue is furred; his skin, at present dry, though there has been much sweating. His pulse is full and strong, and about 90.—He has now used propylamine for twolty-four hours. This gendeman is what may be called a strictly typical case of soute rheumatism. There was exposure to cold and wet, and this exposure is followed by a feeling of coldness, severe articular pain, beginning, as it usually does, in the lower joints. There is fover and the profuse sweating, so generally attendant on soute rheumatism. I did not bring this patient before you with the intention of giving you a locture on all the points congected with rheumatism, but to again give a trial to the new remedy, we, are losting, and to exhibit to you this typical ously-last have called it, thad which there on just not be a fairer opportunity for testing the medicine in appetion. We are, therefore, avoiding the use of all other medicines, even and lynes, that there may be no misgivings as to which was the officient remody. You shall see the case of a future clinto.

JURIE, 1890.—The next of our convalencents is the case of achieve rheumatism before you at our clinic of May 20th, which I then belief a Typical case, and which it was remarked was is fair opportunity for testing the worth of our new remedy. It was therefore steadily given in three grain doese eyery two hours for four days. The patient has get along very necely, and is now able to walk appliction to be able to have never seen at sovere a case of acute redunatism so soop-restored to health as this man has been, and without being prepared to decide positive oy as to the value of the remedy we have said, I feel bound to state that in the cases in which we have tried the Chloride o Propylamine, the patients have regarded, their health much earlier than noder the tradition of Schinkily pursued. If wish gentlemen, you would yourselves try it, and report the results.

For a full report of which the above is a condensed extract, see the Philippinis Medical and Surpley Re-porter. 111 in the report after a fair trial by the best medteal authority in this country, and makes it unnecessary to give humaious continues from assontaned doctors and rejeicing patients.
