A Fine Establishment .- One day last week store of C. F. Wol on Hamilton street, and becoming somewhat in terested in the process and machinery employee in manufacturing cutlery, were shown over the establishment. Mr. Wolfertz, in connection with his store, is engaged more particularly in the manufacture of pocket-knives, scissors, and the various articles of table cutlery. The steel used is of European importation, and from this the es and springs are forged in a rough state, and then ground and polished. The handles ar manufactured from horn, which is first cut into the required length and width and then straight and smoothed. The grindstones used are of three qualities, and they, also, are imported from Europe. There are, however, a few stones found in America which can be used for the purpose, but, as a general thing, they are not support be as good as those brought from England, no having the peculiar "grit" necessary for this kine

of grinding. The business of Mr. Wolfertz has increased to such an extent recently that the power previously used was found to be inadequate to supply the de-mand for the goods manufactured by him, and about a month ago a water wheel was placed in quired to turn the numerous grindstones and lather ecessary for the proper completion of the work. The wheel in a turbine, and is moved by a on inch stream furnished through a tube con with the main pipe on the street. The wheel when going at the ordinary rate of speed makes 1800 revolutions per minute, and thus far has given the utmost satisfaction.

All the goods manufactured at this establish ment are warranted to be of the best quality, and are in every respect equal to the finest article er in this country or in Europe. To those fastidious persons who have a weakness for goods of foreign manufacture we recommend them to make a trial purchase at this home establishnent, and they have our assurance that the articles will compare favarably with any of the kind they have heretofore bought.

DISTRESSING ACCIDENT. - On Saturday week Joseph Douglass, son of Geo. Douglass, employed in a rolling mill, aged about twelve years, with a younger sister, started from home to take the 3 P. M. train for Allentown. In crossing the canal bridge they met a team coming to this side. Becoming bewildered, the little fellow dropped his sister's hand and rushed through the dividing timbers, on the Railroad track. Just then the Loconotive Octoraro with a heary train of loaded ore cars passed over the bridge, and in an instant little Josle was knocked down and run over by the locomotive and five of the loaded cars; his body was nearly severed in two, and, of course, death was instantaneous. His little sister endeavored to follow him, but was caught by some passer-by and placed out of danger.—Catasauqua Journal. COURT PROCEEDINGS .- The following bus-

> COAL-The strike in the coal regions has compelled many of the works in the Lehigh iron region to use bluminous coal. Steam can be enerated quickly by it and its successful use will have a tendency to influence these collusions be the workmen and operators. The Miners' Journal says when the suspension commenced in Schuylkill county, the surplus of coal in the market over the supply of 1868 to that date, was 712,732 tons. It is now short of last year's supply 368,924 tons, making a decrease of 1,181,656 tons. This will be increased to about 1,250,000 tons before the trade is fully under way again. It must be borne in mind that Schuylkill county will make up at least 500,000 tons of this decrease in July and August, the period during which the trade was largly suspended last year in Schuylkill county, owing to the to encounter for the balance of the season, there will be an ample supply of coal thrown into the market for the balance of the year at fair prices, even if the Delaware and Lackawana and Delas ware and Hudson companies should remain suspended for the greater part or the whole of the sea-

in that gentleman, in account of which we have been so accessful in sugar beet. As the soil is a sandy loam, closely akin to that in which the French have been so successful in sugar beet. culture, Col. Patterson knows no reason why a profit cannot be realized in this country in the same direction. The test of this steam plow was made in the presence of a considerable congregation of people, including General Capron, of the United States Agricultural Bureau at Washington. This gentleman, having beaten his sword into a plowshare, has from the first taken active interest in the subject of relieving horses from this arduous and exhausting labor-Through his intervention the apparatus, which cost \$13,000, was admitted free of duty, and at its successful operation on Tuesday they stood, the space to be plowed are two steam engines upon wheels. On the trial on Tuesday they stood, three hundred yards apart. The plow has six shares. It is a distinct piece of mechanism, and is fastened to a steel-wire cable extending between the two locomotives across the ground to be turned over. It is literally a shuttlecok between two shares. It is a distinct piece of mechanism, and is fastened to a steel-wire cable extending between the two locomotives across the ground to be turned over. It is literally a shuttlecock between two steam battle-dores. It moves at the speed of a hundred yards a minute, turning six furrows a foot cach in width, und eight inches in depth. Its average work, therefore, ist wenty acres per day. The locomotives are sung machines, capable of being applied to many useful purposes independent of duty as steam-plowers. A man rides on the plow as it crosses the soil. General Capron cessayed a trip or two, guiding the machine like an expert upon a velocipede. One of the experts who mounted it just after him had less good fortune. One of the diggers struck a buried boulder. When an irresistible body in motion strikes against an immovable one a runpus must be the result. In this case the man upon the inachine was slung high into the air. The concussion broke off two of the teeth of the digger, but as new ones immediately replaced them, the accident was a matter of fittle consequence. Of this large tract of ground much is virgin soil. The trunks of many cedars, showing slight evidences of decay, were brought to light by the steam plowshares. These were crunched up by them as if they were mere touchwood. The soil above them is largely made up of decayed vegetable matter, and in the opinion of all who were present the sugar beat will produce in it enormous crops. A digging machine accompanies the plow, intended for use in soils where roots and stones are obstacles to the course of the plowshare. Peters, of New York; M. B. Rhodes, of Baltimore; Mr. Harry McCall, and a strong delegation of gentlemen from various parts of the surrouding country. The unachiery is the work of Towles & Co., of Leeds, England. To work it costs extremly little. Anything answers as fuel, and at the rate of twenty acres a day a large estate is soon put under cuitivation. The locomotives are then ready, for ordinary duty as steam englies,
