Lime is one of the mort abundant substances in nature—usually as a carbonate, consisting of  $56\frac{1}{4}$  parts of carbonate, and  $43\frac{1}{4}$ of carbonic acid, in 100 of the mineral. In burning the acid escapes in the form of steam. It is then quick lime. After exposure to the atmosphere, it absorbs water slacks, and falls into an apparent dry powder; it is then hydrate of lime, and is in the form in which it is generally used for agri-cultural purposes. It is the most valuable. when used directly after it was fallen into powder. If long exposed to rain and dews before being spread upon the land it loses a great portion of its fertilizing powers, which principally consist in its action upon vegable matters, causing them to decompose. and in its neutralising power upon acids,

which abound in the same soils.
The quantity of Lime to the Acre.—In Great Britain from 100 to 400 bushels are nineteen years-the term which leases run. is to apply 30 or 40 bushels once in three years, which is the preferable mode. We have seen it applied with good effect, however, at the rate of 800 bushels to the acre. This was upon a very stiff cold clay. Three hundred bushels would be about ten tons to the acre. Ten inches depth of soil, would weigh about 1000 tons. That would give one per cent of soil would give one per cent of lime. A case is reported in England, of soil upon which 120 bushels of lime had been used, being analyzed, which apparentty contained the same component parts as that along side, which had not been limed for a number of years. Yet the limed land produced 20 tons of turnips to the acre. while the unlimed portion only produced two tons, tops and all. This was upon red sand-stone land. One of the effects of lime is, it gives the soil power to absorb ammonia from the atmosphere, and retain that which is disengaged by decomposition of vegetable matter and manure in the soil. Hence the importance of applying lime with green crops, or using coarse manure with the lime. Indications of want of Lime in the soil.

may be seen in heavy crops of straw, and light crops of grain, and in the root crops where they seem to run to fingers and seed. Experiments should be made by every his fields, to ascertain whether lime would be beneficial to him. Very few places will be found where it will not be so.

To apply Lime to the Soil, spread it evenly upon a crop of clover about to be plowed under, or sow it upon the surface with the wheat, and harrow thoroughly. It, should never be combined with manure, unless the whole immediately plowed in.

To what Soil is Lime applicable?-Every clay soil, every peaty soil, and every soil in which vegetable fibre does not readily decay, because that is a sign that it contains some antiseptic acid, which prevents decay. This is the case in peat beds and swamps, sandy, gravelly, or thin soils, may be overlimed and injured; because in causing the decay of vegetables, it sets free the ammonia, the very substance of fertility required. To prevent this more food must be given for the lime to act upon. No farmer who knows what the action of lime is upon all soils will ever do without it, as an acces- through the war with Mexico, was discharsory to his manure. It is a component part | ed honorably from the service. He had conof all crops grown by the farmer. When siderable money, and he went out seven or applied to lands which had not borne wheat eight miles northwest of St. Paul, near for many years it has at ouce restored it to White Bear Lake, to make a farm. He fertility for that crop. Where it has failed built a snug cabin fenced a piece of ground once to remunerate the farmer using it, it with a board fence digging a hole near the has proved of the greatest benefit a hundred foot of each fence-post like a grave, which

composition of peat is an objection to its use. of provision, and then alone denned up for By the term, we mean all swamp muck particle winter. He had neighbors, to be sure taking more or less of that character. All within a mile or two; but with them he had peat contains resinous matter, which pre- no intercourse. once produced good crops of wheat because long before. They succeeded at last in there was lime enough in the soil to supply opening the shutter of his only window, and the requisite quantity to the grain, have by the dim light saw him upon his feet, ceased to be productive. They still pro- leaning upon his bunk. The party hastenduce a large growth of straw, but not a re- ed back to St. Paul, and returned with the munerating crop of grain. In some instan- coroner to the cabin. Having forced the ces, such lands have been restored to their door open which was fastened strongly informer fertility without applying a bushel side with props and braces they entered and of lime. Do you ask how? Simply by found deceased, as before stated dead, upon plowing deeper. In the hard untouched his feet, his left hand upon his forehead, the and unexhausted subsoil, there was plenty body frozen, and by his side, on the bunk, of lime lying hid, which only wanted stirring up and exposing to the action of the at- of cheese and perhaps of bread. He were mosphere, and bringing within reach of the several pairs of pantaloons, and had folded roots of the plants, to produce the same effect around his body \$207 in gold, and in one of originally derived from the top soil before it was exhausted. Our constant advice will be to use lime, plow deep, subsoil and drain stiff lands increase your crops, and grow rich, which you will do if you read and heed.

## The Rail Car--Vivid Description.

Would you like the luxury of a new sensation? Take your stand six feet from a railroad track in the night, and wait the passage of an express train. There is no wind stirring. Clouds close in the light of the stars. The hum of life has censed.— world there beats the heart of some one who Blackness and silence brood together upon the face of the earth. Afar off the listening car catches a dawning roar. Half heard and half felt-it grows into more distinctness -partly revealed by the trembling of the solid earth, and partly felt as a sharpless horror filling the air. Every second swells its awful volume, and deepens its terror.— The earth now quakes under its tread-u blazing glare flashes living horror into the surrounding air—and you see, crawling along in snaky track, with firey head crouched to the ground, and its long train swinging from side to side with a wavy motion-a gigantic and terror breathing monthe earth with its tread, and creating a that enormous mass, with its blazing eyes the hill.

and smokey breath-rushing with the speed An Englishman's Idea of America. of a common ball, and startling the air and earth with the overwhelming horror of its flight? What would the savage think seeing it for the first time? Imagine such a flight across the country fifty years agounheralded by a rumor of its coming--revealing its existence by the presence and rushing suddenly into oblivion as it now rushes darkness while you gaze upon the spot where it disappeared, and hear only the faint echo of its distant tread. What rumors of it would fill the earth .- What takes of its grandeur—of its speed and power-would startle the credulity of the remotest willage gossip .- New York Times.

#### Louis Napoleon Speech.

The late speech of Louis Napoleon seems o have opened the eyes of the people of France to the true character of the usurper. Letters from Paris allude to the effect it has heard a story-perhaps we knew whether applied at once, at intervals of ten fifteen, or produced which is certainly not favorable to the Prince President, and the uprising of handsome wife out with him, and a black In this country, the most common practice the people upon an attempt to assume a "new title," plainly hinted at by him, would try, took a great liking to her which he renot surprise as. A recent letter thus refers fused; and so the great black lord went

to the subject. "The speech of the President has been received by the French people with the utmost astonishment; and I shall be the echo it and let me go with him? I would have of a large number of the Parisians when I say that it was considered, on the whole as the greatest piece of impudence and boldness ever revealed to an assembly. Who But the next day she did not return, nor the could have belived that Louis Napoleon next, neither the next and so the man went would have said that after the 13th of June to look for her; and lo! he found her all 1848, it was equally easy for him to change the form of the government, but he would not do so? Was not General Changarnier at that epoch, the chief master and leader of France? Was he not the hero of the day? And what influence had Louis Napoleon? None. This is the only true question. Louis Napoleon threatens, that f the parties, by their attacks, endanger the welfare of the country, then, only then i might be reasonable to ask the people, for the repose of France for a new title calculated to fix irrevocably on my head the power with which it has invested me." Is not this clear and understandable? What is the ambition of Louis Napoleon? The tithe of an Emperor; and though he confesses that he will ask it of the nation, no one can farmer with lime upon various crops in all rely upon his assertion, and the people are sure that he will take it under the slightest pretext, and that this event will soon take place. When the President says, . We may preserve the Republic which threatens no one and may tranquilize all,' it is certain that he does not mean a word of what he says. In short this speech of Louis Napoleon has revived a great deal of hatred towards him, and will augment the number of his enemies. The opinion of all wise men is, that if he wished to follow a wise plan, and be satisfied with his title of President for ten years, the majority of the French people would frankly accept his actual position, and rank among his partizans; whilst his ambitious prospects are hurting the greatest part of the French people and are working against his safety and the tranquillity of France.'

### A Man Found Dead upon his Fect.

Last season an eccentric man, 50 or 60 years old, an Englishman, who had served holes he said were for witnesses. He sup-Use of Lime with Peat.-The slow de- plied himself, before winter, with abundance her vegetable substance.

They went to the door found it fastened, and the snow untrouden, that had fallen a bowl of frozen water, and near by a plate his pockets, two or three dollars in silver .-His bedding was very little; but then, he could not have frozen to death. He had evidently been dead for some weeks, and propably being sick and unable to get upon is bed, unaided, died in making the attempt. His effects were taken charge of by the Judge of Probate, and will be duly administered upon. His body was taken to St. Paul, and being thawed out in warm water, was straightened, laid in a coffin and decentworld there beats the heart of some one who would if there present have knelt down in sorrow and wept tears of affection and anguish upon the last remains of the strange man-John Stean,-Pionecr, April 11th.

Manuring Corn. H. Jones Brooke communicates to the Farm Journal an experiment in applying manure of "pondrette," which costs 30 cts. per bushel to a patch of corn planted in a piece of poor soil. He put about a gill in a hill dropped the corn thereon, and found the following result in the harvest: -On the first four rows, manured he had twenty baskets full of well matured corn; on the ster, instinct with life and power, crushing first four without manure fourteen basket of inferior corn; on the third four rows, manovhirlwind with its blasting breath as it ured, nineteen; on the next four rows, not sweeps along. Is there anything in the manured, fourteen baskets same quality as world which impresses the mind with a before, and so throughout, which shows profounder sense of resistless power than the great advantage of manuring corn in

A Yankee traveller in England tells the following story of a wheelwright, whom he met in a provincial town: The tender-hearted wheelwright, could hardly believe that was really born and brought up in America. He never thought any foreigners could learn to speak the language so well. He too was rather favorably struck with the idea of going to America when I answered his inquiries with regard to me-chanics' wages. He was very cautious, however, and cross-questioned me a long time about the cost of every thing there the passage, the great heat of the climate, the price of beer; and at length, touching his particular weakness he desired to be told candidly how it would be if he should marry before he went. If he should get a wife, a real handsome one, would it be safe for him to take her there? He had it was true or not-of a man who took a man, that was a great rich lord in our counaway very wroth and vexed. When he was gone, the woman upbraided her husit and let me go with him? I would have returned to thee to-morrow." Then the man followed after the black lord, and sold his wife to him for ten thousand nounds .next, neither the next and so the man went dressed up in silk and satin, 'lighting from a coach, and footmen waiting upon her .--So he says to her, "Why didst-thee not re-turn next day?" "Dost take me for a fool goodman?" quoth she, and stepped back into her fine coach and drove off; and so he lost his handsome wife.

### Mystery of the American Lakes.

Lake Erie is only 60 or 70 feet deep, but the bottom of Lake Ontario, which is 452 feet deep, is 230 feet below the tide-level of the ocean, or as low as most parts of the Gulf of St. Lawrence; and the bottoms of Lakes Huron, Michigan, and Superior, although their surface is on a level with the bottom of Lake Ontario. Now, as the discharge through the river Detroit, after allowing for the full propable portion carried off by evaporation, does not appear by any means equal to the quantity of water which the three upper great lakes receive, it has been conjectured that a subterranean river may run from Lake Superior to Huron, and from Huron to Lake Ontario. This conjecture is by no means improbable, and accounts for the singular fact that salmon and herring are caught in all the lakes communicating with the St. Lawrence, but in no others. As the Falls of Niagara must have always existed, it would puzzle the naturalists to say how these fish got into the upper lakes without some such subterranean river; moreover, any periodical obstruction of this river would furnish a not improbable solution of the mysterious flux and reflux of the lakes.

Another Scientific Wonder .- Pepsin? an artificial Digestive Fluid Gastric Juice. A great Dyspepsia Curer, prepared from Rennet, or the fourth stomach of the Ox, after directions of Baron Liebig, the great Physiological Chemist, by J. S. Houghton, M. D., No. 11, North Eight Street, Philadelphia, Pa. This is a truly wonderful remedy for Indigestion, Dyspepsia, Jaundice, Liver Complaint, Constipation, and Debilty, curing after Nature's own method by Nature's own agent, the Gastric Juice, See advertisement in another column.

## AMERICAN HOTEL,
