PATRIOT AND UNION.—The DAILY PATRIOT AND Union can be had by Dauphin subscribers, every morning, at the periodical store of J. S. FRAIM.

A stated meeting of the Citizen Fire Engine and Hose Company will be held in their hall this (Mon-Jay) evening, at 7 o'clock. Every member is requested to be present, as business of importance will be transacted. The semi-annual nomination of officers for the ensuing term will take place.

POULTEY.-The stock of poultry in market on Saturday morning exceeded the demand, coming as it did so close upon the heels of Thanksgiving Day. We fear that some of our country cousins sarted back a portion of their turkeys, geese, ducks and chickens, or sold at a sacrifice. We hope not feelings to deal in small figures.

Alb For Kansas .- A meeting of the citizens of Harrisburg will be held in the Court room, in Brant's Hall, this evening, Monday, Dec. 3, to devise means to extend aid to the suffering people of Kansas. Mr. Gardner, who resides near Lawrence, an accredited agent to solicit donations, will be present to address the meeting, and give a true statement of affairs as they exist at present in Kansas.

THE CONTINENTALS .- As we expected, the Coninentals succeeded in drawing the largest audience ongregated within the walls of Brant's Halls since last winter. There were, we venture to say, at least a thousand persons present, and the Company gave the most unbounded satisfaction, and the only regret appeared to be that they could by no means prolong their stay for a night or two more

Best Daily in the State-The Harrisburg PA-: RIOT AND UNION .- Bellefonte Watchman. That is "an opinion as is an opinion," founded

upon a clear and concise judgment that does the most infinite credit to the discernment of the wri-

P. S .- Just go over to Jerry Butts, and tell him to mix you the tallest kind of a "tipular" his house fords.

INSURANCE.-We invite the attention of proparty owners to the advertisement of Mr. William Buchler, published in another column of this paper. The North American Insurance Company, of which he has accepted the agency for this city, is the oldest insurance company in the State, with a bong fide capital of nearly one and a quarter millions of dollars, and one which always adjusts its lasses promptly.

HELD TO BAIL. One William Griffy made an attack on the premises of Ann McNeal, in Love lane, at an early hour on Friday morning, kicking in the panel of the door, and throwing a brick into the house, and cutting up divers high shines, while still laboring under the weight of his Thanksgiving turkey. Ann didn't approve of such "cuttings up," and she had Griffy before the Mayor on Saturday evening, when he was required to give bail in the sum of \$200 to answer at the next Court.

RECEIPT FOR CLEANING DUCKS .- After cleaning your duck, wild or domestic, you always find plu feathers and down upon it. The latter is usually singed off, and the former is got rid of by the tedious process of picking. To obviate all this, after your duck is rough picked, take a table spoonful of finely-powdered rosin, and rub over it . then pour boiling water over it, when, by rubbing with it all the down and pin feathers, and leaves your duck as clean as a new laid egg. Try it.

FURS ON BEAUTIFUL WOMEN .- There is nothing that looks so rich, easy and comfortable as a beautiful piece of fur wrapped around a beautiful piece of womanhood. Furs, like gold and silver, have always been highly estimated by the human family and "the rest of mankind." Rich furs were for many ages used as gifts from one prince to another -nobody less than a prince being allowed to wear them. The sumptuary laws which once existed with regard to the wearing of furs, were at once numerous and stringent. In the days of Henry VII. it was two years imprisonment for any person below a baronet to wear a piece of ermine, "as large as your hand." Those absurd laws, however, have all been repealed, so that a person at the present time can go his length on furs-the only limit to his taste being his pocket-book and creditors.

NEW BLASTING POWDER .- A French scientific newspaper says that a patent has just been taken blasting powder from spent tan bark. It says that while the price of this powder is less than that of gunpowder, it takes but one-seventeeuth part as much to produce the same effect as the latter. It is composed of fitty-two and one-half pounds of nitrate of soda to seventy-two and one-half pounds of waste tan bark, and twenty pounds of pulverized sulphur. The nitrate of soda is dissolved in a sufncient quantity of boiling water, and the tan bark added in a manner to completely impregnate it with the solution, after which the sulphur is added in the same way. The mixture is taken from the tire and thoroughly dried, when it is ready for use. If it is wet, this does not permanently injure it, usual manner. It is not suitable for use in guns or cannons.

CHEMICAL ANALYSIS OF PETROLEUM.-Prof. B. Silliman, Jr., has recently published results of an exhaustive analysis of the oil obtained in such quantities in the oil regions on the upper Allegheny. We find his report at great length in the Venango Spectotor. Much of it is of interest to the chemist only, and other portions of it of general interest. The products of the oil, as developed. by the retort, were eight. Only the last two or three appeared at all stiffened by cold of 15 deg. | sen. These are all farming towns, and devoted below zero, while the first three or four products retained a perfect degree of fluidity. Exposed to the air they suffer no change. These oils are all composed of carbon and hydrogen in nearly the same numerical relations. Corrosive qualities were absent, showing its fitness for lubricating purposes. Exposed for many days in an open vessel, at a regulated heat of 212 deg., the oil gradually rises in vapor. The oil is nearly insoluble in pure alcohol, but in other it dissolves completely.

For gas producing it is unapproachable. It produces nearly pure hydrogen gas, which from a common burner smokes, but in an Argand burner consumes its smoke. Other products for producing gas are, however, less expensive. Fourteen quarts of the crude oil, distilled in a metallic vessel, 536 degrees Fahrenheit, produced 130 ounces of light colored oil with a density of 792. By application of still higher degrees of heat, still finer, clearer oil was produced. The loss on the whole amount of oil was about ten per cent, made up in part of at coally substance remaining in the alembic, and in part by losses incident to the mechanical appli-

ences necessary to the experiment. The chemist then goes on to speak of the various other products of his experiment. He says the parafine obtained does not exist ready formed in the original crude product, but is the result of the illes, occupy the lands they till. One large farmer high temperature employed in the distillation, by will employ a number of single men as laborers,

which the elements are newly arranged. He is while on several small farms an equal number of not prepared to say that it would be desirable, in ! families will be dependent for support. THE DAILY PATRIOT AND UNION may be had at | a pecuniary sense, to manufacture this product in a pure state. The result of the distillation was to the mowing and reaping machine, and other laborin a series of oils having valuable properties.

Mr. Silliman concludes that the only lamp in which the oil can be successfully burned is the camphene or chimney lamp. Burning fluid cannot be manufactured from this oil. On occount of depend, in no small degree, upon the progress of its smoke, the oil cannot agreeably be burned in a common hand lamp.

MEETING OF COUNCIL.-The regular meeting of Council was held on Saturday evening-all the members present except Col. William Metzgar and Mr. Martin.

Proceedings of last meeting read and approved. A message from the Mayor was read in reference to stagnant water on the premises of Terrance M'

Manus, and to certain pavements out of repair. The President gave notice that a number of bills the latter, for it does so incontinently hurt their | were presented, and there was no money to pay them.

> Dr. Bailey moved that no orders be drawn except to pay the salaried officers. Mr. Verbeke moved to amend by including all

the orders presented this evening : which was not agreed to-yeas 5, mays 6.

The question recurring on Mr. Bailey's motion, it was agreed to.

Petition presented from citizens for a continuation of water-pipe in Third street to Reilly's line. Referred to Water Committee. Also, one from citizens of the Fifth and Sixth

ward for a pavement, board-walk or cinder walk, along Second street, from Broadway to North street. Mr. Verbeke moved that the Street Commission-

ers of the Third district be authorized to make a cinder walk as above. Pending the above, Mr. Hamilton offered a re-

solution that from and after this date the Street Committees suspend the purchase of stone and the building of crossings until further ordered by Council; which was agreed to.

Mr. Verbeke renewed his motion, which the President ruled as cut off from further action by the passage of Mr. Hamilton's resolution.

The committee to whom was referred the subject short time only; which was not agreed to-ayes 4, nays 6.

The second part of the report, which recommends the passage of an ordinance more stringent in its operation against forestalling, was adopted-Mr. Verbeke, from the committee to whom was referred the subject of the appointment of a fire nolice, made the following report:

The committee to whom was referred the petition of sundry citizens, asking that three firemen from each fire company in the city be appointed to protest property from wanton destruction at fires, and the depredation of thieves, respectfully recommend to Council that the Ordinance Committee be instructed to report an ordinance to the following effect:

1. That each fire company may nominate annually three of its members to act as a special police force, without compensation, in case of fire, who shall be approved of by Council.

2. That the persons so nominated and confirmed shall conform to all the police regulations now in force in the city, and shall be under the control of the Mayor, who shall have power to suspend or remove for misconduct, and to appoint a substitute until the next meeting of Council. Adopted.

Bill of Fred. Trace for building Nagle street sewer was wresented and referred.

Mr. Verbeke reported a resolution in relation to the renting of the market stalls. Referred. On motion, it was resolved that a special meet-

t with your hand, a fine cuticle comes off bringing | ing of Council be held on Thursday evening next. | fresh tints have frequently to be given. These are damages for injuries sustained by falling into a the petal is dipped in color, and a quantity of green Adjourned. ferred to a select committee.

> PHYSICAL EFFECTS OF CLIMATE.—We have no recorded observations of the physical effects of the various climates of the United States sufficiently extensive and accurate to warrant any positive generalizations. That there are striking differences between the inhabitants of the North and those of the South, and even between the people of continuous States is a matter of common remark; but the. precise nature of these differences has seldom been clearly defined, and it is difficult, where so many other conditions are also dissimilar, to detemines what of the effects observed, are due to climate in-

According to our own observations, which have extended from New Hampshire and Vermont on the north to the borders of Florida on the south, the finest race of men in physique in this country are out in Belgium for a simple method of making to be found between the parallels of 24 deg. and 40 deg. north latitude, and particularly in the State of Maryland, Virginia and Kentucky.

They are large, symmetrically formed, erect and graceful in carriage, and have generally fine, open and pleasant countenances. Between these two parallels also lie our finest climates; and, although the concurrence of these circumstances does not prove that the relation of cause and effect exists between thom, we are justified in considering some connection as at least probable. The more aristocratic origin of the early settlers of these States, their high culture, less austere religious views, and strong social tendencies; their abundant pleasureable exercise in the open air, and their freedom but on being again dried, is as good as ever. If | from severe labor, have no doubt conspired with tired in the open air it causes no explosion, but is the genial influences of a milder climate to produce very efficient for blasting when confined in the the striking differences observable between their descendants and those of the New England Puritan. 1

> WHAT THE CHNSUS PROVES .- The scuttering statements which reach us of the population of different localities as shown by the recent census, prove conclusively one fact respecting the older parts of the country, viz: that the gains are all in the cities and large villages; while the country is losing in number of its inhabitants. We have hefore us at this moment the figures for three towns in Oneida county, viz: Ava, Boonville and Remlargely to the dairying business. Beonville and

Remsen contain considerable villages. In Boonville the present population is 4,240 against 4,424 in 1855—a loss of 185. But the village of Boonville, which is a thriving place at the termination of the Black River and Utica Railroad, and a place for shipment of considerable quantities of produce by the Black River Canal, has gained 242, while the town in which it is included has lost 185.

Remsen, in the same period of five years, has gained six, having now 2,684. Ava has now 1,270, a gain of 29. Both of these towns have large tracts of unoccupied land, which has been slowly taken up for settlement, thus having in one respect the elements of a material gain in popula tion. But the fact is well established, that in purely farming districts, where the lands are estimated at the ordinary value for legitimate farming purposes, independent of the influence of city markets, the population is surely but steadily diminishing. This is caused by the absorption of the smaller farms by the larger, the diminution in the number of owners of real estate, and the proportionately smaller number of persons dependent upon a given number of cultivators, than is the case where the workmen own and, with their fam-

The introduction of machinery in farm labor, as obtain over 90 per cent. of the whole crude product saving appliances, enables the farmer to cultivate a given number of acres with less labor than formerly, and thus reduces, in a corresponding ratio, the population of the agricultural districts. To what extent this influence may be carried, must invention, and the introduction of improved implements and machines in farm culture. The present movement in that direction is quite rapid, and we see no reason to believe that it will be less so in the future.

> In certain localities the rule to which we have referred, does not hold good. In the neighborhood of large cities and villages, where, owing to such proximity, the land becomes valuable beyond the price that can be paid for it for strictly plain farming, the influence is quite in the opposite direction; and the farms, instead of growing large, become subdivided, and the land is distributed among a large number of owners. Hence the families are more numerous, and the cultivation more perfect, partaking of the character of garden or truck farming, more than of ordinary farm management. In such cases the population, with each returning census, will be found to have materially increased.

> IGNORANCE .- When people hear that unpaid letters are daily dropped into the Post Office without being prepaid, they are very apt to exclaim "what ignorance." But this is not the only species of ignorance which exists in this enlightened 19th century in the State of Pennsylvania. A Republican, who resides in a neighboring county, is something of a wag, and withal a firm believer in the doctrine that all is fair in politics, relates with great gusto, some of his adventures in the late campaign.

"I went out," said he, " into two or three townships, settled principally by our own country Germans, who had always been Democrats. After exhausting myself on the better times that would come from the tariff, and failing to convince, I went in on the Homestead bill. This they had heard about, but did not clearly understand, and you may be right sure that I was ready to explain it. I told them that immediately after Lincoln's of forestalling made a report in favor of clothing election, a bill would be passed giving every man the Clerk with power to appoint an assistant, for a | 160 acres of land. A few of the more ignorant and stubborn I told could get their warrants for 160 acres if they voted for Lincoln, immediately after the election, if they called at my office. One day after the election three of them called for their

> warrants-and they rather had me !" "How did you get out of it?" said one. "Get out of it? Why I wriggled out. I told them that they were all given out, and no new ones would be issued until next March. I got them all tight, and sent them home jolly, hurrahing for Lincoln. I don't intend to run for any office myself!"

> What an immense amount of duplicity similar to the above must have been used to carry the elec-

MANUFACTURE OF ARTIFICIAL FLOWERS.—The manufacture of artificial flowers abroad differs somewhat in its various processes, though perhaps not essentially, from the manufacture in this country. Abroad, the material of which the flowers are made is, first and bost, French cambric, but a great quantity of Scotch cambric, jaconet, and even fine calico, are also used. For some descriptions of flowers, clear muslin, crape and gauze are wanted; and for some very thick petals, satin and velvet are necessary. These materials are provided in various colors, as well as in white, but Mr. Shriner appeared before council and claimed laid on with a sponge, or a camel's-hair pencil, or er, building on Pennsylvania Avenue. Re- taffeta is always at hand for leaves. The coloring matters used in dysing the material for the petals are various. Thus, for red, in its various shades, Brazil wood is largely used, also carmine, lake and curthamus. The best way of treating Brazil wood is to macerate it cold in alcohol for several days; a little salt of tartar, potash or soap will make this color pass into purple, a little alum gives it a fine crimson red, and an acid will make it pass into yellow, of which the shade is deeper, according to the quantity employed. Blue colors are prepared by means of Indigo, or Prussian blue. Yellow colors are given by turmeric dissolved in spirits of wine, by saffron, chrome yellow, etc. Green colors are obtained by mixtures of blue and yellow; violets by mixtures of red and blue, and by orchil and a blue bath; lilacs by orchil only.

> Power of Telescopes .- The space-penetrating power of the Rosse telescope surpasses the comprehension of the human mind to apprehend in all its vastness. One astronomer remarks that the appearance of Jupiter, as presented in this wondrous instrument, is as if a coach lamp were advanced into the tube; and another declares that the sublimity of the spectacle afforded by some of the large globular clusters of nebulæ is such as no words can express.

> Herschel estimated that a seven-feet reflector had the power to penetrate into space, which, compared with the naked eye, was twenty and onefourth feet; a ten feet, a comparative power of twenty-eight and one-half; atwenty feet, a seventy-five; and a forty feet, with a four-feet mirror, the immense power of one hundred and ninety-two. The Rosse three-feet speculum is much superior in space-penetrating powers to the largest disc in the possession of his great predecessor. It is estimated by competent authority, that the six-feet mirror is endowed with a power to penetrate without difficulty into space at least five hundred times further than is possible for the unassisted vision; that is, it will descry a single star six thousand times more remote than an average orb of the first mag-

The ladies are again invited to examine a new lot of bargains, which we just received, and among which will be found the following:-Beautiful double-width cloth for cloaks, at all prices; a few mere of those double Broche shawls, at \$7, worth double the amount; Blanket shawls, Mourning shawls, Arab, Japanese and French cloaks, Clouds, Neubias and hoods for ladies and children; Bradley's best made hoop skirts, 20, 25 and 30 springs; Cassimeres, Cassinetts, Muslins, Flannels, Linen Handkerchiefs, 6} cents; Chenille scarfs, 25 cents, and hundreds of other articles to be sold cheap, at BROWNOLD's cheap corner, Market and Second, opposite Jones House.

NEW Goods! NEW Goods!-Having returned from New York, I have received new a large lot of goods, all of which I bought at auction. One hundred pieces of beautiful Set Flower De Laines, the best quality, which generally sells for 25 cents, at 20 cents; 50 pieces Unbleached Muslin, the best in town, at 10 cents; 150 pieces of Cassinetts, Satinetts and Cassimeres, from 25 cents up to \$1.25 a yard; 25 pieces of White Flannel, cotton mixed, at 15 cents; 25 dozen of White Merino Stockings at 15 cents; 50 dozen of Gent's Wool Socks, 20 cents a pair; 10 dozen Gent's All-Linen Pocket Handkerchiefs with Colored Borders, very fine, 31 cents; good Merine Undershirts and Drawers, at 65 and 75 cents a piece. A lot of beautiful Traveling Baskets. Bust Calicoes, 10 cents, warranted fast

S. T. W SANFORD, M. D.,

Manufacturer and Proprietor, 208 Broadway, N. T.

rienced Nurse and Female Physician, presents to the attention of mothers, her

OOTHING SYRUP

which greatly facilitates the process of teething, by softening the gums, reducing all inflammation—will allay ALL PAIN and spasmodic action, and is

SURE TO REGULATE THE BOWELS.

Depend upon it mothers, it will give rest to yourselves, and RELIEF AND HEALTH TO YOUR INFANTS.

We have put up and sold this article for over ten years, and CAN SAY, IN CONFIDENCE AND TRUTH of it, what we have never been able to say of any other medicine—NEVER HAS IT FAILED, IN A SINGLE IN cine—NEVER HAS IT FAILED, IN A SINGUE IN-STANCE, TO EFFECT A CURK, when timely used. Never did we know an instance of dissatisfaction by any one who used it. On the contrary, all are delighted with its operations, and speak in terms of commendation of its magical effects and medical virtues. We speak in this matter "WHAT WE DO KNOW," after ten years' experience, AND PLEDGE OUR REPUTATION FOR THE FULFILLMENT OF WHAT WE HERE DE-CUARE IN advance of the property of the speak of the property CLARE. In almost every instance where the infant is suffering from pain and exhaustion, relief will be found in fifteen or twenty minutes after the syrup is adminis-

tered.
This valuable preparation is the prescription of one of the most EXPERIFNCED and SKULFUL NURSES in New England, and has been used with NEVER FAILING SUCCESS in

THOUSANDS OF CASES.

It not only relieves the child from pain, but invigorates the stomach and bowels, corrects acidity, and gives tone and energy to the whole system. It will altost instantly relieve
(#BIPING IN THE BOWELS, AND WIND COLIC, the theorem of the bowels, and wind colic, and overcome convulsions, which, if not speedily remedied, end in death. We believe it the IEST and SUREST REMEDY IN THE WORLD, in all cases of DYSENTERY and DIARRHEA IN CHILDREN, whether it arises from teething, or from any other cause. We would say to every mother who has a child suffering from any of the foregoing complaints—DO NOT LET YOUR PREJUDIOES OF OTHERS, stand between you and your suffering child, and the relief that will be SURE—yes, ABSOLUTELY SURE—to follow the use of this medicine, if timely used. Full directions for using will accompany each bottle. None genuine unless the fac-simile of CURTIS & PERKINS, New York, is on the outside wrapper.

on the outside wrapper.
