STARTING EARLY POTATOES.

A crop of potatoes ready for the table early in June, may be secured without greattrouble. If seed potatoes are brought into a warm room about the first of March, the eyes will start rapidly, the nourishment in the tabers will sustain them for One Dollar and Fifty Cents per Day. The tables and remains the first of March, the content of the content of the content of the content of the provided for. It is entraily located in the business part of the city, and is continuous to the principal hase of stemahouts, cars, omnibuses a terries, e.e., for consequence of the pressure caused by the flatbeth of the content of the provided for the content of the provided for.

This content of the content of the content of the content of the provided for.

The content of the content of the content of the content of the provided for.

The content of the content of the content of the provided for the content of the provided for.

This content of the content of the content of the content of the provided for the content of the two or three weeks, by which time they the season, and is equal to that or any other hotel in a may easly be planted out in some favorable spot. Of course care must be taken in The man before a must be taken in the man before represented for a point of spot. Of course care must be taken in planting out not to break the sprouts. Or the tubers may be planted in a hot bed of the tubers may be planted in a hot bed of Feb. 15, 1802. moderate temperature, about the middle of the month. Cut them in halves, lay them Zat" side down, as thick as they can be placed, and cover with about two inches of Was awarded the Prize Medal for his superiority over all earth. They may be transplanted when states for his improvements two or three inches high. They should be removed carefully, seperating the roots with as little injure as posible. They will not be likely a full crop under this treatment, and may therefore be planted more closely, say in drills thirty inches apart, and twelve inches sport in the drills. Another meteod is to put pieces of pota-

toe in small squares of turf, set them close together in a warm place where they can be watered readily. On cold nights protest them with straw. When large enough they can be set out turf and all, without disturbing the roots. This might not pay on a large scale, but enough may thus be brought forward for a family supply, until the main crop is mature enough to draw
