Agriculture.

SUPERPHOSPHATE OF LIME. Now that crops of all kinds are unusu ally valuable to the producer, how to prepare bones for immediate use and consumption by growing plants is a matter of interest to thousands. We know of no better way, where one can obtain oil of vitriol, than that described below by Thomas Sim, of Libertytown, Md., in the Farm Journ-

"In the preparation of the soluble phosphate of lime, a state in which it always exists in nature, these facts seem clearly established : The first is, that one third of sulphuric acid, known as the oil of vitriol, of proper specific gravity is needed. The second fact is that this acid should be diluted with three times its bulk of water, otherwise it will clear and not dissolve the bone. The third is, that the finer bones are ground or chrushed, the more readily and perfectly will the compound be found. These facts being settled, the lamented Norton, Dr. Higgins, our own State Chemist, and some others, direct that acid, as above diluted, should be added to the bones by degrees, agitating the mass frequently from ten days to two weeks, at the expiration of which time the compound would be ready for use. As this is a todious and laborious process, I have sought to supply its place by another and less objectionable one, and have succeeded in a manner which I shall now give, and which, as you will see, is so simple as to be accessible to

, "I procure tubs of capacity and number to suit the amount of superphosphate I wish to prepare, common meat tubs answering the purpose perfectly well. Into these I place my bones carefully moistening them with water as I fill up the tubs, in which condition I permit them to remain twenty four hours, at the expiration of which time I find them heated to a high degree, which facilitates the action of the In ALL ITE BRANCHS.
IN ALL acid upon them. I now dilute the acid in a seperate vessel; and after the heat

Scrofula, or King's Evil,

SCROIULA, OF KING'S EVIL, is a constitutional disease, a corruption of the blood, by which this fluid becomes vitiated, weak, and poor. Being in the circulation, it in disease on any part of it. No organ is free from its attack, nor is there one which it may not destroy. The scrofulous taint is variously caused by mercurial disease, low living, dis-ordered or unhealthy food, impure air, filth and filthy habits, the depressing vices, and, above all, by the venercal infection. What-ever be its origin, it is hereditary in the con-stitution, descending "from parents to children unto the third and fourth generation," indeed, it seems to be the rod, of Him who says, "I will visit the iniquities of the fathers upon their eddren."

their children." Its effects commence by deposition from the blood of corrupt or ulcerous matter, which, in the lungs, liver, and internal organs, is termed tubercles; in the glands, swellings; and on tubereles; in the glands, swellings; and on the surface, cruptions or sores. This foul cor-ruption, which genders in the blood, depresses the energies of life, so that scrofulous constitu-tions not only suffer from scrofulous constitu-blaints, but they have far less power to with-stand the attacks of other diseases; conse-quently, vast numbers perish by disorders which, although not scrofulous in their nature, are still rendered fatal by this taint in the system. Most of the consumption which de-cimates the human family has its origin directly in this scrofulous contanination; and many destructive diseases of the liver, kidneys, brain, and, indeed, of all the organs, arise from or are aggravated by the same cause. One quarter of all our people are scrofulous;

are aggravated by the same cause. One quarter of all our people are scrofulous; their persons are invaled by this lurking in-fection, and their health is undermined by it. To cleanse it from the system we must renovate the blood by an alterative medicine, and in-vigorate it by healthy food and exercise. Such a medicine we supply in

Life Pills and Phoenix Bitters.

"The supherphosphate of lime is held by intelligent and judicious farmers, both in Europe and America, to be one of the most valuable fertilizers, and when suitably applied is capable of producing the most astounding results. To the American farmer it is easily accessible, and perfectly available, at comparatively low cost. From my own experience in its use, I am warranted in saying that it will repay its cost more than three fold when judiciously used."

TO PREVENT FLIES FROM TEAS-ING HORSES.

Take two or three small handfuls of walnut leaves, upon which pour two or three quarts of soft cold water; let it infuse one night, and pour the whole next morning into a kettle, and let it boil for fifteen minutes. When cold it will be fit for use. No more is required than to wet a sponge, and before the horse goes out of the stable, let those parts which are most irrated be smeared over with the liquor.

TO DESTROY ANTS IN A GARDEN.

Boil in one gallon of rain water one pound black soap and a half pound sulphur, and saturate the ground where the ants are with it; it is said to have the best effects, but we have not used it. When food is scarce, they injure flowers in getting at the honey.

HARD BUTTER WITHOUT ICE .-- To have delightful hard butter in summer with out ice, the plan recommended by the Scientific American is a good one. Put a trivit, or any open flat thing with logs, in a saucer ; put on this trivit the plate of butter : fill the saucer with water ; turn a common flower pot upside down over the butter, so that its edge shall be within the saucer and under the water. Stop up the whole of the flower-pot with water, set in a cool place until morning ; or if done at breakfast, the butter will be very hard by BETTER Sugars at 10cts. per lb. than supper time.

rywhere, in selling the above work, our inducement to all such being very liberal. For single copies of the book, or for terms to agents, with other information, apply to er address JOHN E.
